

# ADDENDUM

## Editor's Note

**G. E. Romero, R. A. Sunyaev and T. Belloni**

Editorial board of the IAU Symposium 275: 'Jets at All Scales'

As any human labor, the editing process of a book is open to human error. Especially, when there are more than 100 contributors and strict deadlines. Ours was not free of such a fate, but the good will of Cambridge University Press allows us to correct an involuntary omission.

The present addendum includes electronic versions of three articles that were lacking in the original publication:

*The role of AGN jets and intracluster magnetic fields in the formation and acceleration of cosmic rays* by Nectaria A. B. Gizani.

*Searching for radio relics and halos. Their role in the formation and acceleration of extragalactic cosmic rays* by Nectaria A. B. Gizani.

*Precessing AGN jets, bubbles and cooling flows* by D. Falceta-Gonçalves, A. Caproni, Z. Abraham, E. M. de Gouveia Dal Pino and D. M. Teixeira.

We apologize for any inconvenience.
