● **AIMS AND SCOPE**

Linguistic pragmatics has been able to formulate a number of questions that are essential to our understanding of

An Interdisciplinary Monthly of Language Studies

Commenced publication 1977

NORTH-HOLLAND
(IMPRINT: ELSEVIER SCIENCE)

language as humans' main instrument of "natural" and "societal" interaction. By providing possible theoretical foundations for the study of linguistic practice, linguistic pragmatics has helped to increase our knowledge of human interaction. The *Journal of Pragmatics* identifies with the above general scope and aims of pragmatics. In addition, the journal will attempt to narrow the distance between such fields as sociolinguistics, psycholinguistics, computational linguistics (including the information sciences, artificial intelligence research and, in general, the theory and practice of machine-human interaction), applied linguistics (including the theory and practice of language teaching and learning), psychiatry (including the study of schizophrenic speech). The journal will also endeavour to cover the "shady" areas between these fields and between linguistics and the neighboring disciplines. The *Journal of Pragmatics* welcomes both those contributions originating in linguistics proper and those taking neighboring, related fields as their point of departure. Recently the *Journal of Pragmatics* also has begun to publish focus-on-issues on broad subject areas of general interest to different groups of readers. "Special Issues" devoted to a single topic are regularly published.
