#### COVER PHOTO

View of the Lake Igaliku and managed surrounding fields, 61°00'24"N, 45°26'30"W, south Greenland. The lake sediment record appears as a memory of land use and environmental change through time. Its study allows for a longterm insight into anthropogenic impacts on ecosystems, from the Norse colonisation and medieval agro-pastoralism to the modern farming activities (photo V. Bichet). See the article by Bichet and others in the present issue.
