Plankton Stratigraphy

Volumes 1 and 2

Edited by H. M. BOLLI, J. B. SAUNDERS and K. PERCH-NIELSEN

'... this is the most comprehensive volume on the biostratigraphic use of planktonic microfossils available today... It will take its place amongst the classics in our field and serve as the standard reference for the next generation...'

Micropaleontology

Volume 1 covers the calcareous microfossils and includes planktic foraminifera, calcareous nannofossils and calpionellids.

£35.00 net Pb 0 521 36719 0 599 pp. 1989

Volume 2 describes siliceous and other non-calcareous microfossils, covering radiolaria, diatoms, silicoflagellates, dinoflagellates and ichthyoliths.

£30.00 net Pb 0 521 36720 4 451 pp. 1989

Cambridge Earth Science Series

Principles of Earthquake Source Mechanics

B. V. KOSTROV and SHAMITA DAS

This is the only book to provide an in-depth study of earthquake source theory and it will be an essential resource to graduate seismologists. It reviews continuum and fracture mechanics, discusses the inverse problems of the seismic moment tensor and concludes with a presentation of some current earthquake source models.

Cambridge Monographs on Mechanics and Applied Mathematics

Water and the Arid Lands of the Western United States

Edited by MOHAMED T. EL-ASHRY and DIANA C. GIBBONS

This book explores the nature of water demands in the agricultural and municipal sectors of the Western United States. Water management issues are illustrated through the use of specific case studies, written by a number of expert contributors. The concluding chapter urges the west to move away from its historical reliance on supply-side projects and toward better management of existing supplies.

Introduction to Crystal Chemistry

Student Edition

HOWARD W. JAFFE

This undergraduate textbook covers the basic principles of crystal chemistry, physics and crystallography, and presents the concept of crystal refractivity. Atoms and atomic structure are discussed, as are atomic bonding, crystal symmetry, crystal field theory, polyhedral structure, atomic packing and the more sophisticated optical properties of minerals, refractivity and polarizability in crystals.

£15.00 net Pb 0 521 36985 1 161 pp. 1989

Crystal Chemistry and Refractivity

HOWARD W. JAFFE

This advanced book deals with the architecture of natural and synthetic crystalline materials.

Particular attention is paid to an examination of refractivity in crystals and previously unpublished data on refractivity and polarizability constants and their applications are also given.

£55.50 net 0 521 25505 8 352 pp. 1989

Monteregian Treasures

J. A. MANDARINO and V. ANDERSON

This beautifully illustrated book is the first to bring together all the known data on the outstanding minerals identified at Mont Saint-Hilaire in Quebec. The minerals are described in detail and handsomely illustrated with over 200 colour and black and white photomicrographs, sketches, and crystal drawings. It will be a valuable aid to anyone interested in collecting or identifying minerals.

£60.00 net 0 521 32632 X 294 pp. 1989

Geological Maps

Their Solution and Interpretation

T. BOLTON

This illustrated textbook makes frequent reference to actual examples on which many of the problem maps are based. It includes exercises on borehole interpretation and extensive worked solutions.

£20.00 net Hc 0 521 36158 3 151 pp. 1989

NOTES FOR CONTRIBUTORS

Contributions for publication should be addressed to The Editors, *Geological Magazine*, Department of Earth Sciences, Downing Street, Cambridge CB2 3EQ, England, or may be submitted through a member of the Editorial Advisory Board (addresses inside front cover). Submission implies that the manuscript has not been published previously nor currently submitted for publication elsewhere.

All contributions, whether articles, correspondence or reviews, must be sent in triplicate and typed on one side of the paper, with wide margins and double-line spacing throughout. Any minor corrections should be made neatly in the typescript, leaving the margins clear. Contributions should follow the general style of papers in recent issues of the *Magazine*. The total length of a paper should not in general exceed 12 pages of the new A4 format of the *Magazine*, or 13000 word-equivalents. Priority may be given to short papers. The author is invited to nominate up to five possible referees, who will not necessarily be used.

Articles must be accompanied by a brief, informative rather than indicative, abstract. Headings should be set out clearly but not underlined. Primary headings should be in lower case, at margin, with arabic numeral; subheadings should be numbered 2.a., 2.b., etc., and tertiary headings 2.a.1., 2.a.2. No cross-references should be given by page number, but 'above' and 'below' should be used with the section specified, e.g. Section 2.a.2. The SI system of units should be used. The author should mark in the margin of the manuscript where figures and tables may be inserted. References to points in larger works should, where possible, quote the page reference, e.g. Ager, 1981, p. 102.

Tables should be typed with double-line spacing on sheets separate from the running text. Each table must

have a caption that will make the data in the table intelligible without reference to the text.

Illustrations should be prepared following the notes for guidance on the facing page. Duplicates of illustrations should be sent, and may be prints or, preferably, photocopies reduced to final size. Figures composed of photographs should be glossy prints presented at publication scale. Figure captions must be typed with double-line spacing on sheets separate from the running text.

The accuracy of references is the responsibility of authors. **References** must be double-spaced and spelt out in full, e.g.

BROOKS, M. & JAMES, D. G. 1975. The geological results of seismic refraction surveys in the Bristol Channel, 1970–73. *Journal of the Geological Society of London* **131**, 163–82.

Books should be cited as:

AGER, D. V. 1981. *The Nature of the Stratigraphical Record*, 2nd ed. London: Macmillan, 122 pp.

BOTT, M. H. P. 1973. The evolution of the Atlantic north of the Faroe Islands. In *Implications of Continental Drift to the Earth Sciences*, vol. 1 (eds. D. H. Tarling and S. N. Runcorn), pp. 175–89. London, New York: Academic Press.

Unpublished work should normally be referred to in the text in parentheses as, for example, 'private communication' or 'unpub. Ph.D. thesis, Univ. London, 1988', and not included in the reference list unless in the press.

Fifty offprints of each paper will be provided free of charge. Additional offprints may be purchased according to a set scale of charges if ordered when the proofs are returned.

Back Volumes: Vols. 1–60 and 112 out of print. Vols. 61–111: Enquiries to Wm Dawson & Sons Ltd, Cannon House, Folkestone, Kent. Volumes 113 onwards are available from Cambridge University Press.

Copying

This journal is registered with the Copyright Clearance Center, 27 Congress St., Salem, Mass. 01970. Organizations in the USA who are also registered with C.C.C. may therefore copy material (beyond the limits permitted by sections 107 and 108 of US copyright law) subject to payment to C.C.C. of the per-copy fee of \$5.00. This consent does not extend to multiple copy for promotional or commercial purposes. Code 0016-7568/89 \$5.00 + .00.

For all other use, permission should be sought from Cambridge or the American Branch of Cambridge University Press.

Claims for missing issues can only be considered if made immediately after receipt of the subsequent issue.

Advertising: Details of advertising in *Geological Magazine* may be obtained from the publisher.
