## The Mathematical Theory of Quantitative Genetics

**M. G. Bulmer**

The emphasis in this book is on discussion of the underlying principles illustrated by simple examples. A basic knowledge of statistical methods and theory is assumed and problems for solution are included. £27

## Aboriginal Man Adapting

The Human Biology of Australian Aborigines

**R. L. Kirk**

This book presents a broad sweep of the biological relationship between man and nature on a continental scale. Aborigines have become physically and genetically diversified in response to geographical separation and socially isolating mechanisms such as differences in language; and estimates are made at the rate at which such differentiation takes place. Attention is also given to physiological adaptation, particularly the ability to withstand temperature stress and to utilize water under desert conditions. Illustrated £20
