The Journal of Laryngology and Otology

(FOUNDED in 1887 by MORELL MACKENZIE and NORRIS WOLFENDEN)

EDITED BY

G. H. BATEMAN

ASSISTANT EDITOR

LIONEL TAYLOR

1. Original articles which have not been published elsewhere are invited and should be sent to the Editor. They are considered for publication on the understanding that they are contributed to this *Journal* solely. Reproduction elsewhere, in whole or in part, is not permitted without the previous written consent of the Author and Editor and the customary acknowledgement must be made.

2. Manuscripts should be typewritten, on one side only of the paper, and well spaced. Captions to illustrations should be typed on a separate sheet and sent at the same time as original photographs, etc.

The Harvard system of recording references should be used, e.g. GREEN, C., and BROWN, D. (1951) *J. Laryng.*, 65, 33. Abbreviations of Journals should follow the style recommended in *World Medical Periodicals*, published by World Health Organization, 1952.

It is most important that authors should verify *personally* the accuracy of every reference before submitting a paper for publication.

3. Galley proofs and engraver's proofs of illustrations are sent to the author. Corrections, which should be kept to a minimum, must be clearly marked, and no extra matter added. Proofs should be returned within 5 days.

4. Illustration blocks are provided free up to the limit of £10 per article; beyond this authors are expected to pay half the cost. Coloured illustrations will be charged in full to authors.

Blocks will normally be held by the Printers for three years after which they will be destroyed. Any author who has borne a part of the cost of his blocks is entitled to have these returned to him, but a request for this must be sent within three years of the appearance of the article, to HEADLEY BROTHERS, 109 Kingsway, London, WC2.

5. Orders for reprints must be sent when returning galley proofs, and for this purpose special forms are supplied.

6. Authors of original communications on Oto-Laryngology in other journals are invited to send a copy, or two reprints, to the *Journal of Laryngology*. If they are willing, at the same time, to submit their own abstract (in English, French, Italian, or German) it will be welcomed.

7. Editorial communications may be addressed to THE EDITOR, *Journal of Laryngology*, c/o HEADLEY BROTHERS, 109 Kingsway, London, WC2.

8. The annual subscription is four guineas sterling (U.S.A. \$13) post free, and is payable in advance.

9. Single copies will be on sale at 10s. 0d. each; copies of parts up to Vol. LXIII which are available may be purchased at 7s. 6d. each.

10. All subscriptions, advertising and business communications should be sent to the publishers, HEADLEY BROTHERS, 109 KINGSWAY, LONDON, WC2.

United States of America

Orders for this *Journal* may be sent through local bookseller, or to STECHERT-HAPNER, INC., 31-33 East 10th Street, New York, or direct to the publishers, HEADLEY BROTHERS, 109 KINGSWAY, LONDON, WC2, England.

SURGICEL

ABSORBABLE
HAEMOSTAT

Bleeding from the anterior aspect of the nasal cavity is readily controlled by the application of SURGICEL* to the bleeding site. The SURGICEL* is removed 12 to 24 hours after application without fear of provoking further bleeding.

A MAJOR ADVANCE IN HAEMOSTASIS

effective control of difficult bleeding

SURGICEL haemostatic gauze completely controls capillary and venous oozing. Its use increases the range and safety of surgical procedures on highly vascular areas.

easily handled

SURGICEL is more easily handled than other agents in this field. It does not fragment, can be sutured in position and adheres closely to the site of bleeding but does not cling to gloves or instruments.

completely absorbed

SURGICEL is made from oxidized regenerated cellulose. It is absorbed with minimum tissue response and may be safely left *in situ*. No case of intolerance or sensitivity has been recorded.

'PETERS' NEW CLINIC AUDIOMETER

FOR PURE-TONE AND SPEECH

CONSIDER THESE FEATURES :

- A continuous frequency range with continuous automatic threshold compensation.
- Twin continuously variable attenuators accurate to 1 db.
- Narrow band masking of pure tones plus insert receiver.
- Manual or automatic completely silent interruption.
- Loudness Balance and Difference Limen Recruitment Tests.
- High Fidelity Speech Circuit with Accessories for Free Field Speech Audiometry.
- Full Spectrum of White Noise for Masking Speech.
- Completely Transistorised for reliability.

The Westrex Company Limited, who are leading suppliers of Deaf Education Equipment, have a nationwide servicing organisation. In the immediate future their engineers in the field will be co-operating in the speedy servicing of all "Peters" audiometers in Great Britain.

Write for a descriptive brochure giving full details of this magnificent instrument and ask for a demonstration from either :

*“Strike, but
hear me”*

Themistocles

And the reply was *μαρτυδία* which is hardly surprising when you consider that in that helmet he could hardly have heard him anyway.

Fortunately, few, if any, patients wear Grecian helmets these days and most are delighted to have the name of an independent hearing aid consultant of impeccable reputation murmured tactfully into their ears.

Today more people than ever before can benefit from a carefully selected aid. But careful selection is important. INGRAMS, the Independent Suppliers, have twenty-six different makes – the largest selection in the country – for patients to choose from. Couple this with expert impartial advice and a high reputation and you have the reason why so many E.N.T. Specialists refer their patients to Ingrams.

**First clinical audiometer
to provide
100% accurate audiograms**

AMPLIVOX MODEL 82

world's most fully-developed clinical audiometer

It is now known that the disc type of earphone, used in conventional audiometers for air conduction testing and the application of masking noise, transfers the sound by bone conduction to the opposite ear at a level only 40 dB below the signal level. This means that up to 50% of audiograms taken at the present time with other audiometers may be invalid.

The Amplivox Model 82 Audiometer provides, for the first time, the means of taking accurate audiograms in cases of severe unilateral deafness through the provision of narrow band masking applied by insert earphone. This new masking technique is of special significance in bone conduction audiometry.

In addition to the exclusive narrow band masking feature, the Model 82 provides loudness balance test facilities, and all the other tests essential to proved pure tone audiometry.

'Diconal' Tablets for relief of intractable pain

'Diconal' Tablets provide analgesia comparable with that produced by morphine. They are therefore of great value in carcinoma. Because the tablets are given by mouth and not by injection, the patient can be kept oblivious of the fact that his condition calls for so potent an analgesic.

'Diconal' Tablets contain dipipanone and cyclizine. Dipipanone relieves severe pain; cyclizine appreciably reduces the incidence of nausea and vomiting, even in patients new to this type of therapy.

'Diconal' Tablets are:

Of high value in relief of pain due to neoplastic disease, and other conditions where narcotic drugs would be employed.

A balanced formulation which permits flexibility in dosage, according to the needs of each patient.

Often effective in morphine- and pethidine-resistant cases.

'Diconal' Tablets are subject to the D.D.A.

'Diconal' brand Tablets

Each tablet contains dipipanone hydrochloride, B.P.C. 10mg., and cyclizine hydrochloride, B.P.C. 30 mgm. Coloured red and scored for easy division.
