Giant Somatosensory Evoked Potentials Coincident With Epileptiform Discharges in Acutely Comatose Patients

David A. Houlden, Mark I. Boulos, Brian J. Murray, Loretta Norton, G. Bryan Young

Original Article – Can J Neurol Sci. 2015; 42: 320

Figure: Twenty-channel EEG (anteroposterior bipolar montage) recorded 1 day after cardiac surgery from patient 1, who was on propofol. He received tranexamic acid before and during surgery. Arrows indicate rare interictal spike and wave discharges generally less than one every 10 seconds (no more frequent than 1 Hz); maximal around the right frontal/temporal regions.

Our Major Supporters

The CNSF's relationship with all its sponsors, exhibitors and supporters is an excellent one; based on honesty, integrity and transparency.

Industry supports the CNSF throughout the year; at our Congress, through our Journal and in our other CPD activities. Industry is very generous year after year in their provision of unrestricted and unconditional grants to the CNSF.

The CNSF's major supporters are listed below, none of whom have had any input into the CNSF's CPD programs, nor the Congress sessions they support. Our supporters are not involved in the selection of any of the Congress courses, program content or speakers.

THANK YOU.

The CNSF values the support it has received in 2015 from...
