<i>Foreword</i>	<i>page</i>	ix
<b>1 Introduction</b>		<b>1</b>
1.1 Interaction radius and interaction strength		1
1.2 Symmetries of strong interactions		4
1.3 Basic properties of the strong interaction		7
1.4 Free particles		10
1.5 Hadrons as composite objects		13
1.6 Interacting particles		17
1.7 General properties of $S$ -matrix		23
<b>2 Analyticity and unitarity</b>		<b>31</b>
2.1 Causality and analyticity		31
2.2 Singularities of the Born diagrams		35
2.3 Higher orders		38
2.4 Singularities of Feynman graphs: Landau rules		46
2.5 Beyond perturbation theory: relation to unitarity		61
2.6 Checking analytic properties of physical amplitudes		63
<b>3 Resonances</b>		<b>73</b>
3.1 How to examine unphysical sheets of the amplitude		73
3.2 Partial waves and two-particle unitarity		75
3.3 Analytic properties of partial waves and resonances		77
3.4 Three-particle unitarity condition		79
3.5 Properties of resonances		80
3.6 A resonance or a particle?		85
3.7 Observation of resonances		87

<b>4</b>	<b>Electromagnetic interaction of hadrons</b>	<b>92</b>
4.1	Electron–proton interaction	92
4.2	Form factors	95
4.3	Isotopic structure of electromagnetic interaction	100
4.4	Deep inelastic scattering	102
<b>5</b>	<b>Strong interactions at high energies</b>	<b>111</b>
5.1	The rôle of cross-channels	111
5.2	Qualitative picture of elastic scattering	113
5.3	Analyticity of elastic amplitude and interaction radius	119
5.4	Impact parameter representation	124
5.5	Constant interaction radius hypothesis	125
5.6	Possibility of a growing interaction radius	128
<b>6</b>	<b><math>t</math>-channel unitarity and growing interaction radius</b>	<b>137</b>
6.1	Analytic continuation of two-particle unitarity	139
6.2	$\rho_0 = \text{const}$ , $\sigma_{\text{tot}} = \text{const}$ contradicts $t$ -channel unitarity	145
<b>7</b>	<b>Theory of complex angular momenta</b>	<b>152</b>
7.1	Sommerfeld–Watson representation	153
7.2	Non-relativistic theory	155
7.3	Complex $\ell$ in relativistic theory	159
7.4	Analytic properties of partial waves and unitarity	165
<b>8</b>	<b>Reggeon exchange</b>	<b>173</b>
8.1	Properties of the Regge poles. Factorization	174
8.2	Reggeon quantum numbers. The Pomernanchuk pole	179
8.3	Properties of the Pomernanchuk pole	186
8.4	Structure of the reggeon residue	191
8.5	Elastic scatterings of $\pi$ and $N$ off the nucleon	203
8.6	Conspiracy	210
8.7	Fermion Regge poles	213
<b>9</b>	<b>Regge poles in perturbation theory</b>	<b>219</b>
9.1	Reggeons, ladder graphs, and multiparticle production	219
9.2	Reggeization in $g\phi^3$ theory	220
9.3	Inelastic processes at high energies	240

<b>10</b>	<b>Regge pole beyond perturbation theory</b>	<b>258</b>
10.1	Basic features of multiparticle production	259
10.2	Inconsistency of the Regge pole approximation	269
10.3	Reggeon branch cuts and their rôle	281
<b>11</b>	<b>Reggeon branchings</b>	<b>287</b>
11.1	$\ell = -1$ and restriction on the amplitude falloff with energy	288
11.2	Scattering of particles with non-zero spin	296
11.3	Multiparticle unitarity and Mandelstam singularities	301
<b>12</b>	<b>Branchings in the <math>s</math> channel and shadowing</b>	<b>311</b>
12.1	Reggeon branchings from the $s$ -channel point of view	311
12.2	Calculation of the reggeon–reggeon branching	314
12.3	Analytic structure of the particle–reggeon vertex	318
12.4	Branchings in quantum mechanics: screening	323
12.5	Back to relativistic theory	330
<b>13</b>	<b>Interacting reggeons</b>	<b>334</b>
13.1	Constructing effective field theory of interacting reggeons	334
13.2	Feynman diagrams for reggeon branchings	338
13.3	Enhanced branchings	345
13.4	Feynman diagrams and reggeon unitarity conditions	351
<b>14</b>	<b>Reggeon field theory</b>	<b>354</b>
14.1	Prescriptions for reggeon diagram technique	355
14.2	Enhanced diagrams for reggeon propagator	360
14.3	$\sigma_{\text{tot}} \simeq \text{const.}$ as an infrared singular point	363
14.4	Weak and strong coupling regimes	367
14.5	Weak and strong coupling: view from the $s$ channel	373
<b>15</b>	<b>Particle density fluctuations and RFT</b>	<b>381</b>
15.1	Reggeon branchings and AGK cutting rules	381
15.2	Absence of branching corrections to inclusive spectrum	390
15.3	Two-particle correlations	393
15.4	How to tame fluctuations	396
15.5	Weak coupling: vanishing pomeron–particle vertices	402
15.6	How to rescue a pomeron	405
15.7	Vanishing of forward inelastic diffraction in RFT	411
15.8	All $\sigma_{\text{tot}}$ are asymptotically equal?	416

<b>16</b>	<b>Strong interactions and field theory</b>	<b>418</b>
16.1	Overview	418
16.2	Parton picture	422
16.3	Deep inelastic scattering	434
16.4	The problem of quarks	439
16.5	Zero charge in QED and elsewhere	443
16.6	Looking for a better QFT	447
16.7	Yang–Mills theory	454
16.8	Asymptotic freedom	467
	<i>Postscript</i>	470
	<i>References</i>	473
	<i>Index</i>	475
