BRITISH ASSOCIATION OF OTOLARYNGOLOGISTS POLIOMYELITIS INOCULATION AND THE REMOVAL OF TONSILS AND ADENOIDS

The Council recommends that children should be inoculated against poliomyelitis before the removal of tonsils and adenoids. As a safeguard the ear, nose and throat specialist should ascertain from the parent whether the child has received its second inoculation.

It is appreciated that no direct pressure can be brought to bear on parents if they do not wish to have their child inoculated and they can only be warned of the possible risks.

PROPOSED HEARING AND SPEECH CENTRE AT THE ROYAL NATIONAL THROAT, NOSE AND EAR HOSPITAL

The Trustees of the Nuffield Foundation have offered a grant of £60,000 for the erection of a Hearing and Speech Centre attached to the Royal National Throat, Nose and Ear Hospital and its associated Institute of Laryngology and Otology.

The new Centre will be concerned with the diagnosis, assessment and development of hearing and speech in children suffering from impairment or total loss of these faculties.

The Centre will also be actively engaged in research into the whole problem presented by congenital and acquired deafness, and with the special training in this field of doctors and other professional workers such as psychologists, teachers of the deaf, speech therapists, health visitors and social workers. It is hoped that the Centre will generally be a focal point for all who are concerned in the care of the deaf child.

Building work will commence within the next few months.

THE MOUNT SINAI HOSPITAL

In order not to conflict with the International Congress of Otolaryngology to take place in Paris in July 1961, the annual intensive postgraduate course in Rhinoplasty, Reconstructive Surgery of the Nasal Septum and Otoplasty will be given January 7th to January 20th, 1961, by Dr. Irving B. Goldman and staff at the Mount Sinai Hospital, New York, in affiliation with Columbia University.

Candidates for the course should apply to Registrar for Postgraduate Medical Instruction, The Mount Sinai Hospital, Fifth Avenue and 100th Street, New York 29, New York.

POST-TONSILLECTOMY COMFORT

Immediate pain relief—Speedier Convalescence

The pain of traumatized tissues following tonsillectomy, demands its own relief—and points the need for analgesia that quickly reaches the irritated area.

ASPERGUM provides 'salivary analgesia' through the simple act of chewing — it brings pain-relieving acetylsalicylic acid into *intimate* and *prolonged* contact with the tonsillar

region, seldom reached even intermittently by gargling. The rhythmic stimulation of muscular action also aids in relieving local spasticity & stiffness: more rapid tissue repair is promoted. Each pleasantly flavoured chewing gum tablet provides $3\frac{1}{2}$ grains acetylsalicylic acid, permitting frequent use. Particularly suitable for children.
