## INSTRUCTION TO CONTRIBUTORS

The *Journal of Helminthology* publishes papers on all aspects of animal parasitic helminths, particularly those of medical or veterinary importance, but only in exceptional circumstances will systematic or taxonomic studies be acceptable.

Manuscripts, which must be in English or French (with an English summary), should be addressed to:

The Editor, *Journal of Helminthology*,  
London School of Hygiene and Tropical Medicine,  
Winches Farm Field Station,  
395 Hatfield Road,  
St Albans, Herts AL4 0XQ,  
England.

Two copies of a typescript, on size A4 paper with double spacing, should be submitted. Papers should be preceded by a short abstract and will normally have the following sections: brief Introduction; Materials and Methods; Results; Discussion; Acknowledgements; References. However, the form of the paper may vary, depending on its subject matter; recent past issues should be consulted for a suitable form. Research Notes should also be preceded by a brief abstract. Illustrations should be drawn in Indian ink, preferably not more than double the final size. Care should be taken that all illustrations fit into the format of the *Journal*. The maximum size an illustration will be printed is 12.0 × 20.0 cm. Where many separate drawings are made, some indication of how they may be grouped to make a corporate plate without undue wastage of space, should be indicated. Some indication of scale (preferably a scale bar) should normally be given on the figure. Photocopies of illustrations should be enclosed for refereeing purposes. Lettering and numbering, which must be of a high standard, should be added by the author, with due regard for subsequent reduction.

Photographs should be glossy prints of the same size as they are to appear in the *Journal* (maximum size 12.0 × 20.0 cm). Composite prints must be mounted and can have the separate photographs abutting; they will then have a separating line inserted by the printers. All figures and letters on photographs must be inserted by the author.

Information should not be repeated in the text and in tables or figures. The legends to tables and to figures should be sufficiently detailed for the information to be understood without reference to the text.

References should be given in alphabetical order with the full title of the journal. The following are examples:

DUKE, B. O. L. (1971) The ecology of onchocerciasis in man and animals. In: *Ecology and Physiology of parasites* (editor, A. M. Fallis) pp. 213–222. Adam Hilger Ltd.: London.

JAMES, C. & WEBBE, G. (1973) A comparison of Egyptian and East African strains of *Schistosoma haematobium*. *Journal of Helminthology*, **47**, 49–59.

25 offprints are provided free of charge; additional copies may be ordered at the proof stage.

# Contents

	Pages
Some properties of the surface of nematode larvae. (Research Note). MICHELE JUNGERY, C. D. MACKENZIE and BRIDGET M. OGILVIE	291-295
Studies on the cryopreservation of eggs of <i>Angiostrongylus cantonensis</i> . SHOJI UGA, KAZUYOSHI ARAKI, TAKEO MATSUMURA and NOBORU IWAMURA	297-303
The use of lyophilized <i>Schistosoma mansoni</i> eggs as antigenic particles in a radioimmunoassay. J. HAMBURGER, H. MOSCOVICI and S. LUSTIGMAN	305-312
Monoamine oxidase in adult <i>Ascaridia galli</i> . S. K. MISHRA, RAMANUJ SEN and S. GHATAK	313-318
Cryopreservation of <i>Dirofilaria immitis</i> microfilariae and third-stage larvae. (Research Note). J. B. LOK, M. MIKA-GRIEVE and R. B. GRIEVE	319-324
<i>Oesophagostomum columbianum</i> : gamma-irradiated third-stage larvae for immunization in lambs. R. L. SHARMA and D. N. DHAR	325-330
Description of musculature differences in spargana of <i>Spirometra</i> (Cestoda; Pseudophyllidea) and tetrathyridia of <i>Mesocestoides</i> (Cestoda; Cyclophyllidea) and their value in identification. (Research Note). KARIN I. ANDERSEN	331-334
Uptake of adenosine 3',5'-cyclic monophosphate and isoproterenol by filarial parasites. KHALID MASOOD, V. M. L. SRIVASTAVA, D. P. SINGH, R. K. CHATTERJEE and A. B. SEN	335-338
Surface morphology of <i>Gastrodiscoides hominis</i> Lewis & McConnell, 1876) Leiper, 1913 (Trematoda: Digenea) as revealed by scanning electron microscopy. VEENA TANDON and S. C. MAITRA	339-342
<i>Nematospiroides dubius</i> : factors affecting the primary response to SRBC in infected mice. NAJAH M. H. ALI and JERZY M. BEHNKE	343-353
<i>Onchocerca raillieti</i> : adult location and skin distribution of the microfilaria in Sudanese donkeys. SAAD E. EL SAMMANI and HUSSEIN S. HUSSEIN	355-360
Subject Index	361
Author Index	364
Contents of Volume	i-iii
