# The Journal of Laryngology and Otology

(Founded in 1887 by MORELL MACKENZIE and NORRIS WOLFENDEN)

EDITED BY  
WALTER HOWARTH

ASSISTED BY  
W. M. MOLLISON

1. Original Articles are accepted on the condition that they have not been published elsewhere.

2. Manuscripts should be typewritten, on one side only of the paper, and well spaced.

3. Galley proofs and engraver's proofs of illustrations are sent to the author. Corrections, which should be kept to a minimum, must be clearly marked and no additional matter added.

4. Orders for reprints should be sent when returning galley proofs, and for this purpose special forms are supplied, on which the price of the reprints is stated.

5. Authors of Original Communications on Oto-Laryngology in other Journals are invited to send a copy, or two reprints, to the *Journal of Laryngology*. If they are willing, at the same time, to submit their own abstract (in English, French, Italian, or German) it will be welcomed.

6. Editorial Communications may be addressed to THE EDITOR, *Journal of Laryngology*, c/o HEADLEY BROTHERS, 109 Kingsway, London, W.C.2.

7. The Annual Subscription commencing with the January issue is Two Pounds sterling, post free, and is payable in advance.

8. Single copies, both of the present and the previous series, are on sale at Four Shillings each.

9. All Subscriptions, advertising and business communications should be sent to the Publishers, HEADLEY BROTHERS, 109 Kingsway, London, W.C.2.

### *United States of America*

Orders for this Journal may be sent either through a local bookseller, or to Messrs. G. E. STECHERT & Co., 31-33 East 10th Street, New York, or may be sent direct to the Publishers, HEADLEY BROTHERS, 109 Kingsway, London, W.C.2, England.

Trade  
Mark **'Planacrine'** Brand  
EUFLAVINE LOZENGES

## *in Laryngology*

THE continuous application of an active bactericide to the mouth and throat is recognised as being of value in the prevention and treatment of infections of the oral and pharyngeal cavity. Unfortunately, gargles—the form in which these substances are more commonly prescribed—present difficulties to children and many adults, while they fail to reach the more deeply situated structures and their application under optimum conditions is intermittent. Again many disinfectants are rendered inactive by body fluids, giving rise to little more than a pleasant taste in the mouth and a false sense of security.

The active principle of 'PLANACRINE' Lozenges, however, remains effective in the

presence of saliva, possesses deep penetrating powers, and is harmless to the tissues. Its presentation in the form of pleasantly flavoured lozenges provides the practitioner with an antiseptic offering prolonged contact with the mucous surfaces in the treatment of follicular tonsillitis, pharyngitis, ulcerating and inflammatory infections of the mouth and throat, angina, etc. During epidemics of sore throat, influenza, etc., 'PLANACRINE' Lozenges are ideal for the prevention of all infections which find entry by way of the buccopharyngeal cavity.

The Lozenges should be allowed to dissolve slowly in the mouth at the rate of 1 or 2 per hour, the maximum being 20 in 24 hours.

### *Supplies*

'PLANACRINE' Lozenges are supplied in convenient pocket packs of 40.

## PRESCRIBE THE EASY EFFECTIVE METHOD

When spraying, the patient can hold his head in a natural position, yet the solution spreads throughout the nasal cavity, assuring thorough treatment. Effective dropper-application, on the other hand, requires a complicated posture technique which patients are apt to neglect in home treatment.

## DeVilbiss ATOMIZERS

These illustrations, which are based on X-ray research, clearly demonstrate the advantages of the atomizer as compared with the dropper
