The Journal of Agricultural Science publishes papers from all over the world based on original data and on reassessments of past data covering the whole range of agricultural science. Each issue contains about 25 full length papers plus some short communications.

The Journal was launched in 1905 by the Cambridge Professors of Agriculture and the Director of the Rothamsted Experimental Station and their policy of making it a major source for agricultural education has been followed throughout. Thus all papers submitted are very carefully refereed for their scientific content and those published equally carefully edited to ensure that the English (the only language used) is unambiguous and easily translated into other languages.
