### RADIOCARBON SUPPLEMENT

Editors: Richard Foster Flint—Edward S. Deevey, Jr.

Managing Editor: Elizabeth G. Weinman

Published annually, in May, at Sterling Tower, Yale University, New Haven, Connecticut. Subscription rate \$4.50 a year (Volume 1 will be sold for \$2.50 until 1 January 1960).

#### INSTRUCTIONS TO CONTRIBUTORS

Manuscripts of radiocarbon papers should follow the recommendations in the pamphlet Suggestions to Authors, 5th ed.\* Date lists need not be preceded by abstracts, but abstracts should accompany all papers (e.g. geochemical contributions) that are directed to specific problems, All copy must be typewritten in double space (including the biblography); it is requested that manuscripts be submitted in dupplicate.

Descriptions of samples should follow as closely as possible the style shown in this volume. Each description should include the following data, if possible in the order given:

- 1. Laboratory number, descriptive name (ordinarily that of the locality of collection), and date expressed in years R.P. (before present). The standard error following the date should express, within limits of  $\pm 1 \sigma$ , the laboratory's estimate of the accuracy of the radiocarbon measurement, as judged on physicochemical (not geologic or archaeologic) grounds.
- 2. Substance of which the sample is composed; if a plant or animal fossil, the scientific name if possible; otherwise the popular name; but not both. Also, where pertinent, the name of the person identifying the specimen.
- 3. Precise geographic location including latitude-longitude coordinates.
- 4. Occurrence and stratigraphic position in precise terms.
- 5. Date of collection and name of collector.
- 6. Name of person submitting the sample to the laboratory, and name and address of institution or organization with which submitter is affiliated.
- 7. Any further necessary explanations.
- 8. Reference to relevant publications. Citations within a description should be to author and year, with specific pages wherever appropriate, except that references (e.g. to published date lists) that are frequently repeated may be simplified by use of a code (e.g. Groningen III) that is explained in the bibliography. Full bibliographic references are listed alphabetically at the end of the manuscript, in the form recommended in the pamphlet Suggestions to Authors, which is also the standard used for abbreviating names of periodicals, etc.
- 9. Comment, usually comparing the date with other relevant dates, for each of which sample numbers and references must be quoted, as prescribed above. Technical matters, e.g. chemical pretreatment, special laboratory difficulties, etc., should be included here.

Illustrations should be neat and legible and should include explanation of symbols used. They should be capable of reduction to not more than 4½ by 7 inches, all lettering being at least 1/16th inch high after reduction. Line drawings should be in black India ink on white or blue. Photographs should be positive glossy prints. Illustrations should be numbered consecutively through each article. In general, originals of illustrations should be submitted, but photographic reproductions of line drawings are sometimes acceptable, and should accompany the manuscript in any case if the originals exceed 9 by 12 inches in size.

Reprints. Thirty separate copies of each article will be furnished to the author free of cost; these will be without a cover, Additional copies will be furnished at cost. Printed covers can be furnished, if specially ordered.

\* Suggestions to authors of the reports of the United States Geological Survey, 5th ed. Washington, D. C., 1958 (Government Printing Office, \$1.75).
