Executive Secretary: M. W. Richey. Assistant Secretary: Miss L. M. A. Tower

The Journal of the Institute of Navigation

THE *Journal* is published quarterly by the Institute and is edited by the Executive Secretary. It contains original papers contributing to the science of navigation, including those presented at meetings of the Institute together with the ensuing discussion. In addition the *Journal* includes a record of current navigational work, reviews of important books, and other matters of concern to those interested in navigation.

The *Journal* is free to all members of the Institute. It is sold to the public at seven shillings and sixpence per copy or, by subscription, at thirty-one shillings per annum (post free) and may be obtained through all booksellers and John Murray (Publishers) Ltd., 50 Albemarle Street, London W1. American subscriptions at \$1.50 per copy or \$6 per annum (post free).

Contributions, which are welcomed from both members and non-members, should be addressed to the Editor.

Enquiries for advertising space should be addressed to the Institute offices.

The postal address of the Institute is:

The Institute of Navigation,
at The Royal Geographical Society,
1 Kensington Gore, London SW7.

Telephone: Kensington 5021.

Life line of communication...

Marconi himself was the first to apply his discovery to the safety of seafarers. His successors in the company he founded have vastly developed his initial research over the past half century. Marconi equipment in ships and shore stations today contributes to the accuracy of navigation, the efficient operation of both warships and merchantmen, and the comfort and convenience of those who trade and travel by sea and the forces which protect them. The mariner is warned of hazards, guided into safe channels and guarded from "the dangers of the sea and the violence of the enemy" by Marconi's.

—but only one 'Navigators Insurance'

The obvious and appropriate Company for the insurance of the property and liabilities of all professional and amateur NAVIGATORS.

Founded in 1921 under the chairmanship of the late Admiral Sir John Franklin Parry, K.C.B., we specialise in the insurance requirements of all who are or were connected with the sea. We have added interest in their insurance problems in that the majority of our executive staff served, at one time, in the Royal Navy or Royal Merchant Navy. We offer impeccable security and are renowned for prompt and generous settlement of claims.

Classes of business transacted include:

- Fire, Accident, Marine
- Personal Effects (Ashore, Afloat and Airborne)
- Navigator's Indemnity (Sea and Air)

Consult your Broker or write for particulars:

A sure guide to a good ship

On the high seas . . .
 (and in narrow waters) Brown Gyro Equipment is renowned for dependability—merchant fleets of the world, from liners to oil tankers, rely on these navigational aids.

Coming into harbour . . .
 (and in open waters) nothing helps good seamanship better than Subsig Echo Sounding Equipment—accurate to the last foot of clearance, and available in recording or indicator models.

The "HEZZANITH" Patent MARK VII
**PROJECTOR BINNACLE
 AND COMPASS**

By means of a series of optical elements an enlarged erect image of a portion of the card covering an arc of 40° in length is produced on a ground glass screen which is viewed in an adjustable plane mirror.

All stray light is effectively screened, and there is a completely unobstructed view of the card from above, permitting the normal use of an azimuth instrument by day or night.

Send for our special Projector Binnacle
 Leaflet (N.J.55).

The Use of Radar at Sea

"Whatever happens the book will remain a milestone on the road of radar in its relation to shipping."—*Hansa* (Hamburg).

"An excellent book which fulfils admirably the function for which it was conceived. It should find a place in the chart-room bookcase of every radar-fitted vessel and in the private reference library of every navigator."

—*Journal of the Honourable Company of Master Mariners.*

"Well-balanced in all its parts; the authors have succeeded in never losing sight of the main purpose of the book, which is to be a guide for the use of radar at sea. . . . The wording is so clear and simple that it gives the reader confidence."—*International Hydrographic Bulletin.*

"Any officer whose ship is fitted with radar would do well to study this thorough treatise upon the subject."—*The Marine Observer.*

"There can be no doubt that a copy placed on board any radar-fitted ship would pay dividends."—*Shipping World.*

"There should be a place for it on the bookshelves of all those who use radar at sea."—*The Seafarer.*

"Will never have a chance to become dusty on the bookshelf of either the radar operator or the knowledgeable enthusiast."—*Lloyd's List.*

"An excellent handbook for the navigator."—*Navigation* (Paris).

"Undoubtedly as a textbook the work stands alone."

—*Merchant Navy Journal.*

FLAT TUBES

SAVE SPACE

DG 16-21
 FOR 'A' SCAN RADAR
 AND INSTRUMENT
 APPLICATIONS

The screen of the DG16-21 cathode ray tube is a rectangle measuring $5\frac{1}{2} \times 1\frac{1}{2}$ inches—the logical shape for radar 'A' scan and many instrument applications. A number of these tubes can be stacked vertically to provide multiple displays within a confined space . . . they are the answer to those problems in design where circular tubes make equipments excessively bulky.

 easily stacked
 for multiple trace
 comparison

Deflection : Electrostatic, symmetric or asymmetric V_h : 6.3 volts. I_h : 0.3 amp. Base : B14A.	TYPICAL OPERATING CONDITIONS					
	V_{a3}	V_{a2}	V_{a1}	V_g	Deflection Sensitivity	
	5,000V	600 to 700V	1,800V	-25 to -70V	S_x	S_y
					0.19mm/V	0.21mm/V

The DG 16-21 has a green luminescent medium persistence screen. Versions with other screens are contemplated and your comments are invited.

The measure

of reliability...

Sperry precision is no accident. There are cases on record where the same sensitive element has been in use for more than a quarter of a century. Sperry precision is the outcome of pure and applied research, practical development and long manufacturing experience—and it is a measure of the reliability of the Mark XIV Compass, for example, that 21.3 per cent of the cost of its manufacture is directly attributable to inspection and test.

SPERRY MARINE NAVIGATIONAL EQUIPMENT

SPERRY GYROSCOPE COMPANY LIMITED · GREAT WEST ROAD · BRENTFORD · MIDDLESEX

**“DURING NINE-WEEK VOYAGE
NO ADJUSTMENTS OR REPAIRS
WERE MADE”**

says Radio Officer J. S. Dalton — S.T. “NORTHERN SCEPTRE”

“At times on this salt fishing trip, ship echoes were observed at 30 miles showing strongly, these being of about 1,500 tons. Land was also seen at this range, also strongly. This coastline was very broken, being composed of small islands 200-300 feet high, though many were lower than this. These being known bad ‘radar targets’. Generally this coast showed well at 20 miles. The radar was used for picking up Esbjerg approaches.

The harbour approaches being made by radar first on the 15 miles range, the coast being sandy. The channel being marked by small buoys which were picked up very well at 5 to 6 miles and showing in a straight line.

During the voyage of nine weeks no adjustments or repairs were made of any sort, the equipment proving highly reliable and capable of running long periods. My opinion of the 212 is that it is a highly satisfactory radar.”

Although Decca Radar is serving the mariner in many thousands of ships of all nations, there are occasions when its value under exceptionally bad conditions is of such significance that our users are pleased to write and tell us. In the belief that this is really worthwhile testimony, we present this series of factual incidents in the use of Decca Radar at sea.

DECCA RADAR LIMITED • LONDON • ENGLAND

 DR 12d

Every ship in this picture relies on **KELVIN HUGHES**

Taken from the foredeck of the British India Company's "Chilka", this picture shows a typical scene in the Royal Albert Dock, London. Like the "Chilka" herself, every ship shown has Kelvin Hughes equipment on board. Radar, Echo Sounders, Pneumercator Gauges, Stress and Stability Indicators . . . these are some of the Kelvin Hughes Instruments to be found among this representative gathering of deep-sea vessels. More than half these ships use the Kelvin Hughes Chart Correction Service, and they all rely on Kelvin Hughes Compasses, Sextants, Chart Instruments, etc., to assist in maintaining high standards of navigational efficiency.

The ships, left to right, are:—
