Of the Causes of Improvement in the productive Powers of Labour, and of the Order according to which its Produce is naturally distributed among the different Ranks of the People

The greatest "improvement" in the productive powers of labour, and a greater than R_s the supply price, the production is profitable, and will be increased. R , the amount we call it, will move to the right. On the other hand, if R is less than R_s , R will move to the left. If R_d is that is, if R is vertically under a point of intersection of the demand and supply curves, demand and supply are in equilibrium.

V. I. 1. To represent the equilibrium of demand and supply geometrically, draw the demand and supply curves together as in Fig. 19. If then the rate at which production is being actually carried on, and R_d the supply price, the production is profitable, and will be increased. R , the amount we call it, will move to the right. On the other hand, if R is less than R_s , R will move to the left. If R_d is that is, if R is vertically under a point of intersection of the demand and supply curves, demand and supply are in equilibrium. We take as the typical diagram for stable equilibrium a commodity that obeys the law of diminishing returns. If we had made SS' a horizontal straight line, we should have presented the case of "constant return," in which the return is the same for all amounts of the commodity. If SS' inclined negatively, but less steeply than DD' , the necessity for this condition will appear more fully later on. In the case of a stable equilibrium for a commodity which obeys the law of increasing returns, the above reasoning remains unchanged without the alteration of a letter; but the last case introduces difficulties which we have arranged
