INDEX FOR VOLUME 174

	PAGE
Adachi, T., Enomoto, H. & Tsukamoto, M. Intervals of s -torsion pairs in extriangulated categories with negative first extensions	451
Aougab, T. & Gaster, J. Curves on the torus intersecting at most k times	569
Barnes, D. & Sugrue, D. The equivalence between rational G -sheaves and rational G -Mackey functors for profinite G	345
Beckwith, O., Liu, D., Thorner, J. & Zaharescu, A. A zero density estimate and fractional imaginary parts of zeros for GL_2 L -functions	605
Bellettini, G., Paolini, G., Paolini, M. & Wang, Y.-S. A table of n -component handlebody links of genus $n + 1$ up to six crossings	199
Blanc, J., Cheltsov, I., Duncan, A. & Prokhorov, Y. Finite quasisimple groups acting on rationally connected threefolds	531
Bonatto, L.B. Decoupling Decorations on Moduli Spaces of Manifolds	163
Bucić, M., Janzer, O. & Sudakov, B. Counting H -free orientations of graphs	79
Campagna, F. Effective bounds on differences of singular moduli that are S -units	415
Cazzaniga, A., Ralaivaosona, D. & Ricolfi, A.T. Higher rank motivic Donaldson–Thomas invariants of \mathbb{A}^3 via wall-crossing, and asymptotics	97
Comdühr, P., Evdoridou, V. & Sixsmith, D.J. Dynamics of generalised exponential maps	123
Cumplido, M., Martin, A. & Vaskou, N. Parabolic subgroups of large-type Artin groups	393
Dergacheva, N.S. & Klyachko, A.A. Small non-Leighton two-complexes	385
Evans, N. Correlations of almost primes	301
Ferber, A., Jain, V., Sah, A. & Sawhney, M. Random symmetric matrices: rank distribution and irreducibility of the characteristic polynomial	233
Fidelis, C. & Koshlukov, P. \mathbb{Z} -graded identities of the Lie algebras U_1 in characteristic 2	49
Jaipong, P., Lang, M.L., Tan, S.P. & Tee, M.H. Dilogarithm identities after Bridgeman	1
Jeffries, J., Nakajima, Y., Smirnov, I., Watanabe, K.-I. & Yoshida, K.-I. Lower bounds on Hilbert–Kunz multiplicities and maximal F -signatures	247
Kala, V. Number fields without universal quadratic forms of small rank exist in most degrees	225
Kammeyer, H. & Kionke, S. On the profinite rigidity of lattices in higher rank Lie groups	369
Lodha, Y. & Zaremsky, M.C.B. The BNSR-invariants of the Lodha–Moore groups, and an exotic simple group of type F_∞	25
Matkovič, I. Fillability of small Seifert fibered spaces	585
Moreno, A. Pseudo-holomorphic dynamics in the restricted three-body problem	663
Oliver, R.J.L., Shrestha, S.T. & Thorne, F. Asymptotic identities for additive convolutions of sums of divisors	59
Pardo-Simón, L. Topological dynamics of cosine maps	497
Sahay, A. Moments of the Hurwitz zeta function on the critical line	631
Schürmann, J. & Wulkenhaar, R. An algebraic approach to a quartic analogue of the Kontsevich model	471
Sugawa, T., Vuorinen, M. & Zhang, T. Conformally invariant complete metrics	273
Volkov, Y. Groups generated by two twists along spherical sequences	137

INSTRUCTIONS TO AUTHORS

1. Preparation of Manuscripts

A paper should be submitted electronically to mpeditor@hermes.cam.ac.uk in pdf form only. Authors are encouraged to prepare their manuscripts in LaTeX 2_ε using the PSP class file. The class file, together with a guide, `PSP2egui.tex`, and sample pages, `PSP2esam.tex`, can be downloaded from <ftp://ftp.cambridge.org/pub/texarchive/journals/latex/psps> in either packed or unpacked form. These files will be updated periodically; please ensure that you have the latest version.

A cover page should give the title, the author's name and institution, with the address to which mail should be sent.

The title, while brief, must be informative (e.g. *A new proof of the prime-number theorem*, whereas, *Some applications of a theorem of G. H. Hardy* would be useless).

Authors are asked to provide an abstract as a basis for search on the Web. This may be an explicit abstract at the start of the paper. Otherwise the first paragraph or two should form a summary of the main theme of the paper, providing an abstract intelligible to mathematicians. Please note that the abstract should be able to be read independently of the main text. References should therefore not be included in the abstract.

Authors are encouraged to check that where references are given, they are used in the text. Experience has shown that unused references have a habit of surviving into the final version of the manuscript.

For a typescript to be accepted for publication, it must accord with the standard requirements of publishers, and be presented in a form in which the author's intentions regarding symbols etc. are clear to a printer (who is not a mathematician). Please also check the Cambridge University Press website for information about the style in which the paper should be submitted.

2. Notation

Notation should be chosen carefully so that mathematical operations are expressed with all possible neatness, to lighten the task of the compositor and to reduce the chance of error. For instance n sub k is common usage, but avoid if possible using c sub n sub k . Fractions are generally best expressed by a solidus. Complicated exponentials like:

$$\exp\{z^2 \sin \theta / (1 + y^2)\}$$

should be shown in this and no other way.

It helps if displayed equations or statements which will be quoted later are numbered in order on the right of their line. They can then be referred to by, for example 'from (7)'.
The author must enable the printer (if necessary by pencilled notes in the margin) to distinguish between similar symbols such as o , O , o , O , 0 ; x , X , \times ; ϕ , Φ , \emptyset ; l , 1 ; e , k , κ , k .

Footnotes should be avoided.

Please use typewriter font for all addresses and email addresses.

Omit * from the end of proofs.

In listing assertions, conclusions, etc. do not use a vertical column of dots and do not follow (a) or (i) by a capital letter (eg. (i) the absolute value . . .)

In making references precise use [3, theorem 5.1]

3. Diagrams

Diagrams should be in black ink or from a high-quality laser printer and should not be larger than 30 cm by 45 cm. Lettering to be inserted by the printer should be shown clearly on copies of the figures rather than on the original drawings. Please note that a charge may be made if hand-drawn diagrams need to be re-drawn for publication.

Figure 1 here

A typed list of captions may be provided at the end of the manuscript in the following format:

Figure 1. *A basis for ...*

Note that there is no point at the end of the heading. All headings should be centred.

4. Tables

Tables should be numbered (above the table) and set out on separate sheets. Indicate the position of each in the text as for figures:

Table 3 here

Heading for tables should be shown in the following way:

Table 1. *A basis for ...*

Note that there is no point at the end of the heading. All headings should be centred over columns.

5. References

References should be collected at the end of the paper numbered in alphabetical order of the authors' names. Where references are given, they should be used in the text. Titles of journals should be abbreviated as in *Mathematical Reviews*. The following examples show the preferred style for references to a paper in a journal, a paper in a proceedings volume, a book and an unpublished dissertation:

- [1] J. F. ADAMS. On the non-existence of elements of Hopf invariant one. *Ann of Math.* (2) **72** (1960), 20-104.
- [2] M. P. FOURAM and D. S. SCOTT. Sheaves and logic. In *Applications of Sheaves* Lecture Notes in Math. vol. 753 (Springer-Verlag, 1979), pp. 302-401.
- [3] P. T. JOHNSTONE. *Stone Spaces*. Cambridge Studies in Advanced Math. no. 3 (Cambridge University Press, 1982).
- [4] F. W. LAWVERE. Functional semantics of algebraic theories. Ph.D. thesis. Columbia University (1963).

6. Submission of papers accepted for publication

When a paper has been accepted for publication the relevant TeX files of the final version, accompanied by a pdf file, should be sent to the Editor by e-mail.

This journal issue has been printed on FSC™-certified paper and cover board. FSC is an independent, non-governmental, not-for-profit organization established to promote the responsible management of the world's forests. Please see www.fsc.org for information.

MATHEMATICAL PROCEEDINGS

*of the
Cambridge Philosophical Society*

VOLUME 174 PART 3, pages 451–693, May 2023

CONTENTS

TAKAHIDE ADACHI, HARUHISA ENOMOTO & MAYU TSUKAMOTO Intervals of s -torsion pairs in extriangulated categories with negative first extensions	451
JÖRG SCHÜRMAN & RAIMAR WULKENHAAR An algebraic approach to a quartic analogue of the Kontsevich model	471
LETICIA PARDO-SIMÓN Topological dynamics of cosine maps	497
JÉRÉMY BLANC, IVAN CHELTSOV, ALEXANDER DUNCAN & YURI PROKHOROV Finite quasisimple groups acting on rationally connected threefolds	531
TARIK AOUGAB & JONAH GASTER Curves on the torus intersecting at most k times	569
IRENA MATKOVIČ Fillability of small Seifert fibered spaces	585
OLIVIA BECKWITH, DI LIU, JESSE THORNER & ALEXANDRU ZAHARESCU A zero density estimate and fractional imaginary parts of zeros for GL_2 L -functions	605
ANURAG SAHAY Moments of the Hurwitz zeta function on the critical line	631
AGUSTIN MORENO Pseudo-holomorphic dynamics in the restricted three-body problem	663
