

Subscription rates

Subscription rates for volume **46** (2009) of *Journal of Applied Probability (JAP)* are as follows (post free and including online access at <http://projecteuclid.org/jap/>): US\$384.00; A\$402.00; £186.00 for libraries and institutions; or US\$128.00; A\$134.00; £62.00 for individuals belonging to a recognised scientific society. The subscription rates for volume **41** (2009) of *Advances in Applied Probability*, the companion publication, are the same; if both journals are ordered directly from the Applied Probability office at the same time, the combined price is discounted by 10%. Please send all enquiries to: Applied Probability Subscriptions, School of Mathematics and Statistics, University of Sheffield, Sheffield S3 7RH, UK (telephone +44 114 222 3922; fax +44 114 272 9782; email s.c.boyles@sheffield.ac.uk). Cheques, money orders, etc. should be made payable to 'Applied Probability'. Payment is acceptable in US, Australian or UK currency, or by Visa or Mastercard. We can provide back issue prices on application.

Notes for contributors

Research papers are published in both the *Journal of Applied Probability (JAP)* and *Advances in Applied Probability (AAP)*, with longer papers usually appearing in *AAP*. In addition, *JAP* publishes short communications of a few printed pages in the nature of notes and letters specifically related to papers that have appeared in *JAP*. Review papers and papers in *stochastic geometry and statistical applications* are published in *AAP*.

Fifty offprints of each paper will be provided free, with additional offprints available at cost.

Papers submitted to the Applied Probability journals are considered on the understanding that they have not been published previously and are not under consideration by another publication. Accepted papers will not be published elsewhere without the written permission of the Trust. Submitted papers should be in English. It is the author's responsibility to ensure an acceptable standard of language, and a paper failing to meet this requirement may go back to the author for rewriting before being sent out for review.

Papers should include: (i) a **short abstract** of 4–10 lines giving a non-mathematical description of the subject matter and results; (ii) a list of **keywords** detailing the contents; and (iii) a list of **classifications**, using the 2000 Mathematics Subject Classification scheme (<http://www.ams.org/msc/>). Letters to the Editor need not include these. To assist authors in writing papers in the Applied Probability style, they may use the L^AT_EX class file `aptpub.cls`, available from <http://www.appliedprobability.org/>. Use of this class file is not a condition of submission, but will considerably increase the speed at which papers are processed.

Papers should be submitted as hard copy or as electronic files (with hard copy back-up). All submissions will be acknowledged on receipt and **must be accompanied by a covering letter stating the author's postal address and affiliation**. Hard copy: Send **all** submissions to the Applied Probability office in Sheffield, and not to individual editors. Two copies of the paper, at least one of which should be double spaced, should be sent to: **Executive Editor, Applied Probability, School of Mathematics and Statistics, University of Sheffield, Sheffield S3 7RH, UK**. Electronic submission: Please email a **double-spaced** PostScript™ (.ps) or portable document format (.pdf) file, not exceeding 1 Mb. **The files must be clearly identified by name in a separate covering message**. The address for email submissions is l.nash@sheffield.ac.uk. Authors should also submit one hard copy to the Executive Editor, as above.

Copyright

The copyright of all published papers is vested in the Applied Probability Trust. When a paper is accepted for publication, the Trust asks the authors to assign copyright by signing a form in which the terms of copyright are listed. Failure to do this promptly may delay or prevent publication.

Authorisation to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by the Applied Probability Trust for libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the corresponding processing and royalty fees (see <http://www.copyright.com>) are paid directly to CCC, 222 Rosewood Drive, Danvers, MA 01923, USA. 0021–9002/09

PRINTED IN EUROPE BY INFORMATION PRESS, OXFORDSHIRE

Volume 46 Number 2

Research Papers

- 309 WOJCIECH NIEMIRO AND PIOTR POKAROWSKI. Fixed precision MCMC estimation by median of products of averages
- 330 TERJE AVEN. Optimal test interval for a monotone safety system
- 342 SUBHASH KOCHAR AND MAOCHAO XU. Comparisons of parallel systems according to the convex transform order
- 353 JI HWAN CHA AND MAXIM FINKELSTEIN. On a terminating shock process with independent wear increments
- 363 OFFER KELLA. On growth-collapse processes with stationary structure and their shot-noise counterparts
- 372 HÉCTOR JASSO-FUENTES AND ONÉSIMO HERNÁNDEZ-LERMA. Blackwell optimality for controlled diffusion processes
- 392 FANG XU. A central limit theorem associated with the transformed two-parameter Poisson–Dirichlet distribution
- 402 AIKO KURUSHIMA AND KATSUNORIO ANO. Maximizing the expected duration of owning a relatively best object in a Poisson process with rankable observations
- 415 ANNA KARPOWICZ. Double optimal stopping in the fishing problem
- 429 AGNÈS LAGNOUX-RENAUDIE. A two-step branching splitting model under cost constraint for rare event analysis
- 453 YUQIANG LI. A weak limit theorem for generalized Jiřina processes
- 463 DANIELA BERTACCHI AND FABIO ZUCCA. Approximating critical parameters of branching random walks
- 479 RONG-LI LIU, YAN-XIA REN AND RENMING SONG. $L \log L$ criterion for a class of super-diffusions
- 497 V. B. YAP. Similar states in continuous-time Markov chains
- 507 JOHAN S. H. VAN LEEUWAARDEN, MARK S. SQUILLANTE AND ERIK M. M. WINANDS. Quasi-birth-and-death processes, lattice path counting, and hypergeometric functions
- 521 ERIC C. K. CHEUNG AND DAVID LANDRIault. Perturbed MAP risk models with dividend barrier strategies
- 542 E. J. BAURDOUX. Last exit before an exponential time for spectrally negative Lévy processes
- 559 XUEMIAO HAO, QIHE TANG AND LI WEI. On the maximum exceedance of a sequence of random variables over a renewal threshold
- 571 ARUP BOSE, AMITES DASGUPTA AND KRISHANU MAULIK. Strong laws for balanced triangular urns

Short Communications

- 585 ANNA PÓSFAL. Poisson approximation in a Poisson limit theorem inspired by coupon collecting
- 593 SVANTE JANSON AND NICLAS PETERSSON. The integral of the supremum process of Brownian motion
- 601 THOMAS M. LIGGETT AND RINALDO B. SCHINAZI. A stochastic model for phylogenetic trees
