

## *Book Reviews*

If Siegfried were to repeat his lecture today, he might take the more contemporary theory of genetics, and explain how schools of thought suddenly evolve, often in small and isolated communities, and produce, within a few short years, eternal contributions to science and culture. The human record contains many examples of this from Greek sculpture to British scientific discoveries in the nineteenth century. Such an approach might even explain how the ideology of atheistic communism evolved in the mind of a student working alone in the world's richest capital city, governed by the most conservative establishment on earth.

A. J. DUGGAN.
