

Sharecroppers of the Sertão

ECONOMICS AND DEPENDENCE ON A BRAZILIAN PLANTATION. *Allen W. Johnson*. This is an ethnographic account of the economic and ecological relationships of the agricultural workers on a plantation in the harsh, semi-arid backlands of Northeastern Brazil. Unlike earlier studies, this work sees the search for security as underlying much of the worker's economic behavior. Illustrated. \$6.95

San Miguel

A MEXICAN COLLECTIVE EJIDO. *Raymond Wilkie*. In 1936, the Laguna region of north central Mexico was the scene of one of the most ambitious experiments in land reform ever undertaken in Latin America. This anthropological study describes the effects of sudden economic change on one community—its political structure, family life, religion, education, and leisure. Illustrated. \$7.50

Interest, Conflict and Political Change in Brazil

Philippe C. Schmitter. The author traces the emergence of Brazilian interest groups through the era of industrialization and modernization that followed the 1930 revolution. He relates the groups to existing political structures and examines their interaction with each other, the state, and the military, concluding with speculation about the absence of genuine pluralism in Brazil. \$15.00
