The Journal of Laryngology and Otology

(Founded in 1887 by MORELL MACKENZIE and NORRIS WOLFENDEN)

EDITED BY
WALTER HOWARTH

ASSISTANT EDITOR
R. SCOTT STEVENSON

WITH THE COLLABORATION OF
G. H. BATEMAN V. E. NEGUS R. G. MACBETH

1. Original Articles are accepted on the condition that they have not been published elsewhere.

2. Manuscripts should be typewritten, on one side only of the paper, and well spaced.

The Harvard system of recording references should be used, e.g. GREEN, C., and BROWN, D. (1951) *J. Laryng.*, 65, 33.

It is most important that authors should verify *personally* the accuracy of every reference before submitting a paper for publication.

3. Galley proofs and engraver's proofs of illustrations are sent to the author. Corrections, which should be kept to a minimum, must be clearly marked, and no extra matter added.

4. Authors will be expected to pay for the cost of illustration blocks. An estimate of the cost will be provided.

5. Orders for reprints should be sent when returning galley proofs, and for this purpose special forms are supplied.

6. Authors of original communications on Oto-Laryngology in other journals are invited to send a copy, or two reprints, to the *Journal of Laryngology*. If they are willing, at the same time, to submit their own abstract (in English, French, Italian, or German) it will be welcomed.

7. Editorial communications may be addressed to THE EDITOR *Journal of Laryngology*, c/o HEADLEY BROTHERS LTD, 109 Kingsway London WC 2.

8. The annual subscription is three guineas sterling (U.S.A. \$10.) post free, and is payable in advance.

9. Single copies will be on sale at 7s. 6d. each; copies of parts up to Vol. LXIII may be purchased at 4s. each.

10. All subscriptions, advertising and business communications should be sent to the publishers, HEADLEY BROTHERS LTD, 109 Kingsway London WC 2.

United States of America

Orders for this *Journal* may be sent either through a local bookseller, or to Messrs G. E. STECHERT & Co., 31-33 East 10th Street, New York, or they may be sent direct to the publishers, HEADLEY BROTHERS LTD, 109 Kingsway London WC 2, England.

AMPLIVOX MODEL 61 THE CLINICAL AUDIOMETER OF INTERNATIONAL REPUTE

"Messrs. Amplivox were among the first firms to produce an audiometer in this country, and their larger model is one of the best instruments of the kind now made in the world at a competitive price."—The LANCET, 23-12-50.

- Eleven exact test frequencies 125-12,000 c.p.s.
- Simplified hearing loss dial. The same set of figures is read for both bone and air conduction at all frequencies, and for speech.
- Bone conduction tests can be made from 125-4,000 c.p.s.
- Masking Tone calibrated in decibels, permitting accurate control of masking.
- Double Air receivers enable test tones to be switched instantly from ear to ear.
- Speech test circuit monitors speech level, permitting accurate measurement of hearing loss for speech.
- Loudness Balance Control establishes presence of recruitment in monaural deafness.
- Automatic voltage compensator.

Recruitment Test Set accessory establishes presence of recruitment by amplitude modulation, enabling each ear to be tested independently.

Speech Turntable and English-made Harvard Spondee records also available.

Full details are available from the manufacturers who will gladly arrange demonstrations if required.

NEW
Antibiotic Lozenge

Bacteriostatic

Bactericidal

Analgesic

Tyrosolven lozenges are a most effective treatment for infections of the mouth and throat. The antibiotic tyrothricin has bactericidal and powerfully bacteriostatic actions; its spectrum includes haemolytic streptococci, enterococci, vibrioform and fusiform bacteria, and spirochaetes. Benzocaine, as a mild local anaesthetic, gives prompt relief from irritation and pain. The economy of treatment with Tyrosolven lozenges is noteworthy, and they may be prescribed with confidence.

Tyrosolven lozenges are supplied to chemists in a dispensing pack of 250 lozenges at 16/8d.

Formula: Tyrothricin 1 mg., Benzocaine 5 mg.

Introducing to Otologists...

THE FIRST

Silent

AURAL AID

into the perfecting of which has gone
£30,000 in Ardenite Research

From the Ardenite Research Unit, working under the scientific direction of Dr. S. C. Ghose, now comes the very first completely 'silent' Aural Aid. Embodying an entirely new approach to the problem of 'noise' elimination, the Ardenite 'Phoenix' represents a major advance in aural aid technique and makes a valuable contribution to the rehabilitation of the hard-of-hearing.

The Ardenite 'Phoenix' offers these advantages:

- ★ **EXCEPTIONAL SUPPRESSION OF 'CLOTHES-RUBBING' and all unwanted background sounds.**
- ★ **VARIATION OF FREQUENCY CHARACTERISTICS in accordance with the Medical Research Council's recommendations.**
- ★ **AUTOMATIC VOLUME LIMITATION (A.V.C.) for protection against sudden loud sounds.**
- ★ **Unique PRINTED WIRING for stable characteristics over long periods of use.**
- ★ **IMMEDIATE SERVICING by the simple interchange of plugged-in parts.**

—THE MICROPHONE IS ON TOP—CLEAR OF ALL CONTACT WITH CLOTHING

—'FLOATING' CHASSIS IS FREE OF ALL METAL-TO-METAL CONTACT

The ARDENITE
SILENT PHOENIX

For further particulars of the Ardenite 'Phoenix' and of our well-known "7-Days Home Trial" scheme, please apply to:

AN INTENSIVE COURSE IN ENDOSCOPY
 for senior students and practising members of the
 Speciality will be given from 13th to 18th April,
 1953.

The course will be a whole-time one and will
 include practical work.

Fee £10 10s. 0d.

Detailed syllabus obtainable from the Dean.

ŒSOPHAGUS

by Eddy D. Palmer, M.D. and its DISEASES

Head of the Gastrointestinal Section, Walter Reed Hospital, Washington

THE technical advances of œsophageal surgery are fast
 out-stripping clinical understanding of the organ and its
 diseases. Modern treatment creates a demand for more
 accurate diagnosis, for better knowledge of the pathological
 characteristics of observed lesions, and for better clinical
 judgement in the application of surgical techniques.

**In this book will be found the latest clinical practice relating to
 œsophageal disorders.**

562 pages 125 *Illus.* 24 *colour plates* 93s. 0d.

BINDING

Journal of Laryngology & Otology

Subscribers wishing to have their Journals bound
can do so by sending them to the Publishers.

Volumes are strongly bound in whole dark blue buckram cases,
with gold lettering on spine. The cost of binding is 25s. per
volume, including postage.

Some missing parts can be supplied at 7s. 6d. each, or the whole
volume, complete in the above binding, for 88s.

Publishers' cases can be supplied for 10s., including postage.
