

INFORMATION FOR AUTHORS

The Bulletin of the Australian Mathematical Society aims at quick publication of original research in all branches of mathematics. The Editors receive more than three times as much material as can be published in the BULLETIN; many meritorious papers can, therefore, not be accepted. Authors are asked to avoid, as far as possible the use of mathematical symbols in the title. Manuscripts are accepted for review with the understanding that the same work is not concurrently submitted elsewhere.

To ensure speedy publication, editorial decisions on acceptance or otherwise are taken quickly, normally within a month of receipt of the paper. Papers are accepted only after a careful evaluation by the Editor and an Associate Editor or other expert in the field. As even minor revisions are generally not permitted, authors should read carefully all the details listed below. For a paper to be acceptable for publication, not only should it contain new and interesting results but also

- (i) the exposition should be clear and attractive;
- (ii) the manuscript should be in publishable form, without revision.

Authors should submit **three** clean, high quality copies to

The Editorial Office, Bulletin of the Australian Mathematical Society,
Department of Mathematics, The University of Queensland,
Queensland 4072, Australia.

Unless requested at the time, material submitted to the BULLETIN will usually not be returned.

EDITORIAL POLICY

1. References. Arrange references alphabetically (by surname of the first author) and cite them numerically in the text. Ensure the accuracy of the references: authors' names should appear as in the work quoted. Include in the list of references only those works cited, and avoid citing works which are "in preparation" or "submitted". Where the work cited is not readily accessible (for example, a preprint) a photocopy of the title page and relevant sections of the copy that you have used should be included with your submission.

2. Abstracts.

1. Each paper must include an abstract of not more than 200 words, which should contain a brief but informative summary of the contents of the paper, but no inessential details.
2. The abstract should be self-contained, but may refer to the title.
3. Specific references (by number) to a section, proposition, equation or bibliographical item should be avoided.

3. Subject Classification. Authors should include in their papers one or more classification numbers, following the 2000 Mathematics Subject Classification. Details of this scheme can be found in each Annual Index of Mathematical Reviews or on the web at <http://www.ams.org/msc>.

4. Abstracts of Ph.D. Theses. The Bulletin endeavours to publish abstracts of all accepted Australasian Ph.D. theses in mathematics. One restriction, however, is that the abstract must be received by the Editor within 6 months of the degree being approved.

5. Electronic Manuscripts. The Bulletin is produced using AMS-TEX . Authors who are able to do so are invited to prepare their manuscripts using TEX . (We accept Plain TEX , AMS-TEX or LATEX .) Hard copy only should be submitted for assessment, but if the paper is accepted the author will be asked to send the text on an IBM PC compatible diskette or via e-mail to ams@maths.uq.edu.au. [Typed manuscripts are, of course, still acceptable.]

Bulletin of the Australian Mathematical Society

On the adjoint homology of 2-step nilpotent Lie algebras Leandro Cagliero and Paulo Tirao	177
On super efficiency in set-valued optimisation in locally convex spaces Yihong Xu and Chuanxi Zhu	183
Poincaré inequality for abstract spaces Alireza Ranjbar-Motlagh	193
Inverse semigroups generated by linear transformations Suzana Mendes-Gonçalves and R.P. Sullivan	205
Proximal proper efficiency for minimisation with respect to normal cones C.S. Lalitha and Ruchi Arora	215
Centralisers on rings and algebras Joso Vukman and Irena Kosi-Ujbl	225
Affine Baire-one functions on Choquet simplexes Jiří Spurný	235
Waring problem with factorials Moubariz Z. Garaev, Florian Luca and Igor E. Shparlinski	259
Uniformity for weak order convergence of Riesz space-valued measures Jun Kawabe	265
Carlson type inequalities for finite sums and integrals on bounded intervals Leo Larsson, Zsolt Páles and Lars-Erik Persson	275
Existence conditions in general quasimonotone variational inequalities D. Aussel and D.T. Luc	285
An Alexandrov type theorem for k convex functions Nirmalendu Chaudhuri and Neil Trudinger	305
Shilnikov type solutions under strong non-autonomous perturbation Elías Tuma	315
Generic Lie colour algebras Kenneth L. Price	327
Lower and upper bounds for Cohen-Macaulay dimension J. Asadollahi and Sh. Salarian	337

ABSTRACTS OF AUSTRALASIAN Ph.D. THESES

Fixed point index calculations on cones Ruxue Yu	347
Bandwidth selectors for multivariate kernel density estimation Tarn Thanh Duong	351
