Geomorphology

The Mechanics and Chemistry of Landscapes

ROBERT S. ANDERSON
SUZANNE P. ANDERSON

This textbook provides a modern, quantitative and process-oriented approach to equip students with the tools to understand geomorphology. Setting up problems as a conservation of mass, ice, soil, or heat, this book arms students with tools to fully explore processes, understand landscapes, and to participate in this rapidly evolving field.

Structural Geology

HAAKON FOSSEN

Lavishly illustrated in color, this textbook takes an applied approach to introduce undergraduate students to the basic principles of structural geology. Containing numerous end-of-chapter problems, e-learning modules, and with stunning field photos and illustrations, this book provides the ultimate learning experience for all students of structural geology.

Hb: 978-0-521-51664-8: 480 pp.

Mantle Convection for Geologists

GEOFFREY F. DAVIES

This book describes the physics and fluid dynamics of mantle convection, explaining what it is, how it works, and how to quantify it in simple terms. Common misconceptions and controversies are addressed – providing a straightforward but rigorous explanation of this key process for students and researchers across a variety of geoscience disciplines.

Geostatistics Explained

An Introductory Guide for Earth Scientists

STEVE MCKILLUP
MELINDA DARBY DYAR

A reader-friendly introduction to geostatistics for students and researchers struggling with statistics. Using simple, clear explanations for introductory and advanced material, it demystifies complex concepts and makes formulas and statistical tests easy to apply. It can be used for undergraduate courses or for self-study and reference, with worked examples at the end of each chapter reinforce a clear understanding of the statistical tests and their applications.

Biominerals and Fossils Through Time

JEAN-PIERRE CUIF
YANNICKE DAUPHIN
JAMES E. SORAUF

This book emphasizes skeletal formation and fossilization in a geologic framework in order to understand evolution, relationships between fossil groups, and the use of biomineral materials as geochemical proxies for understanding ancient oceans and climates.

Hb: 978-0-521-87473-1: 512 pp.

Second Edition**Erosion and Sedimentation**

PIERRE Y. JULIEN

The second edition of this acclaimed, accessible textbook brings the subject of sedimentation and erosion completely up-to-date, providing an excellent primer on both fundamental concepts of sediment-transport theory and methods for practical applications.

Hb: 978-0-521-83038-6: 392 pp.

Cosmochemistry

HARRY Y. MCSWEEN, JR.
GARY R. HUSS

How did the Solar System's chemical composition evolve? This textbook provides the answers in the first interdisciplinary introduction to cosmochemistry. It makes this exciting and evolving field accessible to undergraduate and graduate students from a range of backgrounds, including geology, chemistry, astronomy and physics.
