THE SOCIETY FOR HOSPITAL EPIDEMIOLOGY OF AMERICA

PRESIDENT	C. Glen Mayhall, MD/ Memphis, Tennessee	TREASURER	Bruce H. Hamory, MD/Hershey Pennsylvania
PRESIDENT-ELECT	John P. Burke, MD/Salt Lake City, Utah	COUNCILOR	John M. Boyce, MD/Providence, Rhode Island
VICE PRESIDENT	Donald E. Craven, MD/Boston, Massachusetts	COUNCILOR	David K. Henderson, MD/Bethesda, Maryland
PAST PRESIDENT	Dennis G. Maki, MD/Madison, Wisconsin	COUNCILOR	Michael L. Tapper, MD/New York, New York
SECRETARY	William I. Martone, MD/Atlanta, Georgia	COUNCILOR	Agust I. Valenti, MD

President's Message—A Critical Second Decade

The Society of Hospital Epidemiologists of America (SHEA) was founded in the fall of 1980 in New Orleans, Louisiana, during the combined Inter-science Conference on Antimicrobial Agents and Chemotherapy (ICAAC) and annual meeting of the Infectious Diseases Society of America (IDSA). The first governing board took office in January 1981. Thus, as the new board takes office this month, the society enters its second decade. Under the excellent leadership of its previous presidents, the society has grown and prospered and is now firmly established.

In January 1990, the governing board and several committee chairs participated in a strategic planning meeting with a management consultant from Boston University. This meeting led to the recognition that the society could no longer rely on volunteer management if it were to continue to grow and expand its role in the field of hospital epidemiology and infection control. In addition to the recognition of a need for professional management, it

also became clear that the society would need to pursue several goals or survival functions critical to its continued growth and future vitality. These functions included a new agreement with the publisher of the society's journal that would assure a substantial income for the society from journal profits, a successful annual national meeting, an expanded educational program, and expansion of the membership.

During the past year, the society has made substantial progress toward these goals. A new contract has been negotiated with Slack Inc., the publisher of *Infection Control and Hospital Epidemiology*. Under the new contract, the society will assume complete editorial control of the journal. The society will receive a guaranteed income annually from journal profits. In the year 2005, the copyright for the journal will be transferred to the society for \$1.00.

In October 1990, the society signed a contract with Talley Management Group, Inc. of West Deptford, New Jersey.

Talley will provide headquarters management services, meeting management services, and management support for expansion of the society's educational program. In November 1990, the first meeting of the Annual Meeting Committee was convened at Talley headquarters. The committee initiated the annual meeting planning process and selected the dates and locations of the society's national meetings for 1992, 1993, and 1994. We look forward to the annual meeting of the society becoming the most important forum for the presentation of scientific data in hospital epidemiology and infection control. It is anticipated that members of the society and many other workers in the field of hospital epidemiology and infection control will view the annual meeting of SHEA as the only place to be when the meeting is held in the spring of every year from 1992 and beyond. The society will also attempt to expand its education program with several courses offered in different locations around the country each year.

Membership recruitment and membership retention programs will be initiated in the near future.

To reflect the broadening interest of the society in other related areas in the hospital, such as quality assurance and pharmacoepidemiology, the board proposed and the membership approved an amendment to the bylaws to change the name of the society from The Society of Hospital Epidemiologists of America to The Society **for** Hospital **Epidemiology** of America. In addition to the name change, the society will try to recruit epidemiologists and other scientists with an interest in these related disciplines and will provide a forum through its annual meeting for presentation of scientific data in these fields. Expansion of the scope of the society's interests to include these related fields has the goal of furthering the application of the science of hospital epidemiology to all areas concerned with the quality of healthcare.

The first year of the second decade will be filled with challenges, opportunities, and risks. Success in the pursuit of our new goals will depend, in large part, on the level of commitment of society members to these goals. The society will need firm support from its membership in the form of enthusiastic participation in the annual meeting, submission of abstracts for presentation at the annual meeting, and submission of manuscripts to *Infection Control and Hospital Epidemiology*. The membership will need to be prepared to participate in new educational programs and to assist in the recruitment of new members. Members of the society will need to make an effort to establish a collegial relationship with investigators in the related

fields involved with quality of healthcare and to admit these scientists to society membership.

Failure to accept these challenges and take advantage of the opportunities provided by a new relationship with the publisher of our journal and with the expertise and management resources provided by our new management firm may leave us at the crest of a hill with no fuel and no brakes. Several new societies with memberships interested in quality assurance and risk management have appeared. They have large memberships and annual national meetings. At least one society offers a certifying examination. We must be prepared to compete in this new environment. Our major resource is the collective expertise in science and epidemiology in our society. Our national meeting should be the national forum for the presentation of data on the "cutting edge" of science and epidemiology not only in hospital epidemiology and infection control, but also in closely related disciplines involved with improving the quality of healthcare. Our journal should be the most

important source for those interested in keeping up with the science and epidemiology of how to assure high quality healthcare.

The society became firmly established in the 1980s. In the 1990s, it must compete on a new playing field. Interest in the quality of healthcare has greatly expanded, and many new workers have entered the field. The society should approach this new era with courage and flexibility. If we are to control our own destiny, we will have to expand our activities into these related areas of quality assessment and improvement. We have been working on improving the quality of healthcare for 20 years by preventing nosocomial infections. The society membership has a great advantage in experience with the application of science and epidemiology to the solution of problems that adversely impact on the quality of care. We should not only move in this new direction, but we should be prepared to set the example and show the way.

C. Glen Mayhall, MD
President, SHEA

SHEA/CDC/AHA Training Program

The SHEA/Centers for Disease Control (CDC) /American Hospital Association (AI-IA) Hospital Epidemiology Training Program will be held May 16-19, 1991, in Chicago, Illinois. The course is intended for infectious disease fellows and new hospital epidemiologists. It emphasizes hands-on exercises in which participants work in small groups to detect, investigate, and control epidemiological problems encountered in the hospital setting. These working sessions are supplemented with lectures and

seminars covering fundamental aspects of hospital epidemiology.

Drs. Donald Goldmann, William Martone, and Robert Weinstein and Gina Pugliese, RN, MS, will co-chair the program. Meeting, hotel, and travel arrangements will be available through the AHA. The registration fee for this program is \$495. The registration fee for infectious disease fellows is \$250 if the application is accompanied by proof of training status. For registration, call the AHA (Phil Gordon): (312) 280-6764.
