

# BRANCHING AND APPLIED PROBABILITY

**Papers in honour of**  
PETER JAGERS

**Edited by**  
S. ASMUSSEN, F. KLEBANER, O. NERMAN  
and V. VATUTIN

This volume honours the lifelong contributions of Peter Jagers, who turned 75 in 2016. He has been an instrumental figure in the community in applied probability and stochastics in general in his roles as one of the leaders in the area of branching processes, in professional societies and in the Scandinavian stochastics environment, as well as the efforts he has made in conveying communication and interaction between scientists in the West and in the East.

The volume contains twenty invited scientific papers by authors, who all in some sense have interacted with Peter Jagers or otherwise have been close to him. In addition, there are some personal memories by himself, some recollections by Eugene Seneta, and a sketch of his merits as an academic leader and colleague by Olle Nerman.
