## The New LYNXEYE XE

### High-Speed Energy-Dispersive Detector for X-ray Diffraction

The LYNXEYE XE is the first high-speed energy-dispersive one-dimensional detector for ultra-fast X-ray diffraction measurements. It enables high-speed data acquisition up to 450 times faster than conventional point detector systems with a superb energy resolution making K $\beta$  filters and secondary monochromators redundant. Operating with all common characteristic X-ray emission lines (Cr, Co, Cu, Mo, and Ag radiation) it enables outstanding angular resolution (FWHM) and perfect line profile shapes.
