

# Instructions to authors

Detailed instructions to authors are available online here:  
[cambridge.org/core/journals/journal-of-glaciology/information](https://cambridge.org/core/journals/journal-of-glaciology/information)

## The *Journal of Glaciology* publishes three types of paper:

- Articles - concerning new findings and theories, or new instruments and methods, in glaciology; or review articles that offer an up-to-date, coherent account of a glaciological subject that is developing rapidly or has been neglected
- Letters - identical in form and general content to Articles, but of reduced length, and carrying substantially reduced processing charges
- Communications - short pieces without abstracts that could be, e.g., comments on published articles/letters, book reviews, or short correspondence on topics of interest to the community

## Papers submitted should be:

- of high scientific quality
- complete and clear
- substantially different from previously published work.

## Length

Papers should be concise. Lines and pages should be numbered. Letters are limited to five *Journal* pages (one *Journal* page = about 1000 words).

## Original submission

Submit your paper via the *Journal of Glaciology* online submission system at <https://mc.manuscriptcentral.com/jog>

## Review process

Your paper will be peer reviewed by at least two reviewers. The Scientific Editor will discuss any alterations required to the paper. The Associate Chief Editor will inform you if and when your paper is accepted for publication. Papers written in poor English will be rejected without review.

You will be sent a proof of your text and illustrations to check and correct (you will have to pay for any substantial alterations made at this stage).

## Final submission

The final accepted version of the paper should be in electronic format.

- Acceptable formats are
  - Text (including tables and figure captions) – Word, rtf or LaTeX (the IGS class file should be used; downloadable from the website). Please also supply a final PDF
  - Figures – ideally in tif or eps format (or otherwise in the format in which they were created)
- Responsibility for the accuracy of all data (including references) rests with the authors

## Supplementary material

The *Journal of Glaciology* accepts and makes available online appropriate supplementary material. It should be clearly named and labelled and provided in standard file formats.

## General points

- Title should be concise
- Abstract should be less than 200 words

- Papers should be divided into numbered sections with short section headings
- Use SI units
- Use internationally recognized systems of abbreviation
- Illustrations should
  - be one or two column widths: up to 85 mm or up to 178 mm
  - not be in boxes
  - use strong black lines (avoid tinting if possible)
  - use SI units in labels
  - use Optima, Arial or a similar sans serif font in labels
- TeX authors: please provide a pdf of the whole paper (text, tables, figures and captions) as well as the individual LaTeX and graphics files
- Equations should
  - be set in MathType or advanced equation editor
  - NOT be embedded as graphics in the text
- Tables should
  - be numbered in Arabic
  - be referred to in text (as Table 1 etc.)
  - NOT be submitted as illustrations
- All citations in text should include the author name(s) and the year of publication (e.g. Smith, 2010; Smith and Jones, 2012; Smith and others, 2014) and must have an entry in the reference list
- Reference lists should
  - be concise
  - be complete and accurate, including doi numbers
  - be provided in precise *Journal* format, including punctuation and emphasis (see past papers for style)
  - be arranged in alphabetical order by first author's surname
  - include works accepted but not published as 'in press'
  - not include personal communications, unpublished data or manuscripts in preparation or submitted for publication (these should be included in the text)

## Open Access and page charges

As a gold open access journal, the *Journal of Glaciology* is published without restriction and receives no subscription revenue. The costs of publication are instead covered by an article publishing charge (APC) levied upon the corresponding author, or his/her funding body or institution.

The APC for non-IGS members is £1,320 for a regular article (of 6 published pages or more), £660 for a letter (of 5 published pages or fewer) and communications (of 2 published pages or fewer). IGS members receive a 10% discount on these charges.

Figures quoted here are correct for 2019.

Upon acceptance for publication the corresponding author will be contacted by Rightslink on behalf of Cambridge University Press, who will administer the collection of the article publishing charge. At that stage the corresponding author can pay by credit card or arrange for an invoice to be issued to his/her funding body or institution. Selected authors may be granted an APC waiver by the IGS. In such cases, a waiver code shall be provided, which should be issued to Rightslink upon receipt of the payment.

# Journal of GLACIOLOGY

CONTENTS Vol 65 No 251 2019

347–365 **Glacial lake evolution and glacier–lake interactions in the Poiqu River basin, central Himalaya, 1964–2017**

Guoqing Zhang, Tobias Bolch, Simon Allen, Andreas Linsbauer, Wenfeng Chen, Weicai Wang

366–375 **Changes in glacier volume on Mt. Gongga, southeastern Tibetan Plateau, based on the analysis of multi-temporal DEMs from 1966 to 2015**

Bo Cao, Baotian Pan, Weijin Guan, Zhenling Wen, Jie Wang

376–394 **Loss of floating glacier tongues from the Yelverton Bay region, Ellesmere Island, Canada**

Adrienne White, Luke Copland

395–409 **The geodetic mass balance of Eyjafjallajökull ice cap for 1945–2014: processing guidelines and relation to climate**

Joaquín M. C. Belart, Eyjólfur Magnússon, Etienne Berthier, Finnur Pálsson, Guðfinna Aðalgeirsdóttir, Tómas Jóhannesson

410–421 **Surface elevation changes on Lachman Crags ice caps (north-eastern Antarctic Peninsula) since 1979 indicated by DEMs and ICESat data**

Zbyněk Engel, Jan Kropáček, Jana Smolíková

422–439 **Glacier mass balance over the central Nyainqntanglha Range during recent decades derived from remote-sensing data**

Kunpeng Wu, Shiyin Liu, Zongli Jiang, Junli Xu, Junfeng Wei

440–452 **Seven decades of uninterrupted advance of Good Friday Glacier, Axel Heiberg Island, Arctic Canada**

Dorota Medrzycka, Luke Copland, Wesley Van Wychen, David Burgess

453–467 **GlacierMIP – A model intercomparison of global-scale glacier mass-balance models and projections**

Regine Hock, Andrew Bliss, Ben Marzeion, Rianne H. Giesen, Yukiko Hirabayashi, Matthias Huss, Valentina Radic, Aimée B. A. Slanger

468–480 **Semi-automated open water iceberg detection from Landsat applied to Disko Bay, West Greenland**

Jessica Scheick, Ellyn M. Enderlin, Gordon Hamilton

481–493 **On the retrieval of sea-ice thickness using SMOS polarization differences**

Mukesh Gupta, Carolina Gabarro, Antonio Turiel, Marcos Portabella, Justino Martinez

494–507 **Karakoram geodetic glacier mass balances between 2008 and 2016: persistence of the anomaly and influence of a large rock avalanche on Siachen Glacier**

Etienne Berthier, Fanny Brun

508–517 **Interannual climate variability helps define the mean state of glaciers**

Andrew G.O. Malone, Alice M. Doughty, Douglas R. Macayeal

**Letter**

518–521 **Premelting increases the rate of regelation by an order of magnitude**

Alan W. Rempel, Colin R. Meyer

Published for the International Glaciological Society, Cambridge, UK
