## **Scientific Explanation and the Causal Structure of the World**

*Wesley C. Salmon*

"In this provocative work Salmon develops a theory of causal relations which he conjoins with a modified version of his statistical relevance account to produce a much improved account of scientific explanation. This genuinely new and insightful approach should stimulate much productive discussion.—*Frederick Suppe, University of Maryland*  
LPE \$14.50. C \$35.00

## **Science and Scepticism**

*John Watkins*

This book is likely to become the Popperian school's major reply to the criticisms of its epistemology of science. Watkins argues that the statements that compose the empirical basis for science, though unverifiable, can be rationally accepted, and that the theory that is best corroborated in its field is the one that best fulfills this optimum aim.

LPE \$14.50. C \$44.00

## **Galileo and His Sources**

**The Heritage of the Collegio Romano  
in Galileo's Science**

*William S. Wallace*

Demonstrating the importance of two early manuscripts of Galileo dismissed by earlier researchers as juvenile exercises, Wallace clarifies not only the essential continuity of Galileo's work but the way he built on these foundations to erect the science of his later years.

## **SELF AND NATURE IN KANT'S PHILOSOPHY**

Edited by ALLEN W. WOOD. This book is made up of eleven essays that deal with fundamental aspects of Kant's philosophy. Among the issues addressed are those of self and free will, Berkeley's idealism, Kant's view of the natural world, and Kant's philosophy of mind and science. \$9.95 paper; \$29.95 cloth

## **THE SCIENTIFIC REINTERPRETATION OF FORM**

By NORMA E. EMERTON. The book traces the concept of form—one of the most important and persistent elements in natural philosophy—from its origins in Plato and Aristotle to the beginnings of the nineteenth century. \$29.95

## **EPICURUS' SCIENTIFIC METHOD**

By ELIZABETH ASMIS. Describing and analyzing the scientific method and physical theories of Epicurus, the author asserts that he had a far more coherent and systematic approach to scientific inquiry than has previously been recognized. \$49.50

## **MATHEMATICS IN PHILOSOPHY**

*Selected Essays*

By CHARLES PARSONS. The first book by a major American philosopher brings together eleven essays. A common point of view—that mathematical thought is central to our thought in general—underlies the essays, and in his introduction, written especially for this volume, Parsons relates this point of view to past and present discussions of the foundations of mathematics. \$42.50

Three new books in the  
**Pittsburgh Series in Philosophy and  
History of Science**

**The Foundations of Psychoanalysis**

A Philosophical Critique

by **ADOLF GRÜNBAUM**

A world-renowned philosopher of science offers this long-awaited first systematic and comprehensive philosophical examination of Freud's own arguments for his theoretical and therapeutic exercise. "This book, by one of our most distinguished philosophers of science, will be the starting point for future discussion of whether Freudian theory has adequate evidential foundations. Whether or not one accepts Grünbaum's conclusions, one must be grateful for his careful and thorough treatment of the subject."—Richard Rorty "The work of a first-class mind doing what it does best. For its rigor and thoroughness, no one interested either in psychoanalysis or in hermeneutics can afford to ignore it."

—William J. Richardson \$16.95

**Science and Values**

The Aims of Science and Their Role in Scientific Debate

by **LARRY LAUDAN**

How are we to explain the simultaneous and widespread presence of both agreement and disagreement in science? Laudan argues that a fresh approach to scientific rationality—one which stresses the centrality of values and the interdependence of values, methods, and facts—is required before the two puzzles of consensus and dissensus can be solved within a consistent framework. \$16.95

**The Limits of Science**

by **NICHOLAS RESCHER**

In his 1978 work, *Scientific Progress*, Rescher examined the practical, and specifically the economic, obstacles to scientific progress. In this new work, he considers the existence of limitations on scientific inquiry that could *in principle* preclude the full realization of the aims of science. \$24.95

**Scientific Realism**

Edited by **JARRETT LEPLIN**

A "state of the question" discussion of remarkable breadth. Contributors include Bas van Fraassen, Larry Laudan, Arthur Fine, Ernan McMullin, Richard Boyd, Ronald Laymon, Michael Levin, Ian Hacking, Clark Glymour, Hilary Putnam, and Jarrett Leplin. \$25.00 hardcover, \$9.95 paperback

# The Life of Science from Chicago

## Constructing Quarks

*A Sociological History  
of Particle Physics*

**Andrew Pickering**

Pickering has written an account of the development of the field of particle physics that is accessible to anyone with a basic scientific education. His aim is not to explain technical matters per se but to show how knowledge is developed and transformed in the course of scientific practice.

**Cloth \$30.00 480 pages Illus.**

## Cause, Experiment, and Science

*A Galilean Dialogue  
Incorporating a New  
English Translation of  
Galileo's "Bodies That Stay  
atop Water, or Move in It"*

**Stillman Drake**

"A valuable contribution to the history of science by the world's foremost Galilean scholar."

— *Choice*

**Paper \$9.95 268 pages Illus.**

## The Scientist's Role in Society

*A Comparative Study  
With a new Introduction*

**Joseph Ben-David**

Ben-David analyzes the institutional character of science today in a discussion of the conditions that have shaped the emergence and development of the social role of the scientist.

**Paper \$8.95 224 pages**

## Zoological Philosophy

*An Exposition with Regard to  
the Natural History of Animals*

**J. B. Lamarck**

*With introductory essays by  
David L. Hull and*

**Richard W. Burckhardt, Jr.**

Today Lamarck is generally credited with having been the first major proponent of the idea of organic evolution, and his *Zoological Philosophy*, the major alternative to Darwin's theory, is one of the most important texts of nineteenth-century biological thought.

**Paper \$15.00 524 pages**

## The Dark Abyss of Time

*The History of the Earth and  
the History of Nations from  
Hooke to Vico*

**Paolo Rossi**

*Translated by Lydia G. Cochrane*

This study by the noted historian of ideas, here translated from the Italian for the first time, describes the impact on European thought of the discoveries that challenged established biblical chronology.

Rossi recounts the heated debates sparked by the idea of enormous antiquity, and his learned discussion revises virtually all the current interpretations of Vico's thought.
