

Notes for contributors

A submission to Applied Probability is considered as a submission to either *Journal of Applied Probability* (JAP) or *Advances in Applied Probability* (AAP). Longer papers are typically published in AAP, but the assignment of papers between the two journals is made by the Executive Editor on an issue-by-issue basis. Short communications and letters specifically relating to papers appearing in either JAP or AAP are published in JAP.

Papers submitted to the Applied Probability journals are considered on the understanding that they have not been published previously and are not under consideration by another publication. Accepted papers will not be published elsewhere without the written permission of the Trust. Submitted papers should be in English. It is the author's responsibility to ensure an acceptable standard of language, and a paper failing to meet this requirement may go back to the author for rewriting before being sent out for review.

Papers should include: (i) a **short abstract** of 4–10 lines giving a non-mathematical description of the subject matter and results; (ii) a list of **keywords** detailing the contents; and (iii) a list of **classifications**, using the 2010 Mathematics Subject Classification scheme (<http://www.ams.org/msc/>). Letters to the Editor need not include these. To assist authors in writing papers in the Applied Probability style, they may use the L^AT_EX class file aptpub.cls, available from <http://www.appliedprobability.org/>. Use of this class file is not a condition of submission, but will considerably increase the speed at which papers are processed.

Papers should be submitted electronically through ScholarOne at <https://mc.manuscriptcentral.com/apjournals>. All submissions will be acknowledged on receipt.

Copyright

The copyright of all published papers is vested in the Applied Probability Trust. When a paper is accepted for publication, the Trust asks the authors to assign copyright by signing a form in which the terms of copyright are listed. Failure to do this promptly may delay or prevent publication.

Authorisation to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by the Applied Probability Trust for libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the corresponding processing and royalty fees (see <http://www.copyright.com>) are paid directly to CCC, 222 Rosewood Drive, Danvers, MA 01923, USA. 0021–9002/19

Research Papers

- 1 ERIK EKSTRÖM, MARCUS OLOFSSON AND MARTIN VANNESTÅL. A renewal theory approach to two-state switching problems with infinite values
- 19 ANTOINE JACQUIER AND FANGWEI SHI. Small-time moderate deviations for the randomised heston model
- 29 S. GRUSEA AND S. MERCIER. Improvements on the distribution of maximal segmental scores in a markovian sequence
- 53 MICHAEL GRABCHAK, MARK KELBERT AND QUENTIN PARIS. On the occupancy problem for a regime-switching model
- 78 MICHAEL FALK, AMIR KHORRAMI CHOKAMI AND SIMONE A. PADOAN. Records for time-dependent stationary gaussian sequences
- 97 ERIC FOXALL AND NICOLAS LANCHIER. Generalized stacked contact process with variable host fitness
- 122 TOM BRITTON. Directed preferential attachment models: Limiting degree distributions and their tails
- 137 MACIEJ WIŚNIEWOLSKI. Integral functionals under the excursion measure
- 156 EBRAHIM AMINI-SERESHT, BAHA-ELDIN KHALEDI AND SUBHASH KOCHAR. Some new results on stochastic comparisons of coherent systems using signatures
- 174 RIMAS NORVAIŠA AND ALFREDAS RAČKAUSKAS. Uniform asymptotic normality of weighted sums of short-memory linear processes
- 196 GÖTZ KERSTING. A unifying approach to branching processes in a varying environment
- 221 SHIYU SONG AND YONGJIN WANG. On first passage times of sticky reflecting diffusion processes with double exponential jumps
- 237 ELENA DYAKONOVA, DOUDOU LI, VLADIMIR VATUTIN AND MEI ZHANG. Branching processes in a random environment with immigration stopped at zero
- 250 CONGZAO DONG AND ALEXANDER IKSANOV. Weak convergence of random processes with immigration at random times
- 266 ZHONGWEI LIAO AND JINGHAI SHAO. Long-time behavior of lévy-driven ornstein–uhlenbeck processes with regime switching
- 280 ALEXANDER IKSANOV AND BOHDAN RASHYTOV. A functional limit theorem for general shot noise processes
- 295 YUELIN LIU, VLADAS SIDORAVICIUS, LONGMIN WANG AND KAINAN XIANG. An invariance principle and a large deviation principle for the biased random walk on \mathbb{Z}^d
- 314 MICHAEL FALK, SIMONE A. PADOAN AND STEFANO RIZZELLI. Strong convergence of multivariate maxima
- 332 HOSAM MAHMOUD. A model for the spreading of fake news
- 343 G. REINERT AND C. YANG. A bound on the rate of convergence in the central limit theorem for renewal processes under second moment conditions
- 361 TIZIANO DE ANGELIS AND ALESSANDRO MILAZZO. Optimal stopping for the exponential of a brownian bridge
