<i>Foreword</i>	xiii
John G. Robinson	
<i>Preface</i>	xvii
<i>Acknowledgements</i>	xx
<i>List of Abbreviations</i>	xxi
1 Eating Wild Animals	1
1.1 Introduction	1
1.2 Meat Eating and Hunting in Human Evolution	5
1.3 Importance of Wild Animal Foods in Human Diets	7
1.4 Species Hunted for Wild Meat	11
1.4.1 Mammals	12
1.4.2 Birds	14
1.4.3 Reptiles and Amphibians	15
1.5 Regional Differences in Species Hunted for Wild Meat	16
1.6 Indigenous and Rural Peoples Hunt Differently	18
1.7 Understanding Urban Wild Meat Markets	20
1.8 How Much Wild Meat Do People Eat?	28
1.9 The Aim of This Book	34
2 The Backdrop	38
2.1 Introduction	38
2.2 Defining Tropics and Subtropics	39
2.3 Main Biomes within the Tropics and Subtropics	40
2.4 Wildlife Communities in Tropical and Subtropical Habitats	42
2.5 Wildlife Biomass and Primary Productivity	44
2.6 Available Huntatable Mammalian Biomass Variation	50
2.6.1 General	50
2.6.2 Comparing Continents	52
2.7 Pressures Affecting Wild Species	62

2.8	Global Consumption of Wild Meat and Future Trends	66
2.9	Overhunting: The Consequences of Increasing Demand	69
3	How Human Hunters Hunt	75
3.1	Introduction	75
3.2	Hunting Technology	77
3.2.1	Projectile Hunting: Changes for the Better	78
3.2.2	Nets, Traps, Snares and Other Methods	81
3.3	Modern Hunting Techniques	84
3.3.1	Hunters Use Many Different Technologies	95
3.3.2	Techniques Differ between Neighbouring Villages and Regions	96
3.3.3	Firearms Are the Dominant Hunting Technology Today	98
3.3.4	Modern Snares Are the Second Most Utilized Hunting Technology Globally	102
3.3.5	Traditional Hunting Technology Generally Augments Modern Technology Today	105
3.4	The Hunters	113
3.5	Cultural Hunting Aspects	116
3.6	The 'Ecologically Noble Savage' Debate	120
4	Hunting Optimally	123
4.1	Introduction	123
4.2	Optimal Foraging Theory Models	124
4.3	Cultural Settings and the Optimal Foraging Theory	132
4.4	Optimal Foraging Theory Applied to Human Foraging and Its Critics	134
4.5	Alternatives to the Optimal Foraging Theory Models	136
4.5.1	Theory of the Prudent Predator or Intelligent Predator	136
4.5.2	Theory of Passive Selection of Prey	137
4.5.3	Robust-Satisficing Model	138
4.5.4	Optimal Stopping Diet Choice Model	138
4.6	Prey Selection	139
4.7	Selection of the Foraging Space	140

4.8	Group Hunting <i>versus</i> Individual Hunting	142
4.9	Sexual Division of Hunting Roles	143
4.10	Handling and Distribution Strategies of Catches	144
4.11	Conservation and Sustainability	145
5	Estimating Sustainability	149
5.1	Introduction	149
5.2	Growth Rate and Maximum Sustainable Yield	150
5.3	Indices Quantifying Population Trends over Time	153
5.3.1	Direct Surveys of Population Density	154
5.3.2	Catch Per Unit Effort over Time	155
5.4	Indices Based on Full Demographic Models	157
5.4.1	Estimation of the Population Growth Rate	160
5.4.2	Population Viability Analysis and the Madingley General Ecosystem Model	162
5.5	Quantitative Indices Based on Surplus Production Models	162
5.5.1	Maximum Sustainable Yield Model	164
5.5.2	Robinson and Redford Index	165
5.5.3	Bodmer A and B Indices	166
5.5.4	US National Marine Fisheries Service Index	167
5.5.5	Modelling Parameter Uncertainty	169
5.6	Early Warning Systems	171
5.6.1	Comparing Populations between Sites	171
5.6.2	Differences in Harvest Characteristics	173
5.6.3	Changes in Body Mass	175
5.6.4	Market Indices	178
5.7	Ecosystem-Based Management	181
5.7.1	Ecosystem-Based Fisheries Management	181
5.7.2	Shifting from Biological Indicators to Resilience Analysis for Wild Meat	184
5.8	Putting the Theory into Practice	188
5.9	Final Considerations	191
6	Use and Overuse	192
6.1	Introduction	192
6.2	Global Wild Meat Extraction Estimates	192
6.3	Evidence of Sustainability	197

6.4 Drivers of Extraction	200
6.4.1 Wealth and Proximity to Wildlife Areas	200
6.4.2 Non-wealth Factors	204
6.5 Spatial Patterns of Extraction	206
6.6 Estimates of Overextraction	213
6.7 Defaunation	215
6.7.1 Defaunation Index	220
6.7.2 Ecological Consequences of Defaunation	221
7 Wild Meat and Zoonotic Diseases	226
7.1 Introduction	226
7.2 Re-emergent Zoonotic Diseases	228
7.2.1 Plague	229
7.2.2 Yellow Fever	230
7.3 Pandemic Zoonotic Emerging Infectious Diseases	230
7.3.1 COVID-19	231
7.3.2 HIV/AIDS	233
7.3.3 Ebola	235
7.3.4 SARS	238
7.4 Other Zoonotic Infectious Diseases	238
7.4.1 Anthrax	239
7.4.2 Hepatitis Viruses	239
7.4.3 Lassa Virus	239
7.4.4 Marburg Virus	240
7.4.5 Mayaro Virus	240
7.4.6 Monkeypox Virus	240
7.4.7 Nipah Virus	241
7.4.8 Simian Foamy Virus	242
7.4.9 T-lymphotropic Viruses	242
7.4.10 Tularemia	243
7.4.11 Others	243
7.5 Risk Factors for Zoonotic Disease Emergence	245
7.5.1 Hosts	245
7.5.2 Wild Meat Hunting and Trade	245
7.5.3 Environmental Change	251
7.5.4 Poverty	255
7.6 Solutions	256

8 Closing the Gap	266
8.1 Introduction	266
8.2 Achieving Sustainable Wild Meat Use	266
8.2.1 Improving the Sustainability of Local Wild Meat Supply	267
8.2.2 Understanding the Drivers at a Landscape Level	274
8.3 Governance and Legal Control of Wild Meat Use	278
8.3.1 International Conventions	278
8.3.2 Regional Governance Related to the Wild Meat Sector	282
8.3.3 The Challenge of Legislating for Subsistence Hunting and Limited Sale	286
8.4 Reducing the Demand for Wild Meat	290
8.4.1 Stemming Increased Commercialization of the Wildlife Harvest	290
8.4.2 Substituting with Other Meat Alternatives	292
8.5 Balancing Conservation and Needs of Rural and Indigenous Peoples	295
8.6 Concluding Remarks	298
<i>Appendix 1 Species and Genera</i>	305
<i>Appendix 2 Glossary</i>	309
<i>References</i>	319
<i>Index</i>	403
