

Analytical Methods for Use in Geochemical Exploration

R. E. Stanton

A compact laboratory handbook of the analytical methods currently used in geochemical exploration. The author emphasises the need for strict statistical control of results. He deals briefly with the colorimetric methods which are still useful, before proceeding to discuss analysis by atomic absorption spectrophotometry and X-ray fluorescence spectrometry and the application of emission spectrography. The chapter on cold extraction techniques will be of particular interest to geologists. The procedures have been thoroughly tested, and a technician with no detailed knowledge of the analytical processes involved can readily follow the directions.

Paper £2.20

Geological Maps and their Interpretation

F. G. H. Blyth

Second edition SI Units

Maps presenting a selection of more complex problems than material based on regular geometry and dip. For geography, geology and civil engineering students who have had a grounding in elementary mapping exercises.

Paper £1.75

An Introduction to the Chemistry of Rocks and Minerals

M. B. Perrin

Studies in Chemistry

The application of chemistry to geology, mineralogy and mineral technology for sixth-form and technical college students and undergraduates taking introductory courses.

Cloth £3.80 Paper £1.90

Edward Arnold

25 Hill Street, London W1X 8LL

Mesozoic and Cenozoic Paleocontinental Maps

A. G. SMITH and J. C. BRIDEN

A book of computer generated maps, showing provisional positions of the major continental areas during the past 220 million years. A short explanatory text introduces the maps and the book will be useful to students, teachers and research workers dealing with any geological problems of global extent in fields as separated as paleontology, stratigraphy, geochemistry and tectonics.

Paperback Edition

Applied Geophysics

**W. M. TELFORD, L. P. GELDART, R. E. SHERIFF
and D. A. KEYS**

A comprehensive textbook of exploration geophysics that describes the various methods that are available for locating deposits of oil, natural gas and minerals. A valuable work of reference for exploration geophysicists and a textbook for students at the graduate level.

'The book is a very good one, written and illustrated with clarity.' *Nature*

Also available in hard covers

Paperback £9.75 net

CAMBRIDGE UNIVERSITY PRESS

NOTES FOR CONTRIBUTORS

Contributions for publication should be addressed to The Editors, *Geological Magazine*, Sedgwick Museum, Downing Street, Cambridge CB2 3EQ, England.

All contributions, whether articles, correspondence or reviews, must be typed in duplicate on one side of the paper, double spaced throughout, with a wide margin on the left of each page and a narrower margin on the right. Any minor corrections should be made neatly in the typescript, leaving the margins clear.

The total length of a paper should not in general exceed 20 pages of the *Geological Magazine*; preference and priority are given to short papers. Longer papers (between 20 and 40 pages of *Geological Magazine*) will from time to time be considered, but authors wishing to submit such manuscripts should first request further details.

The accuracy of references is the responsibility of authors. References must be double spaced and abbreviated in the form of the *World List of Scientific Periodicals* 4th Edition as far as possible, e.g. Lapworth, C. 1878. The Moffat Series. *Q. Jl geol. Soc., Lond.* **34**, 240–343. Books should be cited briefly as: Burns, R. G. 1970. *Mineralogical applications of crystal field theory*. 224 p., C.U.P., London. Unpublished work, e.g. from theses, should normally be referred to in the text in parentheses and not included in the reference list unless in the press.

Articles must be accompanied by a brief summary. Contributions should follow the general style of papers in recent issues of the Magazine and the principles laid down in *Notes to Authors (Proc. Geol. Soc. Lond., No. 1627. Oct. 1965)*. Headings should be set out clearly, but not underlined. Primary headings should be in lower case, at margin, with arabic numeral; sub-headings should be numbered 2.a, 2.b, etc., and tertiary headings 2.a.1., 2.a.2. No cross-references should be given by page number, but 'above' and 'below' should be used with the section specified, e.g. Section 2.a.1.

Illustrations must be drawn to allow reduction to maximum size of 200 mm × 134 mm; originals must not exceed 600 mm × 402 mm and must be sent in a flat package. Lettering must allow for legibility after reduction (i.e. equivalent to 1 mm as a minimum on reduction). Duplicates of illustrations may be prints or, preferably, reductions. Metric units of the SI system are preferred. Illustrations in the text will be referred to as figures (Fig. 2, 2a, etc.), and halftone plates will be referred to (also in arabic) as Plates 2, 2a, etc. Folding plates will not be accepted. Captions for figures and plates must be typed on separate sheets.

Twenty-five offprints of each paper will be provided free of charge. Additional offprints may be purchased according to a set scale of charges.
