

ESSENTIAL READING FROM CAMBRIDGE

Photodissociation Dynamics

Reinhard Schinke
*Cambridge Monographs on Atomic,
Molecular and Chemical Physics 1*
1993 400 pp.
38368-4 Hardcover \$89.95

The Ideas of Particle Physics

An Introduction for Scientists
Second Edition
G.D. Coughlan and J.E. Dodd
1991 256 pp.
38506-7 Hardcover \$64.95
38677-2 Paper \$29.95

Statistics for Nuclear and Particle Physicists

L. Lyons
1989 240 pp. 37934-2 Paper \$29.95

Diffraction Effect in Semiclassical Scattering

H.M. Nussenzveig
*Montroll Memorial Lecture Series in
Mathematical Physics 1*
1992 251 pp.
38318-8 Hardcover \$59.95

Particle Field Holography

Chandra S. Vikram
*Cambridge Studies in Modern
Optics 11*
1992 280 pp.
41127-0 Hardcover \$79.95

Quantum Measurement

*V.B. Braginsky and
F. Ya. Khalili*
1992 205 pp.
41928-X Hardcover \$39.95

Newton to Einstein: The Trail of Light

An Excursion to the Wave-Particle
Duality and the Special Theory of
Relativity
Ralph Baierlein
1992 345 pp.
41171-8 Hardcover \$34.95

Ultrafast Fiber Switching Devices and Systems

Mohammed Islam
*Cambridge Studies in Modern
Optics 12*
1992 224 pp.
43191-3 Hardcover \$49.95

Available in bookstores or from

CAMBRIDGE

40 West 20th Street,
New York, NY 10011-4211
Call toll free 800-872-7423.
MasterCard/VISA accepted.
Prices subject to change.

Information for Contributors

1. Manuscripts must be written in English. All manuscripts will be referred to acknowledged experts in the subject. Only those receiving favorable recommendations from the referees will be accepted for publication. Manuscripts may be sent to any Board member, any Associate Editor or the Editor.
2. Manuscripts should be double spaced, on one side of good grade paper, allowing a reasonable left-hand margin. An original and two copies should be submitted with the author's full postal address, phone and/or fax numbers, position, and affiliations. Authors are urged to send in their manuscripts on disks as well as on hard copy.
3. The title and section headings should highlight the significant points. A short abstract should precede the main text.
4. One copy of photographs, prints or transparencies of good quality and unmarked should be submitted. Where lines or lettering are to appear on the photograph, an additional print should be supplied appropriately marked. Each should have, lightly written on the back, the author's name, the figure number and an indication of which is the top of the picture.
5. One copy of each line diagram should be submitted at approximately twice final size and unlettered. Diagrams must be drawn in indian ink on plain white or transparent paper. A second copy should be supplied with lettering included. The author's name and the figure number should be written on this copy.
6. Tables should be typewritten on separate sheets. Avoid, where possible, very wide tables.
7. References and footnotes should be cited according to the Harvard (Author/date) system, also known as the "British form". In the text, author and year are cited in parentheses e.g. "... was found by McCarthy (1980, 1980a)..." or "(Emmett *et al.* 1972)". Full references are listed in alphabetic order at the end of the paper. References are not numbered. An example of a reference list is:

DEUTSCH, C. & KLARFELD, S. 1973 *Phys. Rev.* **A7**, 2081.
NICHOLSON, D. R. 1983 *Plasma Theory* (John Wiley, New York).
OOMURA, H. *et al.* 1982 *Res. Rep ILE*, ILE-8207p.
OOMURA, H. *et al.* 1982a *Trans. Ans* **43**, 617.

Note that the year of publication appears after the author's name. If possible, all authors names should be listed in preference to "*et al.*" If one author or team is referred to more than once in any year, the letters a, b, etc should be added after the year to distinguish the individual references.
8. Correction to proofs should be restricted to printers' errors only. Authors are entitled to 25 offprints of their article free of charge. Additional offprints may be purchased if they are ordered on the form sent with the proofs.

LASER AND PARTICLE BEAMS

Pulse Power and High Energy Densities

Volume 12, Number 2, 1994

McCrorry Special Issue

Preface 121

Editor's Comments 123

Gregory A. Moses and Robert R. Peterson (Fusion Technology Inst., Madison, WI, USA): Computer modeling of ICF target chamber phenomena 125

R.P.J. Town, B.J. Jones, J.D. Findlay, and A.R. Bell (Blackett Laboratory, London, UK): Three-dimensional simulations of the Rayleigh–Taylor instability during the deceleration phase 163

E.G. Gamaly (The Australia National Univ., Canberra, Australia): Ultrashort powerful laser matter interaction: Physical problems, models, and computations 185

G.J. Pert (Univ. of York, Heslington, York, UK): Computational modeling for X-ray lasers 209

K. Eidmann (Max-Planck-Inst., Garching, Germany): Radiation transport and atomic physics modeling in high-energy-density laser-produced plasmas 223

R.M. More (Lawrence Livermore National Lab., Livermore, CA, USA): Semi-classical calculation of atomic processes and numerical simulation of dense plasmas 245

E.M. Epperlein (Univ. of Rochester, Rochester, NY, USA): Fokker–Planck modeling of electron transport in laser-produced plasmas 257

Glenn Joyce, Jonathan Krall, and Steven Slinker (Naval Research Lab., Washington, DC, USA): ELBA (electron beams in accelerators) particle simulation code 273

J.P. Quintenz, D.B. Seidel, M.L. Kiefer, T.D. Pointon, R.S. Coats, S.E. Rosenthal, T.A. Mehlhorn, M.P. Desjarlais, and N.A. Krall (Sandia National Lab., Albuquerque, NM, USA): Simulation codes for light-ion diode modeling 283
