

## Notes for contributors

A submission to Applied Probability is considered as a submission to either *Journal of Applied Probability* (JAP) or *Advances in Applied Probability* (AAP). Longer papers are typically published in AAP, but the assignment of papers between the two journals is made by the Executive Editor on an issue-by-issue basis. Short communications and letters specifically relating to papers appearing in either JAP or AAP are published in JAP.

Papers submitted to the Applied Probability journals are considered on the understanding that they have not been published previously and are not under consideration by another publication. Accepted papers will not be published elsewhere without the written permission of the Trust. Submitted papers should be in English. It is the author's responsibility to ensure an acceptable standard of language, and a paper failing to meet this requirement may go back to the author for rewriting before being sent out for review.

Papers should include: (i) a **short abstract** of 4–10 lines giving a non-mathematical description of the subject matter and results; (ii) a list of **keywords** detailing the contents; and (iii) a list of **classifications**, using the 2010 Mathematics Subject Classification scheme (<http://www.ams.org/msc/>). Letters to the Editor need not include these. To assist authors in writing papers in the Applied Probability style, they may use the L<sup>A</sup>T<sub>E</sub>X class file `aptpub.cls`, available from <http://www.appliedprobability.org/>. Use of this class file is not a condition of submission, but will considerably increase the speed at which papers are processed.

Papers should be submitted electronically through ScholarOne at <https://mc.manuscriptcentral.com/apjournals>. All submissions will be acknowledged on receipt.

## Copyright

The copyright of all published papers is vested in the Applied Probability Trust. When a paper is accepted for publication, the Trust asks the authors to assign copyright by signing a form in which the terms of copyright are listed. Failure to do this promptly may delay or prevent publication.

Authorisation to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by the Applied Probability Trust for libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the corresponding processing and royalty fees (see <http://www.copyright.com>) are paid directly to CCC, 222 Rosewood Drive, Danvers, MA 01923, USA. 0021–9002/19

## Volume 58 Number 2

### *Research Papers*

- 289 RUHUL ALI KHAN, DH RUBASISH BHATTACHARYYA AND MURARI MITRA. On classes of life distributions based on the mean time to failure function
- 314 MAN-WAI HO, LANCELOT F. JAMES AND JOHN W. LAU. Gibbs partitions, Riemann–Liouville fractional operators, Mittag–Leffler functions, and fragmentations derived from stable subordinators
- 335 MACKENZIE SIMPER. Random additions in urns of integers
- 347 YAN QU, ANGELOS DASSIOS AND HONGBIAO ZHAO. Exact simulation of Ornstein–Uhlenbeck tempered stable processes
- 372 H. M. JANSEN. Weak convergence of stochastic integrals with respect to the state occupation measure of a Markov chain
- 394 YVES MOCQUARD, FRÉDÉRIQUE ROBIN, BRUNO SÉRICOLA AND EMMANUELLE ANCEAUME. Stochastic analysis of average-based distributed algorithms
- 411 KRZYSZTOF BISEWSKI, KRZYSZTOF DĘBICKI AND MICHEL MANDJES. Bounds for expected supremum of fractional Brownian motion with drift
- 428 THIRUPATHAIAH VASANTAM AND RAVI R. MAZUMDAR. Sensitivity of mean-field fluctuations in Erlang loss models with randomized routing
- 449 PASCAL MOYAL ANA BUŠIĆ AND JEAN MAIRESSE. A product form for the general stochastic matching model
- 469 JESPER MØLLER AND ELIZA O’REILLY. Couplings for determinantal point processes and their reduced Palm distributions with a view to quantifying repulsiveness
- 484 KERRY FENDICK AND WARD WHITT. Queues with path-dependent arrival processes
- 505 ZHENZHONG ZHANG, JINYING TONG, QINGTING MENG AND YOU LIANG. Population dynamics driven by truncated stable processes with Markovian switching
- 523 XIN GUO AND YONGHUI HUANG. Risk-sensitive average continuous-time Markov decision processes with unbounded transition and cost rates
- 551 CHUANCUN YIN. Stochastic orderings of multivariate elliptical distributions
