

*The Single Journal Designed for the General Hospital Psychiatrist*

# General Hospital Psychiatry

PSYCHIATRY, MEDICINE AND PRIMARY CARE

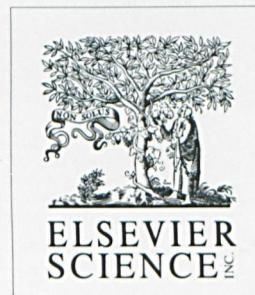

Editor in Chief: Don R. Lipsitt

**G**eneral Hospital Psychiatry is directed towards those members of the health care team who find themselves at the demanding junction of psychiatry, medicine, and primary care: psychiatrists, general and family practitioners, internists, nurses, pharmacologists, psychologists, and health care paraprofessionals.

**General Hospital Psychiatry** publishes original research covering such areas as consultation-liaison psychiatry, neuropsychiatry, pharmacopsychiatry, geropsychiatry, alcohol and substance abuse, law and ethics, the relationship of psychiatric services to general medical

systems, and new directions in medical education that stress psychiatry's role in primary care and family practice. Emphasizing a biopsychosocial approach to illness and health, this leading bimonthly is a critical resource for professionals in in-patient, ambulatory, and community settings. In addition to original articles the journal also features Brief Communications, News and Notes, Book Reviews, and Liaison Rounds.

**Abstracted/Index in:**  
*Biological Abstracts, Cumulative Index to Nursing and Allied Health Literature, Current Contents, Excerpta Medica, Index Medicus, and Psychological Abstracts.*

# STABLON

12,5 mg

Tianeptine

**Composition - présentation :** Boîte de 30 comprimés enrobés, dosés à 12,5 mg de tianeptine (sel de sodium). **Propriétés :** Antidépresseur. *Chez l'animal*, la tianeptine augmente l'activité spontanée des cellules pyramidales de l'hippocampe et en accélère la récupération. *Chez l'homme*, Stablon se caractérise par une activité : - sur les troubles de l'humeur ; - sur les plaintes somatiques liées à l'anxiété et aux troubles de l'humeur ; - sur les troubles du comportement de l'éthylique en période de sevrage. Stablon est dépourvu d'effet : - sur le sommeil et la vigilance ; - sur le système cardiovasculaire ; - sur le système cholinergique (absence de manifestation anticholinergique). **Indications thérapeutiques :** - États dépressifs névrotiques et réactionnels, - états anxiodepressifs avec plaintes somatiques en particulier digestives, - états anxiodepressifs observés chez l'alcoolique en période de sevrage. **Contre-indications :** Enfants de moins de 15 ans, IMAO, grossesse, allaitement. **Précautions d'emploi :** Par principe, surveillance attentive en début de traitement (risque suicidaire inhérent aux états dépressifs), précaution en cas d'anesthésie, information des conducteurs de machine d'un risque potentiel (cf. VIDAL), réduction progressive de la posologie à l'arrêt du traitement. **Interactions médicamenteuses :** IMAO. **Effets indésirables :** Rares, généralement bénins : - gastralgies, douleurs abdominales, bouche sèche, anorexie, nausées, vomissements, constipation, flatulences, - insomnie, somnolence, cauchemars, asthénie, - tachycardie, extrasystoles, précordialgias, - vertiges, céphalées, lipothymies, tremblements, bouffées de chaleur, - gêne respiratoire, boule dans la gorge, - myalgies, lombalgies. **Posologie et mode d'administration :** 3 comprimés par jour, matin, midi et soir. *Chez l'alcoolique*, cirrhotique ou non, aucune modification posologique n'est nécessaire. Chez les sujets de plus de 70 ans et en cas d'insuffisance rénale, 2 comprimés par jour. C.T.J. de 4,82 F à 7,23 F. Liste I. AMM : 329.339.1. Prix : 72,30 F. Remb. Séc. Soc. 65%. Collect. Laboratoire ARDIX, 25, rue Eugène-Vignat, 45007 Orléans. Pour plus d'informations se reporter au Vidal.
