Prepaid Annual Subscription, 30s. (8 dollars) post free.

Single Copies, Three Shillings.

ENTERED AT STATIONERS' HALL.

“We have experimentally proved that Listerine is a powerful antiseptic, preventing the development of bacteria and decomposition of vegetable infusions.”—*British Medical Journal*, May 3, 1890.

LISTERINE

*A safe, non-poisonous, unirritating
antiseptic solution*

LISTERINE is particularly useful in the treatment of abnormal conditions of the mucosa, and admirably suited for a wash, gargle, or douche, in catarrhal conditions of the nose and throat.

LISTERINE in proper dilution may be freely and continuously used without prejudicial effect, either by injection or spray, in all the natural cavities of the body.

LISTERINE embodies a two-fold antiseptic effect, in that after the evaporation of its volatile constituents—thyme, eucalyptus, mentha, gaultheria, and ethyl alcohol—a film of boracic and benzoic acids remains upon the surface to which Listerine has been applied, affording more prolonged antiseptic protection.

LISTERINE is a trustworthy surgical dressing; it has no injurious effect upon the tissues in which the healing process is going on.

LISTERINE in teaspoonful doses will often afford relief in fermentative dyspepsia, and is largely prescribed, with excellent results, in the various forms of diarrhœa occurring in infants and adults.

LISTERINE literature, including special pamphlets upon *Respiratory Diseases*, may be had, by physicians, upon application to

Immunisation against Hay Fever.

THE DEPARTMENT FOR THERAPEUTIC INOCULATION, ST. MARY'S HOSPITAL, LONDON, W., prepares for supply to the Medical Profession through the agency of Messrs. Parke, Davis & Co.

"POLLACCINE" (POLLEN VACCINE FOR HAY FEVER)

to be administered subcutaneously for the production of immunity to pollen toxin, BOTH AS A PROPHYLACTIC AND CURATIVE OF HAY FEVER.

A HAY FEVER REACTION OUTFIT

is also supplied, which affords a means of determining

- (a) whether a patient is susceptible to pollen toxin,
- (b) the degree of such susceptibility,
- (c) the dosage of "Pollaccine" suited to any case.

N.B.—The winter and early spring are the best seasons for administering prophylactic injections.

Further particulars will be supplied on request by

PARKE, DAVIS & CO., 50-54, Beak St.,
Regent St., LONDON, W.1.

Telegraphic and Cable Address: "Cascara, London." Telephones: Regent 3260 (six lines).

THE COMMITTEE OF THE LIVERPOOL EYE AND EAR INFIRMARY have Vacancies for the posts of HONORARY ASSISTANT SURGEONS to their EYE DEPARTMENT and EAR DEPARTMENT. Persons with a knowledge of work in either subject essential. Applications with testimonials to be sent to CHARLES W. WRIGHT, Hon. Secretary, 17, Water Street, Liverpool, by the 1st April, 1919.

SCHOOL HYGIENE.

Published under the auspices of

The Medical Officers of Schools Association.

QUARTERLY. ANN. SUB. 4/6 post free.

-

THIS year's volume aims, like its predecessors, to be a faithful reflex of current Medical and Surgical thought. It is, therefore, of necessity coloured by the consideration of the many new problems which are thrust upon us by the War. These problems will confront the general Practitioner on every hand, and he must be prepared to deal with them.

Hence the current volume has a unique value, in that it furnishes the reader with a careful review of the latest achievements in War Surgery and Medicine, which will be of value now and in the years to come, and which cannot be obtained from any other source.

The civil side of the Practitioner's work has, of course, not been neglected.

The new "Annual" continues to be, as in the past, a digest of the best modern teaching culled by experts from the medical literature of the world.
