# Mathematika

Produced, marketed and distributed for  
The London Mathematical Society

## Managing Editor

Alex Sobolev, *University College London, United Kingdom*

*Mathematika* publishes both pure and applied mathematical articles and has done so continuously since its founding by Harold Davenport in the 1950s. The traditional emphasis has been towards the purer side of mathematics but applied mathematics and articles addressing both aspects are equally welcome. The journal, which is owned by University College London and published by the London Mathematical Society, will continue to publish research papers of the very highest mathematical quality. All articles, including the full archive dating back to 1954, are available electronically via Cambridge Journals Online.

# Journal of Fluid Mechanics

## Editor

M. G. Worster, University of Cambridge, UK

*Journal of Fluid Mechanics* is the leading international journal in the field and is essential reading for all those concerned with developments in fluid mechanics. It publishes authoritative articles covering theoretical, computational and experimental investigations of all aspects of the mechanics of fluids. Each issue contains papers on both the fundamental aspects of fluid mechanics, and their applications to other fields such as aeronautics, astrophysics, physiology, chemical and mechanical engineering, hydraulics, meteorology, oceanography, geology, acoustics and combustion.

# Mathematical Structures in Computer Science

**Editor-in-Chief**

G. Longo, *CNRS and Ecole Normale Supérieure, Paris, France*

*Mathematical Structures in Computer Science* is a journal of theoretical computer science which focuses on the application of ideas from the structural side of mathematics and mathematical logic to computer science. The journal aims to bridge the gap between theoretical contributions and software design, publishing original papers of a high standard and broad surveys with original perspectives in all areas of computing, provided that ideas or results from logic, algebra, geometry, category theory or other areas of logic and mathematics form a basis for the work.

# Probability in the Engineering and Informational Sciences

**Editor**

Sheldon M. Ross, *University of Southern California, USA*

The primary focus of the journal is on stochastic modelling in the physical and engineering sciences, with particular emphasis on queueing theory, reliability theory, inventory theory, simulation, mathematical finance and probabilistic networks and graphs. Papers on analytic properties and related disciplines are also considered, as well as more general papers on applied and computational probability, if appropriate. Readers include academics working in statistics, operations research, computer science, engineering, management science and physical sciences as well as industrial practitioners engaged in telecommunications, computer science, financial engineering, operations research and management science.

# Proceedings of the Edinburgh Mathematical Society

Published for The Edinburgh Mathematical Society

## Editorial Management

The Secretary, ICMS, Edinburgh, UK

The Edinburgh Mathematical Society was founded in 1883 and over the years, has evolved into the principal society for the promotion of mathematics research in Scotland. The Society has published its Proceedings since 1884. This journal contains research papers on topics in a broad range of pure and applied mathematics, together with a number of topical book reviews.

# Combinatorics, Probability & Computing

## Editor-in-Chief

Béla Bollobás, *DPMMS, Cambridge, UK; University of Memphis, USA*

Published bimonthly, *Combinatorics, Probability & Computing* is devoted to the three areas of combinatorics, probability theory and theoretical computer science. Topics covered include classical and algebraic graph theory, extremal set theory, matroid theory, probabilistic methods and random combinatorial structures; combinatorial probability and limit theorems for random combinatorial structures; the theory of algorithms (including complexity theory), randomised algorithms, probabilistic analysis of algorithms, computational learning theory and optimisation.

## INSTRUCTIONS FOR CONTRIBUTORS

*Editorial policy* The journal publishes *research papers* and *survey papers*.

**Research papers** may be in any area of applied mathematics, with especial emphasis on *new mathematical ideas relevant to modelling and analysis in modern science and technology and the development of interesting mathematical methods of wide applicability*. There is no restriction in the scope or style of mathematics as long as the content is presented to be as accessible as possible to the entire community of mathematicians and mathematical scientists. This applies in particular to the Introduction and conclusion. Standard mathematical techniques will only be published if they are associated with novel applications or lead to substantial advances in established problem areas.

**Survey papers** aim to bridge the gap between academia and industry by presenting mathematical methods relevant to industry in its broadest sense, ranging from manufacturing to finance, telecommunications to biotechnology, and describing industrial problems of interest to mathematicians. Coverage includes reviews of techniques in relation to industrial application, new problem areas for which mathematical models and techniques are not yet available, comparison of solution methods, and descriptions of modelling approaches.

*Submission of manuscripts* Submission of a paper is taken to imply that it has not been previously published and that it is not being considered for publication elsewhere. Authors of articles published in the journal assign copyright to Cambridge University Press (with certain rights reserved) and you will receive a copyright assignment form for signature on acceptance of your paper.

Manuscripts for consideration for the European Journal of Applied Mathematics should be submitted electronically as a pdf file, using the [Editorial Manager](#) system. The system will allow authors to benefit from faster review and earlier online publication. When and if the paper has been accepted for publication, we will require a pdf file of the accepted version, along with the source files that created it: these should be submitted to the publisher via the Editorial Manager system. Authors who are unable to do so should contact the [editorial office](#).

*Details of Style files* The LaTeX 2e file `ejm.cls` and the guide `ejm2egui.tex` are available via anonymous ftp from the Cambridge University Press site at <ftp://ftp.cambridge.org/pub/texarchive/journals/latex/ejm-cls>. In case of difficulties obtaining these files, there is a help-line available via e-mail: please contact [texline@cup.cam.ac.uk](mailto:texline@cup.cam.ac.uk). The file `readme.txt` contains instructions.

*Layout of manuscripts* Papers must begin with an abstract of not more than 300 words; at the end of abstract authors must also include up to five 'key subject categories', listed in order of importance, taken from the Mathematics Subject Classification (see <http://www.ams.org/mathscinet/msc/pdfs/classification2010.pdf>). The paper should end with a brief concluding section. The SI system of units must be used throughout. There is no formal restriction on length.

*Figures* Figures should be produced and incorporated into the text using a standard LaTeX compatible package; they will be reproduced with the author's lettering: the preferred typeface is Times. They should be supplied at approximately the size of reproduction (maximum 134 mm × 180 mm). All figures must be cited in the text; they must include a legend, using the `\caption` command, which will in turn generate automatically a number that will be used for the citation.

Colour figures may be published at no charge in the online edition; a charge of £500 for each full page in colour will be levied for authors requesting colour reproduction in the printed version of the journal. All figures and reference to the figures must be equally comprehensible in both colour and greyscale.

Acceptable file types for figures are, EPS, TIFF or high resolution JPEG. In more detail:

*Line artwork (graphs)*

Format: `tif` or `eps`

Colour mode: black and white (also known as 1-bit)

Resolution: 1200 dpi

*Combination artwork (line/tone)*

Format: `tif` or `eps`

Colour mode: grayscale (also known as 8-bit)

Resolution: 800 dpi

*Black and white halftone (photographs)*

Format: `tif`

Colour mode: grayscale (also known as 8-bit)

Resolution: 300 dpi

*Colour halftone artwork (photographs)*

Format: `tif`

Colour mode: CMYK colour

Resolution: 300 dpi

*References and Citations in the text* The `ejm.cls` file supports various citation styles; more details are in the guide. The default is that references are numbered in square brackets. References should be listed in alphabetical order at the end of the main text, within the bibliography environment. Please label each reference and use that label when citing. In this way, citation style will be taken care of automatically. Each reference should include, in the following order: author family name, initials; year in parentheses; article title; journal name (in italic), abbreviated in accordance with the *World List of Scientific Periodicals* (4th Edn); volume number (in bold); inclusive page numbers. If a book is being cited, then include author family name, initials, year in parentheses, title (in italic), publisher.

*Proof Reading* Typographical or factual errors only may be changed at proof stage. The publisher reserves the right to charge authors for correction of non-typographical errors. No page charge is made.

*Incremental Publishing and DOIs*

The European Journal of Applied Mathematics now publishes articles incrementally online (at Cambridge Journals Online: [journals.cambridge.org](http://journals.cambridge.org)) as soon as author corrections have been completed and before they join a printed issue. A new reference has now been added to the first page of the article in the journal catchline. This is the DOI—The Digital Object Identifier. This is a global publishing standard. A unique DOI number is created for each published item. It can be used for citation purposes instead of volume, issue and page numbers. It therefore suits the early citation of articles which are published on the web before they have appeared in a printed issue. <http://www.journals.cambridge.org/EJM>

*Offprints* No paper offprints will be supplied. Each author will have access to electronic offprints in pdf form.

## COPYING

This journal is registered with the Copyright Clearance Center, 222 Rosewood Drive, Danvers, MA 01923, USA ([www.copyright.com](http://www.copyright.com)). Organisations in the USA who are also registered with the CCC may therefore copy material (beyond the limits permitted by sections 107 and 108 of US copyright law) subject to payment to CCC. This consent does not extend to multiple copying for promotional or commercial purposes.

Organisations authorised by the Copyright Licensing Agency may also copy material subject to the usual conditions.

*ISI Tear Sheet Service*, 3501 Market Street, Philadelphia, Pennsylvania 19104, USA, is authorised to supply single copies of separate articles for private use only.

*For all other use, permission should be sought from the Cambridge or the American Branch of Cambridge University Press.*
