# INDEX FOR VOLUME 165

	PAGE
<b>Amorim, L., Oh, Y.-G. &amp; Santos, J. O. D.</b> Exact Lagrangian submanifolds, Lagrangian spectral invariants and Aubry–Mather theory . . . . .	411
<b>Bayart, F., Li, D., Queffélec, H. &amp; Rodríguez-Piazza, L.</b> Approximation numbers of composition operators on the Hardy and Bergman spaces of the ball and of the polydisk. . . . .	69
<b>Benini, A. M. &amp; Fagella, N.</b> Singular values and bounded Siegel disks . . . . .	249
<b>Bergweiler, W., Eremenko, A., &amp; Hinkkanen, A.</b> Entire functions with two radially distributed values . . . . .	93
<b>Bucur, A., Costa, E., David, C., Guerreiro, J. &amp; Lowry-Duda, D.</b> Traces, high powers and one level density for families of curves over finite fields . . . . .	225
<b>Bugeaud, Y. &amp; Kaneko, H.</b> On the digital representation of smooth numbers . . . . .	533
<b>Bulinski, K.</b> Spherical recurrence and locally isometric embeddings of trees into positive density subsets of $\mathbb{Z}^d$ . . . . .	267
<b>Česnavičius, K.</b> The $\ell$ -parity conjecture over the constant quadratic extension . . . . .	385
<b>Chen, Z.</b> Families of elliptic curves with the same mod 8 representations . . . . .	137
<b>Cho, S. &amp; Koda, Y.</b> Haken spheres for genus two Heegaard splittings . . . . .	563
<b>East, J.</b> Presentations for (singular) partition monoids: a new approach . . . . .	549
<b>Fleischmann, P. &amp; Woodcock, C.</b> Free actions of $p$ -groups on affine varieties in characteristic $p$ . . . . .	109
<b>Gongopadhyay, K. &amp; Parsad, S.</b> On Fenchel–Nielsen Coordinates of Surface Group Representations into $SU(3, 1)$ . . . . .	1
<b>Henry, S.</b> On toposes generated by cardinal finite objects . . . . .	209
<b>Humphries, S. P.</b> Generalised Cogrowth series, random walks, and the group determinant . . . . .	445
<b>Kim, I &amp; Zhang, G.</b> Local rigidity of complex hyperbolic lattices in semisimple Lie groups . . . . .	179
<b>Kim, S.</b> Dynamical convexity of the Euler problem of two fixed centers . . . . .	359
<b>Lyall, N. &amp; Magyar, Á.</b> Product of Simplices and sets of positive upper density in $\mathbb{R}^d$ . . . . .	25
<b>Mckee, A., Skalski, A., Todorov, I. G. &amp; Turowska, L.</b> Positive Herz–Schur multipliers and approximation properties of crossed products . . . . .	511
<b>Ng, C.-K. &amp; Wong, N.-C.</b> On the decomposition into Discrete, Type II and Type III $C^*$ -algebras . . . . .	475
<b>Ohtsuki, T. &amp; Yokota, Y.</b> On the asymptotic expansions of the Kashaev invariant of the knots with 6 crossings . . . . .	287
<b>Paoluzzi, L. &amp; Porti, J.</b> Invariant character varieties of hyperbolic knots with symmetries . . . . .	193
<b>Peluse, S.</b> Mixing for three-term progressions in finite simple groups . . . . .	279
<b>Rossmann, T.</b> Stability results for local zeta functions of groups algebras, and modules . . . . .	435
<b>Saanouni, T.</b> A note on strong instability of standing waves for some semilinear wave and heat equations . . . . .	53
<b>Saito, T.</b> High distance tangles and tunnel number of knots . . . . .	541
<b>Seuret, S.</b> Inhomogeneous random coverings of topological Markov shifts . . . . .	341
<b>Tsuji, S.</b> The Torelli group and the Kauffman bracket skein module . . . . .	163
<b>Weaver, N.</b> On the unique predual problem for Lipschitz spaces . . . . .	467

# INSTRUCTIONS TO AUTHORS

## 1. Preparation of Manuscripts

A paper should be submitted electronically to [mpeditor@hermes.cam.ac.uk](mailto:mpeditor@hermes.cam.ac.uk) in pdf form only. Authors are encouraged to prepare their manuscripts in LaTeX 2e using the PSP class file. The class file, together with a guide, `PSP2egui.tex`, and sample pages, `PSP2esam.tex`, can be downloaded from <ftp://ftp.cambridge.org/pub/texarchive/journals/latex/jspcls> in either packed or unpacked form. These files will be updated periodically: please ensure that you have the latest version.

A cover page should give the title, the author's name and institution, with the address to which mail should be sent.

The title, while brief, must be informative (e.g. *A new proof of the prime-number theorem*, whereas, *Some applications of a theorem of G. H. Hardy* would be useless).

Authors are asked to provide an abstract as a basis for search on the Web. This may be an explicit abstract at the start of the paper. Otherwise the first paragraph or two should form a summary of the main theme of the paper, providing an abstract intelligible to mathematicians. Please note that the abstract should be able to be read independently of the main text. References should therefore not be included in the abstract.

Authors are encouraged to check that where references are given, they are used in the text. Experience has shown that unused references have a habit of surviving into the final version of the manuscript.

For a typescript to be accepted for publication, it must accord with the standard requirements of publishers, and be presented in a form in which the author's intentions regarding symbols etc. are clear to a printer (who is not a mathematician). Please also check the Cambridge University Press website for information about the style in which the paper should be submitted.

## 2. Notation

Notation should be chosen carefully so that mathematical operations are expressed with all possible neatness, to lighten the task of the compositor and to reduce the chance of error. For instance  $n$  sub  $k$  is common usage, but avoid if possible using  $c$  sub  $n$  sub  $k$ . Fractions are generally best expressed by a solidus. Complicated exponentials like:

$$\exp\{z^2 \sin \theta / (1 + y^2)\}$$

should be shown in this and no other way.

It helps if displayed equations or statements which will be quoted later are numbered in order on the right of their line. They can then be referred to by, for example 'from (7)'.  
The author must enable the printer (if necessary by pencilled notes in the margin) to distinguish between similar symbols such as  $o$ ,  $O$ ,  $o$ ,  $O$ ,  $0$ ;  $x$ ,  $X$ ,  $\times$ ;  $\phi$ ,  $\Phi$ ,  $\emptyset$ ;  $l$ ,  $1$ ;  $e.k.$ ,  $\kappa.k.$

Footnotes should be avoided.

Please use typewriter font for all addresses and email addresses.

Omit  $\square$  from the end of proofs.

In listing assertions, conclusions, etc. do not use a vertical column of dots and do not follow (a) or (i) by a capital letter (eg. (i) the absolute value . . .)

In making references precise use [3, theorem 5.1]

## 3. Diagrams

Diagrams should be in black ink or from a high-quality laser printer and should not be larger than 30 cm by 45 cm. Lettering to be inserted by the printer should be shown clearly on copies of the figures rather than on the original drawings. Please note that a charge may be made if hand-drawn diagrams need to be re-drawn for publication.

Figure 1 here

A typed list of captions may be provided at the end of the manuscript in the following format:

Figure 1. *A basis for ...*

Note that there is no point at the end of the heading. All headings should be centred.

## 4. Tables

Tables should be numbered (above the table) and set out on separate sheets. Indicate the position of each in the text as for figures:

Table 3 here

Heading for tables should be shown in the following way:

Table 1. *A basis for ...*

Note that there is no point at the end of the heading. All headings should be centred over columns.

## 5. References

References should be collected at the end of the paper numbered in alphabetical order of the authors' names. Where references are given, they should be used in the text. Titles of journals should be abbreviated as in *Mathematical Reviews*. The following examples show the preferred style for references to a paper in a journal, a paper in a proceedings volume, a book and an unpublished dissertation:

[1] J. F. ADAMS. On the non-existence of elements of Hopf invariant one. *Ann of Math.* (2) **72** (1960), 20-104.

[2] M. P. FOURAM and D. S. SCOTT. Sheaves and logic. In *Applications of Sheaves* Lecture Notes in Math. vol. 753 (Springer-Verlag, 1979), pp. 302-401.

[3] P. T. JOHNSTONE. *Stone Spaces*. Cambridge Studies in Advanced Math. no. 3 (Cambridge University Press, 1982).

[4] F. W. LAWVERE. Functional semantics of algebraic theories. PhD. thesis. Columbia University (1963).

## 6. Submission of papers accepted for publication

When a paper has been accepted for publication the relevant TeX files of the final version, accompanied by a pdf file, should be sent to the Editor by e-mail.

This journal issue has been printed on FSC-certified paper and cover board. FSC is an independent, non-governmental, not-for-profit organization established to promote the responsible management of the world's forests. Please see [www.fsc.org](http://www.fsc.org) for information.
