The Journal of Laryngology and Otology

(Founded in 1887 by MORELL MACKENZIE and NORRIS WOLFENDEN)

EDITED BY

WALTER HOWARTH

ASSISTANT EDITOR

R. SCOTT STEVENSON

WITH THE COLLABORATION OF

G. H. BATEMAN V. E. NEGUS R. G. MACBETH

1. Original Articles are accepted on the condition that they have not been published elsewhere.

2. Manuscripts should be typewritten, on one side only of the paper, and well spaced.

The Harvard system of recording references should be used, e.g. GREEN, C., and BROWN, D. (1951) *J. Laryng.*, 65, 33.

It is most important that authors should verify personally the accuracy of every reference before submitting a paper for publication.

3. Galley proofs and engraver's proofs of illustrations are sent to the author. Corrections, which should be kept to a minimum, must be clearly marked, and no extra matter added.

4. Authors will be expected to pay for the cost of illustration blocks. An estimate of the cost will be provided.

5. Orders for reprints should be sent when returning galley proofs, and for this purpose special forms are supplied.

6. Authors of original communications on Oto-Laryngology in other journals are invited to send a copy, or two reprints, to the *Journal of Laryngology*. If they are willing, at the same time, to submit their own abstract (in English, French, Italian, or German) it will be welcomed.

7. Editorial communications may be addressed to THE EDITOR, *Journal of Laryngology*, c/o HEADLEY BROTHERS LTD, 109 Kingsway London WC 2.

8. The annual subscription is three guineas sterling (U.S.A. \$10.) post free, and is payable in advance.

9. Single copies will be on sale at 7s. 6d. each; copies of parts up to Vol. LXIII may be purchased at 4s. each.

10. All subscriptions, advertising and business communications should be sent to the publishers, HEADLEY BROTHERS LTD, 109 Kingsway London WC 2.

United States of America

Orders for this *Journal* may be sent either through a local bookseller, or to Messrs. G. E. STECHERT & Co., 31-33 East 10th Street, New York, or they may be sent direct to the publishers, HEADLEY BROTHERS LTD, 109 Kingsway London WC2, England.

Effective local treatment of sinusitis . . .

Sinusitis is now regarded as a medical rather than a surgical problem and many authorities recommend its conservative treatment.

'Pendex' can be used for sinus irrigation, but when resolution is delayed the Proetz* displacement technique is often of great assistance. This method is effective for cleansing the mucosa of the nasal sinuses, loosening inspissated secretions, and bringing about drainage of infected sinuses provided the natural ostia are patent and the mucosa is not polypoid.

'PENDEX' the penicillin-vasoconstrictor

aids drainage from the sinuses without impairing ciliary activity, and ensures an adequate concentration of penicillin at the site of infection.

'PENDEX'

is available—on prescription only—in 1.5 ml. (½-oz.) bottles.

Detailed information on 'Pendex' is available on request.

AMPLIVOX MODEL 61 THE CLINICAL AUDIOMETER OF INTERNATIONAL REPUTE

"Messrs. Amplivox were among the first firms to produce an audiometer in this country, and their larger model is one of the best instruments of the kind now made in the world at a competitive price."—The LANCET, 23-12-50.

- Eleven exact test frequencies 125-12,000 c.p.s.
- Simplified hearing loss dial. The same set of figures is read for both bone and air conduction at all frequencies, and for speech.
- Bone conduction tests can be made from 125-4,000 c.p.s.
- Masking Tone calibrated in decibels, permitting accurate control of masking.
- Double Air receivers enable test tones to be switched instantly from ear to ear.
- Speech test circuit monitors speech level, permitting accurate measurement of hearing loss for speech.
- Loudness Balance Control establishes presence of recruitment in monaural deafness.
- Automatic voltage compensator.

Recruitment Test Set accessory establishes presence of recruitment by amplitude modulation, enabling each ear to be tested independently.

Speech Turntable and English-made Harvard Spondee records also available.

Full details are available from the manufacturers who will gladly arrange demonstrations if required.

Introducing to Otologists...

THE FIRST

Silent

AURAL AID

into the perfecting of which has gone
£30,000 in Ardenite Research

From the Ardenite Research Unit, working under the scientific direction of Dr. S. C. Ghose, now comes the very first completely 'silent' Aural Aid. Embodying an entirely new approach to the problem of 'noise' elimination, the Ardenite 'Phoenix' represents a major advance in aural aid technique and makes a valuable contribution to the rehabilitation of the hard-of-hearing.

The Ardenite 'Phoenix' offers these advantages:

- ★ **EXCEPTIONAL SUPPRESSION OF 'CLOTHES-RUBBING' and all unwanted background sounds.**
- ★ **VARIATION OF FREQUENCY CHARACTERISTICS in accordance with the Medical Research Council's recommendations.**
- ★ **AUTOMATIC VOLUME LIMITATION (A.V.C.) for protection against sudden loud sounds.**
- ★ **Unique PRINTED WIRING for stable characteristics over long periods of use.**
- ★ **IMMEDIATE SERVICING by the simple interchange of plugged-in parts.**

— THE MICROPHONE IS ON TOP—CLEAR OF ALL CONTACT WITH CLOTHING

— 'FLOATING' CHASSIS IS FREE OF ALL METAL-TO-METAL CONTACT

The **ARDENTE**
SILENT PHOENIX

For further particulars of the Ardenite 'Phoenix' and of our well-known "7-Days Home Trial" scheme, please apply to:

**THE SECRETARY, THE ARDENITE HEARING REHABILITATION UNIT,
ARDENTE HOUSE, 309 OXFORD STREET, LONDON, W.1. MAYfair 7917**

NEW

Antibiotic Lozenge

Bacteriostatic

Bactericidal

Analgesic

Tyrosolven lozenges are a most effective treatment for infections of the mouth and throat. The antibiotic tyrothricin has bactericidal and powerfully bacteriostatic actions; its spectrum includes haemolytic streptococci, enterococci, vibrioform and fusiform bacteria, and spirochaetes. Benzocaine, as a mild local anaesthetic, gives prompt relief from irritation and pain. The economy of treatment with Tyrosolven lozenges is noteworthy, and they may be prescribed with confidence.

Tyrosolven lozenges are supplied to chemists in a dispensing pack of 250 lozenges at 16/8d.

Formula: Tyrothricin 1 mg., Benzocaine 5 mg.

BINDING

Journal of Laryngology & Otology

Subscribers wishing to have their Journals bound
can do so by sending them to the Publishers.

Volumes are strongly bound in whole dark blue buckram cases,
with gold lettering on spine. The cost of binding is 25s. per
volume, including postage.

Some missing parts can be supplied at 7s. 6d. each, or the whole
volume, complete in the above binding, for 88s.

Publishers' cases can be supplied for 10s., including postage.
