

## INFORMATION FOR AUTHORS

The Bulletin of the Australian Mathematical Society aims at quick publication of original research in all branches of mathematics. The Editors receive more than three times as much material as can be published in the BULLETIN; many meritorious papers can, therefore, not be accepted. Authors are asked to avoid, as far as possible the use of mathematical symbols in the title. Manuscripts are accepted for review with the understanding that the same work is not concurrently submitted elsewhere.

To ensure speedy publication, editorial decisions on acceptance or otherwise are taken quickly, normally within a month of receipt of the paper. Papers are accepted only after a careful evaluation by the Editor and an Associate Editor or other expert in the field. As even minor revisions are generally not permitted, authors should read carefully all the details listed below. For a paper to be acceptable for publication, not only should it contain new and interesting results but also

- (i) the exposition should be clear and attractive;
- (ii) the manuscript should be in publishable form, without revision.

Authors should submit three clean, high quality copies to

The Editorial Office, Bulletin of the Australian Mathematical Society,  
Department of Mathematics, The University of Queensland,  
Queensland 4072, Australia.

Unless requested at the time, material submitted to the BULLETIN will usually not be returned.

### EDITORIAL POLICY

**1. References.** Arrange references alphabetically (by surname of the first author) and cite them numerically in the text. Ensure the accuracy of the references: authors' names should appear as in the work quoted. Include in the list of references only those works cited, and avoid citing works which are "in preparation" or "submitted". Where the work cited is not readily accessible (for example, a preprint) a photocopy of the title page and relevant sections of the copy that you have used should be included with your submission.

### 2. Abstracts.

1. Each paper must include an abstract of not more than 200 words, which should contain a brief but informative summary of the contents of the paper, but no inessential details.
2. The abstract should be self-contained, but may refer to the title.
3. Specific references (by number) to a section, proposition, equation or bibliographical item should be avoided.

**3. Subject Classification.** Authors should include in their papers one or more classification numbers, following the 2000 Mathematics Subject Classification. Details of this scheme can be found in each Annual Index of Mathematical Reviews or on the web at <http://www.ams.org/msc>.

**4. Abstracts of Ph.D. Theses.** The Bulletin endeavours to publish abstracts of all accepted Australasian Ph.D. theses in mathematics. One restriction, however, is that the abstract must be received by the Editor within 6 months of the degree being approved.

**5. Electronic Manuscripts.** The Bulletin is produced using  $\text{\LaTeX}$ . Authors who are able to do so are invited to prepare their manuscripts using  $\text{\TeX}$ . (We accept Plain  $\text{\TeX}$ ,  $\text{\LaTeX}$  or  $\text{\LaTeX}$ .) Hard copy only should be submitted for assessment, but if the paper is accepted the author will be asked to send the text on an IBM PC compatible diskette or via e-mail to [ams@maths.uq.edu.au](mailto:ams@maths.uq.edu.au). [Typed manuscripts are, of course, still acceptable.]

<b>Some properties of Fatou and Julia sets of transcendental meromorphic functions</b>	
Jian-Hua Zheng, Sheng Wang and Zhi-Gang Huang	1
<b>Construction of sunny nonexpansive retractions in Banach spaces</b>	
Tomas Dominguez Benavides, Genaro López Acedo and Hong-Kun Xu	9
<b>Two hyperbolic Schwarz lemmas</b>	
L. Bernal-González and M.C. Calderón-Moreno	17
<b>A note on tensor products of reflexive algebras</b>	
Zhe Dong	25
<b>A remark on Littlewood–Paley <math>g</math>-function</b>	
Lixin Yan	33
<b>A new minimax theorem and a perturbed James’s theorem</b>	
M. Ruiz Galán and S. Simons	43
<b>Applications of the Gauge-invariant uniqueness theorem for graph algebras</b>	
Teresa Bates	57
<b>Order structure on certain classes of ideals in group algebras and amenability</b>	
Yuji Takahashi	69
<b>Weighted estimates for fractional maximal functions related to spherical means</b>	
Michael Cowling, José García-Cuerva and Hendra Gunawan	75
<b>A Beurling algebra is semisimple: an elementary proof</b>	
S.J. Bhatt and H.V. Dedania	91
<b>Positive solutions of fourth-order superlinear singular boundary value problems</b>	
Guoliang Shi and Shaozhu Chen	95
<b><math>H</math>-joint numerical ranges</b>	
Chi-Kwong Li and Leiba Rodman	105
<b>Descent on Picard groups using functions on curves</b>	
Samir Siksek	119
<b>Maximum average distance in complex finite dimensional normed spaces</b>	
Juan C. García-Vázquez and Rafael Villa	125
<b>On Fréchet algebras of power series</b>	
S.J. Bhatt and S.R. Patel	135
<b><math>k</math>-gon partitions</b>	
Michael D. Hirschhorn	149
<b>The Lebesgue function for Hermite-Fejér interpolation on the extended Chebyshev nodes</b>	
Simon J. Smith	151
<b>Hardy’s uncertainty principle on hyperbolic spaces</b>	
Nils Byrial Andersen	163

## ABSTRACTS OF AUSTRALASIAN Ph.D. THESES

<b>Subnormal structure of finite soluble groups</b>	
C.J.T. Wetherell	171
<b>On the existence of solutions to discrete and continuous boundary value problems</b>	
Christopher C. Tisdell	173
<b>Critical sets in latin squares and associated structures</b>	
Richard Winston Bean	175
