

MANAGING MATH FOR MANAGEMENT

Three easily understood new texts reveal the basics of harnessing the power of modern computational mathematics.

CALCULUS WITH APPLICATIONS IN MANAGEMENT AND THE SOCIAL SCIENCES

William W. Thompson — Louisiana State University

Emphasis is on consistent, sound mathematics and its potential use for developing realistic models for application. Clear and easily understood, with algebra being the only prerequisite. Numerous examples, problems, chapter outlines and objectives throughout.

1977 480 pp. (est.) Cloth \$13.95

FUNDAMENTAL STATISTICS FOR BUSINESS AND ECONOMICS

Thomas R. Dyckman and L. Joseph Thomas — both of Cornell University

Complete coverage of all topics required in an introductory statistics course for graduates and undergraduates in management or economics. The highly flexible format allows instructors great latitude. Emphasis is on applications — accounting, finance, marketing, production and quality control — rather than on theory.

1977 672 pp. (est.) Cloth \$16.95

INTRODUCTION TO MANAGEMENT SCIENCE

Thomas M. Cook and Robert A. Russell — both of The University of Tulsa

Concisely written, student-orientated overview of the field and the most widely used OR/MS techniques. Uses actual "Harvard-type" cases to promote motivation and interest. Ideal for a one-semester course, the text requires little mathematical sophistication.

1977 544 pp. (est.) Cloth \$14.95
