August 2025

# Infection Control & Hospital Epidemiology

ICHE

## CONTENTS

### SHEA White Paper

- 773** Society for Healthcare Epidemiology of America (SHEA) infectious diseases fellow infection prevention and control and healthcare epidemiology curriculum  
*Elise M. Martin, Catherine Cichon, Rebecca Choudhury, Shandra R. Day, Yasaman Fatemi, Vera P. Luther, Terri Stillwell and Abby Sung*

### Original Articles

- 783** The association between the practice of oral care and the incidence of hospital-acquired pneumonia in intensive care medicine  
*Xiaoqiang Lv, Jun Yang, Li Wang, Li Tong and Fu Ding*
- 789** *Candida auris* outbreak in a cardiothoracic transplant intensive care unit: implications for infection prevention practices and keeping pace with an evolving landscape  
*Shardul N. Rathod, Grace Barajas, Brooks I. Mitchell, Michael Malczynski, W. Justin Moore, Erin Weslander, Christine Bulger, Andrea Stone, Abbas Al-Qamari, Christie M. Bertram, Sarah H. Sutton, Valentina Stosor, Chao Qi, Teresa R. Zembower and Maureen K. Bolon*
- 797** Whole-genome sequencing surveillance of vancomycin-resistant *Enterococcus faecium* (VRE) detects hospital outbreaks and identifies the postanesthesia care unit as a transmission locus  
*Sarah M. Schrader, Meghan A. Baker, Chanu Rhee, Michael Klompas, Samantha Taffner, Zachary Pearson, Jay Worley, Lynn Bry, Sanjat Kanjilal, Manfred Brigl and Nicole D. Pecora*
- 805** Evaluating the antibiotic spectrum index in a stewardship-focused clinical trial for childhood pneumonia  
*Sabrina E. Carro, Nicolas Gargurevich, Mert Sekmen, Srinivasan Suresh, Judith M. Martin and Derek J. Williams*
- 812** Modeling the impact of health care worker masking to reduce nosocomial SARS-CoV-2 transmission under varying adherence, prevalence, and transmission settings  
*Timothy D Whiteley, James Stimson, Colin S Brown, Julie V Robotham and Stephanie Evans*
- 819** Did universal masking during the COVID-19 pandemic reduce MRSA and MSSA acquisition in the NICU?  
*Meaghan Neary, Kathleen Quan, Thomas Tjoa, Cassiana E. Bittencourt, Susan S. Huang and Cherry Uy*
- 825** N95® filtering facepiece respirator contamination with SARS-CoV-2 following reuse and extended use  
*James S. Ford, Ralph C. Wang, Benjamin Stephenson, Nida F. Degesys, Jahan Fahimi, Edward M. Fisher, Delbert Harnish, Courtney M.C. Jones, Susan Peterson, Efrat Rosenthal, Richard Rothmann, Manish N. Shah, Vaishal Tolia, Anna Q. Yaffee, Katherine N. Yoon and Maria C. Raven for the ReuseN95 Group*
- 831** Comparative performance of sponge versus flocked swabs for culture-based and metagenomic detection of microbial contamination in the healthcare environment  
*Matthew J. Ziegler, Sean Loughrey, Selamawit Bekele, Elizabeth Huang, Pam Tolomeo, Michael Z. David, Ebbing Lautenbach, Laurel J. Glaser and Brendan J. Kelly*

- 837** Evaluation of swabbing methods for culture and non-culture-based recovery of multidrug-resistant organisms from environmental surfaces  
*Ahmed Babiker, Julia Van Riel, Sarah Lohsen, Alex Page, Amanda Strudwick, Eli Wilber, Michael Woodworth and Sarah Satola*

### Concise Communication

- 845** Epidemiologic validation of the National Healthcare Safety Network's updated *Clostridioides difficile* test method definition  
*Nicholas A. Turner, Barry Shelton, Becky A. Smith, Linda Crane, Polly Padgett, Linda Roach, Brittain Wood, Diana Alame and Deverick J. Anderson*
- 849** Visitation and universal masking impact to healthcare-associated respiratory viral infection rates in a freestanding children's hospital  
*Kellie Rusin, Samuel R. Dominguez, Kelly Pearce, Lori Silveira, Ann-Christine Nyquist and Sara R. Saporta-Keating*
- 852** Getting real *clean*: a virtual reality training pilot study for cleaning and low-level disinfection of portable medical equipment  
*Esteban A. Barreto, Michelle S. Jerry, Vianelly García, Chloe V. Green, Andrea S. Greenfield, Eileen F. Searle and Erica S. Shenoy*
- 855** Applying principles to practice: cleaning and disinfection of extended reality equipment used in healthcare settings  
*Thomas S. Murray, Erica S. Shenoy, Scott C. Roberts, Richard Martinello, Asher Marks, Kimberly Hieftje, Chloe V. Green, Joseph T. Rothschild, Morgan Shradar, Tess McKinney, Lindsey Jo Hand, Shannon Novosad and Janet Glowicz*

### Letter to the Editor

- 858** Do far ultraviolet-C light technologies increase ozone concentrations in healthcare facility patient rooms?  
*Samir Memic, Claire E. Kaple, Jennifer L. Cadnum and Curtis J. Donskey*

### Corrigendum

- 861** The impact of coronavirus disease 2019 (COVID-19) on healthcare-associated infections in 2020: A summary of data reported to the National Healthcare Safety Network – CORRIGENDUM  
*Lindsey M. Weiner-Lastinger, Vaishnavi Pattabiraman, Rebecca Y. Konnor, Prachi R. Patel, Emily Wong, Sunny Y. Xu, Brittany Smith, Jonathan R. Edwards and Margaret A. Dudeck*

*An Official Publication of the Society for Healthcare Epidemiology of America*

## EDITOR-IN-CHIEF

David P. Calfee, MD, MS • New York, NY, USA

## DEPUTY EDITOR

Tara N. Palmore, M.D., Washington, D.C.

*Infection Control & Hospital Epidemiology* (ISSN 0899-823X) is published monthly by Cambridge University Press, One Liberty Plaza, New York, NY 10006, USA. Printed by Sheridan, a CJK Group Company.

## Editorial Office

Communications should be addressed to the Editor, *Infection Control & Hospital Epidemiology*, One Liberty Plaza, New York, NY 10006 (email: iche.managingeditor@cambridge.org). Contributors should consult the Instructions for Contributors, which is available at the journal's Web site.

## Advertising

Please direct advertising inquiries to M. J. Mrvica Associates, 2 West Taunton Avenue, Berlin, NJ 08009 (e-mail: mjmrsvica@mrsvica.com; telephone: 856-768-9360, fax: 856-753-0064). Publication of an advertisement in *Infection Control & Hospital Epidemiology* does not imply endorsement of its claims by the Society for Healthcare Epidemiology of America, by the Editor, or by Cambridge University Press.

## Permissions

Articles may be copied or otherwise reused without permission only to the extent permitted by Sections 107 and 108 of the US Copyright Law. Permission to copy articles for personal, internal, classroom, or library use may be obtained from the Copyright Clearance Center (<http://www.copyright.com>,

email: info@copyright.com). For all other uses, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale, please contact Cambridge University Press. Full details may be found at: [www.cambridge.org/about-us/rights-permissions](http://www.cambridge.org/about-us/rights-permissions).

## Subscriptions

The individual subscription prices for 2025 are: Print & Online: \$381; Online Only: \$286. Individuals have the option to order directly from Cambridge University Press. Institutional print + electronic and e-only subscriptions are available from Cambridge University Press and include unlimited online access; rates are tiered according to an institution's type and research output and may be reviewed at the journal's homepage on Cambridge Core: [cambridge.org/ICHE](http://cambridge.org/ICHE).

Please direct subscription inquiries and requests for back issues to Customer Services at Cambridge University Press, e-mail: [subscriptions\\_newyork@cambridge.org](mailto:subscriptions_newyork@cambridge.org) (USA, Canada, and Mexico) or [journals@cambridge.org](mailto:journals@cambridge.org) (outside of USA, Canada, and Mexico).

**Postmaster:** Send address changes to *Infection Control & Hospital Epidemiology*, Cambridge University Press, One Liberty Plaza, New York, NY 10006 USA.

## About the cover:

Beginning with volume 43 (January 2022), the cover of *Infection Control & Hospital Epidemiology* (ICHE) will feature art inspired by or reflective of topics within the scope of the journal and their impact on patients, healthcare personnel and our society. These topics include healthcare-associated infections, antimicrobial resistance, and healthcare epidemiology. The intent is to feature original artwork that has been created by individuals who have a personal connection to one or more of these topics through their clinical work, research, or experience as a patient or an affected patient's family member, friend or advocate. The goal is to provide readers with a visual reminder of the human impact of the topics addressed in the journal and the importance of the work being done by those who read or contribute to ICHE and by all who are trying to make healthcare safer through the elimination of healthcare-associated infections.

For more information about the ICHE cover and how to submit artwork for consideration for a future cover, please visit the ICHE website: <https://www.cambridge.org/core/journals/infection-control-and-hospital-epidemiology/front-covers>

## 2025

**Title:** *The Dynamics of Bacterial Evolution*, 2020

**Artist:** Angharad Ellen Green, PhD

**Medium:** The artwork is made up of individual Muller plots representing *Streptococcus pneumoniae* bacteria lineages that were evolved separately within nasopharynx and lung environments. The command line program muller (v0.6.0 - <https://pypi.org/project/muller/>), with default parameters applied, was used to produce genotypes and trajectories tables for each of the evolved lineages. These tables were then used as inputs for ggplot2 (v3.3.2) and ggmuller (v0.5.4) in R-Studio (v4.0.2), to produce Muller plots. The individual plots were then assembled to produce the resulting artwork.

### Dr. Green spoke to ICHE about her artwork.

**What was the inspiration for this artwork?** My postdoctoral research used an *in vivo* experimental evolution model to understand how *Streptococcus pneumoniae* (the pneumococcus) adapts to the lung and nasopharynx environments. The pneumococcus was experimentally evolved through a lung infection model and a nasopharynx infection model, producing independently evolved lung and nasopharynx lineages. We sequenced the evolved lineages and compared them to the ancestor to understand how their genomes had changed. This work also enabled us to determine how environmental differences between the upper and lower airways might shape pneumococcal adaptation and evolution. The resulting sequencing dataset was very large and complex with lots of interesting results. I wanted to use an effective method of visualising the data and Muller plots were chosen to display the evolutionary dynamics of mutations found in each evolved lineage over time. In these plots, each mutation is grouped as a genotype, which is represented by a different colour, and the blocks of colour expand when the genetic changes make the bacteria better able to survive in their local conditions. After completing the data analysis and publishing this work, I created this artwork as a memento of my postdoctoral research and I have a canvas of this work hanging in my apartment. Additionally, I wanted to demonstrate how scientific artwork can help visualise the complexities of evolution dynamics and help us to better understand bacterial processes.

**What is your personnel connection to the content of ICHE?** Throughout my career as a microbiologist, I have carried out research to investigate bacterial pathogenesis and antimicrobial resistance (AMR) of WHO-defined bacterial priority pathogens, such as *Pseudomonas aeruginosa*, methicillin-resistant *Staphylococcus aureus* (MRSA) and *Streptococcus pneumoniae*. I have actively promoted the importance of microbial genomic research to confront current global challenges, such as AMR and healthcare-acquired infections. I have championed microbiology research through my various roles in academia, volunteering on the Microbiology Society's Policy Committee and as a Research Manager at the Healthcare Infection Society. It is an honour for my bacterial evolution artwork to be on the cover of ICHE.

**Given the scope of the journal, why is this work appropriate for the cover of *Infection Control & Hospital Epidemiology*?** This artwork is made up of a collection of graphs called Muller plots, which are used to visualize how bacteria evolve when grown in diverse environments. The colours represent genetic changes that have taken place in the presence of environmental factors, such

---

as antimicrobials and the host immune system. The dynamics of evolution are complex and being able to visualise this process enables scientists to better understand bacterial processes, including the development of AMR. This artwork is appropriate for the cover of ICHE as it was created as a direct result of scientific research into how bacteria can adapt and evolve in diverse host niches to cause disease. Additionally, this artwork makes it possible for scientists to visualise the complexities of the dynamics of evolution and comprehend how bacteria adapt to different host environments.

*Dr. Green is a Senior Research Data Steward in the Advanced Research Computing Centre (ARC) at UCL in London. Her postdoctoral research at the University of Liverpool was supported by a Sir Henry Dale Fellowship, awarded by the Wellcome Trust and the Royal Society (grant number 204457/Z/16/Z) to Dr. Daniel R Neill. The research from which this artwork was derived was published in Molecular Biology and Evolution (Green AE, Howarth D, Chaguza C, et al. Pneumococcal colonization and virulence factors identified via experimental evolution in infection models. Mol Biol Evol 2023; 38: 2209–2226).*
