Universal Vaporiser

and the "AERISER" (a smaller model)

THESE remarkable instruments have the power to subdivide solutions (whether volatile or non-volatile) so finely that the vapour can be forced even into the most remote positions of the respiratory tract and middle ear, not excepting the air cells and nasal sinuses. And this is accomplished successfully without the use of steam or heat. As *The Lancet* says:

"They render fluids like smoke"

These instruments are largely used in the exhibition of "Neboline" Compounds, of which the formulæ are included in the Brochure entitled "The Treatment of Pulmonary and Bronchial Affections," which will be posted to any member of the Profession on request.

VAPORISER

AERISER

OPPENHEIMER SON & Co. LTD.

Manufacturers of "Roboleine," the Reconstructive Food which has been consistently prescribed for over 20 years and used with the happiest results by Hospitals, Sanatoria, and Welfare Centres.

An Invitation to the Medical Profession

FORTIPHONE LIMITED extend a cordial invitation to any member of the medical profession to send for full particulars of the latest models of the Sonomax Fortiphone. In order that they may have ample opportunity to test and examine this new aid for the relief of deafness, Messrs. Fortiphone Limited will gladly arrange special demonstrations for doctors or their patients. Full details of arrangements will be gladly furnished on request.

The FORTIPHONE FOR THE DEAF

The Sonomax Fortiphone is the latest advance in the development of electrical hearing aids for the very Deaf. Manufactured by the world-famous firm of Siemens & Halske it embodies the Sonomax "waistcoat - pocket" Sound Amplifier. This tiny amplifier is incorporated only on Fortiphone hearing aids and gives a degree of concentrated power unsurpassed even by cumbersome "box" devices weighing several lbs. In conjunction with an exceptionally sensitive transmitter and a powerful earpiece of new design it enables even the 90% Deaf to hear clearly and without strain or distortion. After purchase we keep in touch with all our clients to ascertain whether the Fortiphone is giving continued satisfactory service and is being properly used. From time to time we clean and overhaul our clients' Fortiphone free of charge.

The Sonomax "waistcoat pocket" Sound Amplifier surpasses in power heavy box devices weighing many lbs. The greatest discovery of the age for the relief of deafness.

To enable any deaf person to make a test under everyday conditions, we offer the Sonomax Fortiphone on a 15-days' Home Trial for a nominal rental fee of 21s. The customer is thus freed from any unpleasant sense of obligation and at the same time is safeguarded from the disbursement of the full purchase price until entirely satisfied that the Fortiphone will be of real benefit. If the Fortiphone fails to give the help anticipated the customer can exchange it for another model or return it at his discretion.

The full rental fee is of course deducted from the purchase price if the customer decides to buy.

This method of sale has been adopted to protect the Deaf against the loss and disappointment entailed by the purchase of an unsuitable hearing aid.

The many recommendations the Fortiphone has already received from members of the medical profession are greatly appreciated, and with all respect, this plain statement is submitted as evidence that such recommendations have been, and will again be faithfully justified.

The Journal of Laryngology and Otology

(Founded in 1887 by MORELL MACKENZIE and NORRIS WOLFENDEN)

EDITED BY

A. LOGAN TURNER AND J. S. FRASER

ASSISTED BY

DOUGLAS GUTHRIE AND WALTER HOWARTH

1. Original Articles are accepted on the condition that they have not been published elsewhere.
2. Manuscripts should be typewritten, on one side only of the paper, and well spaced.
3. Galley proofs and engraver's proofs of illustrations are sent to the author. Corrections, which should be kept to a minimum, must be clearly marked and no additional matter should be added.
4. The order for reprints should be sent when returning galley proofs, and for this purpose special forms are supplied, on which the price of the reprints is stated.
5. Authors of Original Communications on Oto-Laryngology in other Journals are invited to send a copy, or two reprints, to the *Journal of Laryngology*. If they are willing, at the same time, to submit their own abstract (in English, French, Italian, or German) it will be welcomed.
6. Editorial Communications should be addressed to "Editors, *Journal of Laryngology*, c/o Messrs OLIVER AND BOYD, Tweeddale Court, Edinburgh."
7. The Annual Subscription is Forty Shillings, post free, and is payable in advance.
8. Single Copies of back numbers, both of the present and the previous series, are on sale at Four Shillings each.
9. An Annual Subscription can be commenced with any number of the Journal, and the preceding numbers of the current year can be purchased at Four Shillings each.

UNITED STATES OF AMERICA

Orders for this Journal, for single parts or yearly subscriptions, can be sent either through a local bookseller, or to Messrs G. E. SRECHER & Co., 31-33 East 10th Street, New York.

DeVILBISS, CO., LTD., WEST DRAYTON, MIDDLESEX

CHEVALIER JACKSON'S INSTRUMENTS FOR ŒSOPHAGOSCOPY, LARYNGOSCOPY, AND BRONCHOSCOPY

New Models as made for Walter G. Howarth, F.R.C.S.

Each Instrument is made in accordance with the details of Chevalier Jackson's most recent models, and each is supplied with a *spare light carrier*, i.e., 2 light carriers and 2 lamps. All the models have been redesigned with a view to rendering them more easily cleansed; all the crevices and corners for the dirt have been taken away.

To ensure better visibility the tips of the forceps are *black*.

The Howarth-Jackson's Instruments are **less expensive than other American or English models**, and a further economy has been effected by rendering the instrument tips interchangeable, thus reducing the number of forceps handles and tips required.

The lamps are 2.5 volt and more durable than the usual models.

Manufactured only by

DOWN BROS., L^{TD}.

‘Adrephine’

*An Aqueous Solution of Adrenalin Chloride
and Ephedrine Sulphate.*

BOTH Adrenalin and ephedrine exert a similar action when applied to the mucous membrane of the nose, throat or larynx. In ‘Adrephine’ the prompt, vigorous action of Adrenalin is supplemented by the slower but more sustained effect of ephedrine.

‘Adrephine’ may be used for shrinking the accessible mucous membranes of the respiratory tract prior to examination or operation. It will also be found of service in inflammatory conditions or congestion of the nasal mucous membrane and in the treatment of rhinitis. It is of proved value for the palliative treatment of hay fever.

Supplied in bottles of 1 oz. Further particulars will be sent on request.
