

# New from Scott, Foresman and Company

---

## **Investment Concepts, Analysis, and Strategy**

Robert C. Radcliffe, University of Florida

Available March 1982

©1982, hardbound, 740 pages

**Investment** is a highly readable, analytical text that emphasizes modern portfolio theory and the CAPM while covering the traditional institutional topics. It includes a superior treatment of bond immunization procedures, financial futures, fixed income securities, tax strategies, and securities as an inflation hedge, and the first accessible discussion of Ross and Roll. Featured in the text are realistic, end-of-chapter problems, many of which were taken from C.F.A. exams. Answers are provided in the text and in the *Instructor's Manual*.

## **An Introduction to Financial Management Second Edition**

Ezra Solomon, Stanford University  
John J. Pringle, University of North Carolina

©1980, 700 pages, hardbound

This substantial revision continues the well-organized and conceptually clear treatment of corporate finance presented in the First Edition. Modern finance is integrated into the traditional topics needed by managers, and a new emphasis is placed on problem-solving and real-world examples. The Second Edition includes new chapters on valuation and the CAPM, international finance, and mergers and acquisitions. The new teaching package consists of a superb *Study Guide* by Howard Lanser and John Halloran, University of Notre Dame; an *Instructor's Manual* with 600 class-tested problems; *Cases* by Michael Rice and John J. Pringle, University of North Carolina, Chapel Hill; and *Transparency Masters*.
