

Notes for contributors

A submission to Applied Probability is considered as a submission to either *Journal of Applied Probability* (JAP) or *Advances in Applied Probability* (AAP). Longer papers are typically published in AAP, but the assignment of papers between the two journals is made by the Executive Editor on an issue-by-issue basis. Short communications and letters specifically relating to papers appearing in either JAP or AAP are published in JAP.

Papers submitted to the Applied Probability journals are considered on the understanding that they have not been published previously and are not under consideration by another publication. Accepted papers will not be published elsewhere without the written permission of the Trust. Submitted papers should be in English. It is the author's responsibility to ensure an acceptable standard of language, and a paper failing to meet this requirement may go back to the author for rewriting before being sent out for review.

Papers should include: (i) a **short abstract** of 4–10 lines giving a non-mathematical description of the subject matter and results; (ii) a list of **keywords** detailing the contents; and (iii) a list of **classifications**, using the 2010 Mathematics Subject Classification scheme (<http://www.ams.org/msc/>). Letters to the Editor need not include these. To assist authors in writing papers in the Applied Probability style, they may use the L^AT_EX class file `aptpub.cls`, available from <http://www.appliedprobability.org/>. Use of this class file is not a condition of submission, but will considerably increase the speed at which papers are processed.

Papers should be submitted electronically through ScholarOne at <https://mc.manuscriptcentral.com/apjournals>. All submissions will be acknowledged on receipt.

Copyright

The copyright of all published papers is vested in the Applied Probability Trust. When a paper is accepted for publication, the Trust asks the authors to assign copyright by signing a form in which the terms of copyright are listed. Failure to do this promptly may delay or prevent publication.

Authorisation to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by the Applied Probability Trust for libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the corresponding processing and royalty fees (see <http://www.copyright.com>) are paid directly to CCC, 222 Rosewood Drive, Danvers, MA 01923, USA. 0021–9002/19

Volume 55 Number 4

Original Articles

- 1085 YINPING YOU, XIAOHU LI AND XIAOQIN LI. Stochastic comparison on active redundancy allocation to K -out-of- N systems with statistically dependent component and redundancy lifetimes
- 1116 JINZHU LI. Asymptotic results on tail moment and tail central moment for dependent risks
- 1144 STATHIS CHADJICONSTANTINIDIS AND SERKAN ERYILMAZ. Distributions of random variables involved in discrete censored δ -shock models
- 1171 LAURE COUTIN AND MONIQUE PONTIER. PDE for the joint law of the pair of a continuous diffusion and its running maximum
- 1211 FRANÇOIS CARON, FRANCESCA PANERO AND JUDITH ROUSSEAU. On sparsity, power-law, and clustering properties of graphex processes
- 1254 VICTOR FALGAS-RAVRY AND AMITES SARKAR. Bootstrap percolation in random geometric graphs
- 1301 DONALD A. DAWSON, AHMED SID-ALI AND YIQIANG Q. ZHAO. Propagation of chaos and large deviations in mean-field models with jumps on block-structured networks
- 1362 JORGE IGNACIO GONZÁLEZ CÁZARES AND ALEKSANDAR MIJATOVIĆ. A monte carlo algorithm for the extrema of tempered stable processes
- 1390 SATOSHI KURIKI AND TAKAHIKO MATSUBARA. Asymptotic expansion of the expected Minkowski functional for isotropic central limit random fields
- 1415 PAUL JUNG, HOIL LEE, JIHO LEE AND HONGSEOK YANG. α -stable convergence of heavy-/light-tailed infinitely wide neural networks
- 1442 JULIA EISENBERG AND PAUL KRÜHNER. Measuring the suboptimality of dividend controls in a Brownian risk model

Corrigendum

- 1473 NIMA AKBARZADEH AND ADITYA MAHAJAN. Conditions for indexability of restless bandits and an $O(K^3)$ algorithm to compute whittle index – corrigendum
