The helicopter's role in increased food production . . .

948AH

Fundamental advantages of the helicopter for crop-spraying pest-control and fertiliser laying duties are (a) its great manoeuvrability (b) its ability to fly low at slow speeds (c) simplicity of taking off and landing within confined spaces (d) its ability to cover large areas in a short time The 'Bristol' Type 171 helicopter has been constructed and designed to give a fully versatile performance with an exceptionally high safety factor Agricultural development is but one aspect of many industrial and social services offered by this type of aircraft

OBJECTS OF THE ASSOCIATION

The objects of the Association are to collect compile and disseminate information of a technical and semi technical nature pertaining to Helicopters and all other types of Rotating Wing Aircraft. The Association aims to work in close co operation with existing Aeronautical Bodies on matters affecting its Objects and it may act as an Advisory Body in the promotion of legislation calculated to be of benefit to the development of Rotating Wing Aircraft.
