

Experimental Agriculture

Experimental Agriculture publishes the results of analytical research into the agronomy of crops, particularly the food, forage and industrial crops of the warmer regions of the earth. International in scope, it is especially concerned with experimental work conducted in the field and is designed to explain agronomic results in biological and environmental terms. The journal publishes accounts of new methods of agricultural crop production and discussions of problems arising from the rapid expansion of agricultural production. Particular emphasis is placed on papers covering farming systems and sustainability in tropical regions. There are also regular book reviews.

The British Journal of Nutrition

"Recommended for academies or special libraries supporting programmes in nutrition research."

Magazines for Libraries

Editor: K N FRAYN (Chairman)
Published for The Nutrition Society

Aims

The advancement of the scientific study of nutrition and its application to the maintenance of human and animal health are the prime objectives of *The British Journal of Nutrition* in the 1990s.

Now monthly

Now published twelve times a year, each issue contains original research on both human and animal nutrition. Papers are relevant to clinical and human nutrition, and the nutritional sciences as a whole and topics have included: food and nutrition intakes of population; planning of diets; information technology; control of feed intake in farm animals and other animal species; measurement of body composition; diet and hormonal influences on growth; nutritional metabolism; and modelling of intestinal flows. *The British Journal of Nutrition* publishes research papers that aim to advance nutritional concepts and to

contribute to the development of the nutritional sciences. They also provide the information needed to make rational decisions on practical nutritional questions.

International coverage

Authors and readers come from all over the world. Each issue contains an editorial comment which highlights topics of scientific interest in the journal and discusses current developments in nutrition.

Features

The British Journal of Nutrition offers...

- Wide subject coverage
- High standard of refereeing
- Rapid publication of research papers
- Editorial comment
- Letter to the Editors

Subscription

Volumes 75-76 in 1996: monthly £310;
airmail £44 per year extra. ISSN 0007-1145

DIRECTIONS TO CONTRIBUTORS

NOTE

Full Directions to Contributors, of which this is a summary, appear in the first (February) issue of each volume.

GENERAL

The Journal of Dairy Research publishes reports on all aspects of dairy science from any country. Material for publication should be sent to the Editor: Dr B. A. Rolls, AFRC Institute of Food Research, Earley Gate, Whiteknights Road, Reading RG6 6BZ, UK. Receipt of all material will be acknowledged. Submission of a paper will be taken to imply that it reports original unpublished work, that it is not under consideration elsewhere, and that if accepted by the *Journal* it will not be published elsewhere in any language without the consent of the Editors. Authors of accepted articles will be asked to assign their copyright, under certain conditions, to the *Journal*.

FORM OF PAPERS

Papers should be written in English using the spelling of the *Concise Oxford Dictionary* and should as far as possible be comprehensible to the non-specialist reader. They should be concise, but without omitting necessary material, and contain sufficient detail to allow repetition of the work.

Papers should be typed with wide margins on one side of A4 or quarto paper, double spaced throughout including References, Figure legends and Table headings and footnotes. Submit a top copy and two good copies, packed flat. A single copy will be accepted from outside Europe.

Authors should consult a recent issue of the *Journal of Dairy Research* to familiarize themselves with Journal conventions and layout. Attention to these and other details will speed publication.

LAYOUT OF PAPERS

The paper should generally be divided as follows. (a) *Cover sheet* with the title of the article, names of authors each with one forename, together with their affiliations, a shortened version of the title suitable as a heading, and the name and address for correspondence. (b) A brief *Summary* should encapsulate the whole paper, showing clearly the new knowledge acquired. (c) The introduction, without heading, should not contain a full literature review, but should indicate why the subject of enquiry is interesting or important, and why the authors have chosen the approach described. (d) The *Experimental or Materials and Methods* section should contain adequate descriptions of procedures or appropriate references; sources of all materials (including address with post code) and sources or strains of animals, microorganisms and so on should be indicated. (e) *Results* should be as concise as possible, without repetition or inclusion of irrelevant material. Tables and illustrations should be used efficiently. (f) The *Discussion* should not repeat the results but discuss their significance. Any acknowledgements are given in a separate paragraph without heading. It is the responsibility of the authors to ensure that individuals or organizations acknowledged as providing materials or otherwise are willing to be identified. (g) *References*. Note. For some types of paper, other divisions may be preferable.

REFERENCES

References should be given in the text as Brown & Jones (1987) or (Schmidt, 1985; Nakamura *et al.* 1989); the first author with

et al. is used for papers with three or more authors. Where necessary, papers are distinguished as Lenoir (1988*a*), (Litov *et al.* 1990*a, b*). When several references appear together in the text, cite them in chronological order, and alphabetically within years. The Reference list at the end of the paper, which should begin on a fresh page, is given in strict alphabetical order. Authors should refer to a recent issue for the format of references.

TABLES

Tables should be numbered and carry headings enabling them to be understood without reference to the text. Each Table should be typed on a separate sheet, but their approximate position in the text should be indicated. Symbols for footnotes should be in the order †, ‡, §, ||, ¶, ††, etc. The use of *, **, etc, should be limited to indicating levels of significance.

ILLUSTRATIONS

Line drawings and photographs, which must be originals, should be numbered as Figures in Arabic numerals. Drawings should each be on a separate sheet, not larger overall than those on which the paper is typed, and packed flat. Curves or lines should not extend beyond the experimental points, which should be indicated, symbols used being, in order: ○, ●, △, ▲, □, ■, ×, +. Final lettering is done at the Press, so *there must be no letters or numerals on the drawing or photograph itself*. Their positions should be indicated either on a copy of the Figure, or on a translucent flyleaf firmly attached to the figure. Each Figure should be provided with a legend such that with the Figure it is comprehensible without reference to the text. Figure legends should be typed on a separate sheet or sheets.

Photographs should be glossy black and white prints accompanied by a legend as above. Scale bars on the photograph should be used, not magnifications in the legend. Only one copy of each illustration is required, but authors should ensure that photocopies provided with the other copies of the paper are of adequate quality to allow referees to judge their value.

STATISTICAL TREATMENT

Individual results should not normally be given. The methods of statistical analysis should be clearly described; a suitable reference is adequate. Authors should make it clear whether they are quoting (e.g.) SD or SE. Any statement that two groups of values are different should be supported by the level of significance involved, as a single or range of *P* value: (*P* = 0.008) or (*P* < 0.01). Differences should not be claimed or implied if *P* > 0.05.

ETHICS OF EXPERIMENTS

Authors are expected to adhere to the relevant codes covering human subjects and the use of animals.

PROOFS

Authors will be advised when to expect proofs, which should be returned without delay to Mrs B. Gillian Day, AFRC Institute of Food Research, Earley Gate, Whiteknights Road, Reading RG6 6BZ, UK. Proofs are sent for the correction of any printer's or editorial errors, not for addition of new material or revision of the text. Excessive alteration may have to be disallowed or made at the authors' expense, and may delay publication. Order forms for offprints are sent with proofs and should be returned directly to The University Press, Cambridge.

PP3 component of bovine milk: a phosphorylated whey glycoprotein

J.-M. GIRARDET and G. LINDEN

333–350

JOURNAL OF DAIRY RESEARCH

Volume 63 Number 2 May 1996

CONTENTS

Original articles	Pages
Teat thickness changes may provide biological test for effective pulsation J. HAMANN and G. A. MEIN	179-189
Milk yield, oxytocin and β -endorphin gradually normalize during repeated milking in unfamiliar surroundings R. M. BRUCKMAIER, H.-U. PFEILSTICKER and J. W. BLUM	191-200
Simultaneous recording of oxytocin release, milk ejection and milk flow during milking of dairy cows with and without prestimulation R. M. BRUCKMAIER and J. W. BLUM	201-208
Leucine and protein metabolism in the lactating dairy cow mammary gland: responses to supplemental dietary crude protein intake B. J. BEQUETTE, J. A. METCALF, D. WRAY-CAHEN, F. R. C. BACKWELL, J. D. SUTTON, M. A. LOMAX, J. C. MACRAE and G. E. LOBLEY	209-222
Application of numerical analysis to a number of models for chymosin-induced coagulation of casein micelles D. B. HYSLOP and K. B. QVIST	223-232
Iron-supplemented caseins: preparation, physicochemical characterization and stability F. GAUCHERON, M.-H. FAMELART and Y. LE GRAËT	233-243
Detection and localization of peptidases in <i>Lactococcus lactis</i> with monoclonal antibodies H. LAAN, R. E. HAVERKORT, L. DE LEIJ and W. N. KONINGS	245-256
Immunomodulatory activities of whey fractions in efferent prefemoral lymph of sheep C. W. WONG, G. O. REGESTER, G. L. FRANCIS and D. L. WATSON	257-267
Effects of somatic cell count and stage of lactation on raw milk composition and the yield and quality of Cheddar cheese M. J. AULDIST, S. COATS, B. J. SUTHERLAND, J. J. MAYES, G. H. McDOWELL and G. L. RODGERS	269-280
Milk protein standardization by ultrafiltration for Cheddar cheese manufacture T. P. GUINEE, D. J. O'CALLAGHAN, E. O. MULHOLLAND and D. HARRINGTON	281-293
Survival and residual activity of <i>Lactobacillus acidophilus</i> frozen cultures under different conditions R. FOSCHINO, E. FIORI and A. GALLI	295-303
Short communications	
Cortisol and regulation of tight junctions in the mammary gland of the late-pregnant goat G. E. THOMPSON	305-308
Recommended method for measuring changes in thickness of the bovine teat with spring-loaded calipers J. HAMANN, G. A. MEIN and B. NIPP	309-313
Non-Newtonian behaviour of whey protein solutions M. R. ALIZADEHFARD and D. E. WILEY	315-320
Carbon dioxide fixation by cells and cell-free extracts of <i>Streptococcus thermophilus</i> H. LOUAILÈCHE, P. BRACQUART, C. GUIMONT and G. LINDEN	321-325
