Table 1 of Eniang et al. (2017) states incorrectly that the data presented are the numbers of buffalo per km of transect recorded during each study period at each of the study sites.

The numbers presented are the total numbers of buffalo recorded per study period at each of the study sites, and the corrected table is provided here.

TABLE 1 Numbers of forest buffalo *Syncerus caffer nanus* sighted in four areas of the Cross River National Park in Nigeria (Fig. 1) during both recce and line transect surveys, by study site, study period and habitat type.

Study site	Total no. of buffalo per period			
	Nov.–Dec. 2001	June–Aug. 2005	Sep.–Oct. 2009	June–July 2013
Oyi-Mache	19 (12 in mature forest, 7 in secondary forest)	15 (9 in mature forest, 6 in secondary forest)	8 (mature forest)	11 (mature forest)
Mbe Mountains	9 (6 in mature forest, 3 in secondary forest)	13 (3 in mature forest, 10 in secondary forest)	6 (mature forest)	8 (mature forest)
Boshi-Okwangwo	8 (5 in mature forest, 3 in secondary forest)	6 (mature forest)	7 (5 in mature forest, 2 in secondary forest)	13 (7 in mature forest, 3 in secondary forest, 3 in agricultural land)
Obudu cattle ranch	3 (savannah)	4 (savannah)	1 (savannah)	0
