

# Light and Life in the Sea

Edited by

**P. J. HERRING, A. K. CAMPBELL, M. WHITFIELD and L. MADDOCK**

Covering every aspect of this important and active field the authors discuss the significance of light in a marine environment for both animal and plant life. It contains contributions on the physics of light, the harvesting and utilisation of light by photosynthetic marine organisms, biological, chemical and applied aspects of bioluminescence, and the reception of light by marine animals and their responses. The broad selection of multidisciplinary reviews by leading experts in topics as diverse as satellite imagery and molecular biology provide a thorough and coherent overview of this fascinating subject.

## **Polar and Glaciological Abstracts**

**Polar and Glaciological Abstracts** is the first specialist abstracting publication to offer comprehensive coverage of the world's polar regions. Produced by the library of the Scott Polar Research Institute, it scans over 900 series, plus relevant books, reports and theses. Each issue contains author, subject and geographic indexes. The indexes are cumulated annually.

### **Journals of related interest**

**Oceanus** – explores a wide range of issues related to the world's oceans. It contains original research reports by the world's leading marine scientist, all edited for the educated lay reader.

**Polar Record** – a cross-disciplinary journal, published quarterly, covering both polar regions and catering for a wide range of interests from anthropology to zoology.

## The Journals of the British Ecological Society

### JOURNAL OF ECOLOGY

Edited by J.A. Lee, J. White and  
J. Etherington

*The Journal of Ecology* is one of the world's oldest and most respected publications in the science. The objects of the journal are: (1) to foster and promote the study of vegetation and ecology, especially in the British Isles; (2) to afford an outlet for original work on these subjects; (3) as far as possible to present a record of the commentary on the progress of these studies throughout the world. The journal includes the series Biological Flora of the British Isles, which appear in most issues of the journal but are also available as separate offprints on standing orders.

### JOURNAL OF ANIMAL ECOLOGY

Edited by L.R. Taylor and J.M. Elliott

This leading international journal publishes papers on original research in all branches of animal ecology. A balance is sought between aquatic and terrestrial environments, between invertebrates and vertebrates, and between theoretical, experimental and analytical approaches to soundly-based field data. Occasional purely descriptive, theoretical or review papers may be published at the discretion of the editors on animals or concepts of special interest or as part of an extensive development of a subject or as an adjunct to a long-term project.

#### Subscription Information

The *Journal of Ecology* is published quarterly, the *Journal of Animal Ecology* and *Journal of Applied Ecology* are published three times a year and *Functional Ecology* is published bi-monthly. The subscription rates for 1990 are, for each one: £99.50 (UK), £119.00 (overseas) and US\$198.00 (USA & Canada) post free.

*Subscriptions and free specimen copies are available from:*

### JOURNAL OF APPLIED ECOLOGY

Edited by W.C. Block, J. Miles and N.R. Webb

The journal publishes the results of original research in which ecological ideas and methods are applied to the study, conservation, management, control, development and use of natural resources in the widest sense. The editors select for publication only material of the highest scientific standards and this policy has attracted contributions by the world's leading authorities.

### FUNCTIONAL ECOLOGY

Edited by P. Calow and J. Grace

*Functional Ecology* publishes short, original papers in a wide range of ecological topics, but particularly emphasizing the fields of physiological, biophysical and evolutionary ecology. Papers may describe experimental, observational or theoretical studies on terrestrial, freshwater or marine systems. The Editors are especially keen to publish papers that blend between these subject areas. Work that is purely descriptive and/or concerned exclusively and specifically with the population dynamics of organisms will not be accepted unless it sheds light on those specific areas mentioned above.

*Cover:* The photograph on the outside of the cover was taken by David Nicholson at Pedney Beach, Cornwall.

*Inside covers:* Photographs of echinoderm larvae by Douglas P. Wilson.

*Inside front cover:* left, auricula of the sea cucumber *Labidoplax digitata* (Montagu) (ventral view, height 1.4 mm); right, ophiopluteus of the brittle-star *Ophiocomina nigra* (Abildgaard).

*Inside back cover:* brachiolaria of the starfish *Asterias rubens* L. Left, lateral view; right, ventral view (height 3.5 mm).
