Of the Causes of Improvement in the productive Powers of Labour, and of the Order according to which its Produce is naturally distributed among the different Ranks of the People

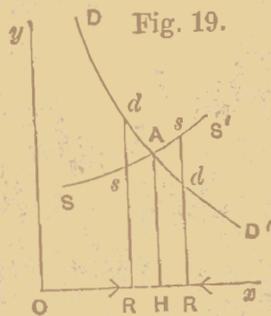

The greatest "improvement" in the productive powers of labour, and a greater than  $R_s$  the supply price, the production is profitable, and will be increased.  $R$ , the amount—may call it, will move to the right. On the other hand is, if  $R$  is vertically under a point of intersection of the curves, demand and supply are in equilibrium.

the person holding the string swings his hand in a very rhythmical and partly arbitrary, the illustration will show the difficulties of some very real and practical problems. For indeed the demand and supply schedules do not

V. I. 1. To represent the equilibrium of demand and supply geometrically draw the demand and supply curves together as in Fig. 19. If then the rate at which production is being actually carried on, and  $R_d$  the price greater than  $R_s$  the supply price, the production is profitable, and will be increased.  $R$ , the amount—may call it, will move to the right. On the other hand is, if  $R$  is vertically under a point of intersection of the curves, demand and supply are in equilibrium. We take as the typical diagram for stable equilibrium a commodity that obeys the law of diminishing returns. If we had made  $SS'$  a horizontal straight line, we presented the case of "constant return," in which the return is the same for all amounts of the commodity. If  $SS'$  inclined negatively, but less steeply than  $DD'$  (we should have said later on), we should have a stable equilibrium for a commodity which obeys the law of increasing returns. In this case the above reasoning remains unchanged without the alteration of a letter; but the last case introduces difficulties which we have arranged

may happen they have and commodities are not satisfied with Of course and Non-influences of which persist and Non-broadened § 7. with in
