

## LETTER TO THE EDITOR

### Notice of an Error Being Unwittingly Propagated

My colleague, Professor Pierre Richard of the Department of Geography, University of Montreal, has kindly pointed out to me an error in Table 3.1, pp. 52–53 of my book “Postglacial Vegetation of Canada” which has been unwittingly repeated by Bonan and Hayden (1990) in their article in *Quaternary Research*, 33, p. 215. The column showing mean annual growing degree-day range ( $>5.5^{\circ}\text{C}$ ) actually gives values on

the Fahrenheit scale and each value should be divided by 1.8 to give correct values. I regret this oversight and apologize to any colleagues who have been misled.
