# The Journal of Laryngology and Otology

(Founded in 1887 by MORELL MACKENZIE and NORRIS WOLFENDEN)

EDITED BY

WALTER HOWARTH

ASSISTED BY

V. E. NEGUS AND F. W. WATKYN-THOMAS

1. Original Articles are accepted on the condition that they have not been published elsewhere.
2. Manuscripts should be typewritten, on one side only of the paper, and well spaced.
3. Galley proofs and engraver's proofs of illustrations are sent to the author. Corrections, which should be kept to a minimum, must be clearly marked and no additional matter added.
4. Orders for reprints should be sent when returning galley proofs, and for this purpose special forms are supplied, on which the price of the reprints is stated.
5. Authors of Original Communications on Oto-Laryngology in other Journals are invited to send a copy, or two reprints, to the *Journal of Laryngology*. If they are willing, at the same time, to submit their own abstract (in English, French, Italian, or German) it will be welcomed.
6. Editorial Communications may be addressed to THE EDITOR, *Journal of Laryngology*, c/o HEADLEY BROTHERS, 109 Kingsway, London, W.C.2.
7. The Annual Subscription commencing with the January issue is Forty Shillings, post free, and is payable in advance.
8. Single copies, both of the present and the previous series, are on sale at Four Shillings each.
9. All Subscriptions, advertising and business communications should be sent to the Publishers, HEADLEY BROTHERS, 109 Kingsway, London, W.C.2.

*United States of America*

Orders for this Journal, for single parts or yearly subscriptions, may be sent either through a local bookseller, or to Messrs. G. E. STECHERT & CO., 31-33 East 10th Street, New York.

# Rheumatism—

both articular and non-articular—is helpfully treated with packs of Antiphlogistine Dressing, because of the prolonged moist heat which they supply and because of their analgesic and anodyne qualities.

The application of heat to a part and the induction of hyperaemia, tend to improve the general metabolism, promote absorption of the swellings in and around the joints and muscular fibres, and to reduce the thickness of the synovial sacs, so that morbid articulations assume a more normal shape.

Antiphlogistine Dressing is a valuable adjuvant in the treatment of rheumatic conditions, where the application and maintenance of moist heat is so helpful.

# GUY'S SILENT SUCTION APPARATUS

as made for

WM. MAYHEW MOLLISON, C.B.E., F.R.C.S.

“ An efficient *silent* suction apparatus is essential in many throat investigations and operations and indeed is used for many operations on other parts of the body.

“ The above illustration shows an Electric Suction Apparatus which can rightly claim to be more efficient than the apparatus generally in use. The suction is continuous and so powerful that clots of blood and the most tenacious mucus are quickly removed. The apparatus is quiet and can easily be moved about the operation theatre and from one theatre to another. It is possible to use it for intra-tracheal

insufflation at the same time as suction since the pump delivers sixty litres of air per minute. The valves in the cylinder head are strong and specially designed for silence in operation and the sump of the machine carries enough oil for six months' continuous use; this ensures efficiency with the minimum of attention. The entire unit is mounted in a robust mahogany case which is fitted with four rubber-tired castors. On the side of the case two large screw necked bottles are mounted. These bottles are the commercial “Kilner” type and can therefore be replaced with the minimum of expense. Blood and other fluids are removed from the operating field by the suction plant and find their way into the big bottle. The second bottle is a safety trap in the unlikely event of the first bottle becoming full at a moment when it is inconvenient to change it.

“ There are no resistances to regulate the speed and in order to use the apparatus it is only necessary to connect it to the main electrical supply.” The makers are Down Bros., Ltd., London.

THE  
DISPLACEMENT METHOD  
OF

SINUS DIAGNOSIS AND TREATMENT

*A Practical Guide to the Use of Radiopaques in the Nasal Sinuses,  
with 146 illustrations and a chart.*

By  
ARTHUR W. PROETZ, A.B., M.D.

THIS WORK  
WAS AWARDED  
THE  
CASSELBERRY  
PRIZE  
of the  
AMERICAN  
LARYNGOLOGICAL  
ASSOCIATION

This monograph is a complete study of sinus diagnosis by means of radiopaques, written in a comprehensive and highly practical manner. It embodies an atlas of twenty-five full-page radiograms, mapping the locations which the radiopaques occupy in every sinus, in each of five head positions. Detailed röntgenological data are included.

Adequate space is devoted to the details of treatment, and nineteen typical case records are appended, which are profusely illustrated for study and comparison.

No effort has been spared in making this book an exemplary volume. The röntgenograms are reproduced *in the negative*, from fine screen plates, faithfully rendering the shadow densities of the films as they are seen in the laboratory.

Octavo, xviii + 242 pages, cloth. Printed from new Cheltenham type upon excellent paper.

PRICE \$6.00 or £1 5s. Post Paid.
